# HYDROTURF SYSTEM

The Hydroturf System has several advantages over other types of automatic irrigation controls:

- Provides complete adjustability of the upper and lower saturation levels within each watering zone.
- Saturation level can be read with an analog meter at any time.
- Highly accurate linear sensitivity to changes in saturation levels.
- Instantaneous response to saturation level changes.
- Not affected by temperature, salts or fertilizers.
- Can be used with any time clock or operate on a continuous 24 VAC supply.
- No need for any service or maintenance such as water filling, calibration, etc.
- Provides an override switch to allow for extra watering after fertilization or during hot weather.
- Can be installed and adjusted without power from the clock

## PRODUCT UPDATE

### PENDULUM SPREADER

A wide assortment of materials can be spread by Olathe's Model 45 pendulum-action spreader. This type of spreading device has been designed for applying sand topdressing and granular products to large

turf areas.

The Model 45 is available with an engine and/or trailer for versatility.
