## PRODUCT UPDATE

### WALKING BOOM SPRAYER

Sports turf managers using FMC's walking boom can accurately spray up to an 80-inch swath of fertilizers or pesticides in compaction-prone turf areas. Connected to a spray unit by a hose, the walking boom provides the precise spray coverage of a boom sprayer without the weight of the tank, pump or turf vehicle.

Eight drip-free check nozzles are spaced ten inches apart along a PVC boom rated to withstand up to 600 psi. A heavy-duty trigger cut-off is located conveniently on the handle. High-flotation tires ride freely on ball

bearings attached to a continuous-length axle.

The pressurized spray from the nozzles penetrates deeply into tall grass or foliage. Large areas can be sprayed accurately in a relatively short period of time.

### HONDA ENGINE OPTION

Locke walk-behind reel mowers are now available with lightweight, fuel-efficient Honda engines. The low-profile engines can be mounted closer to the rollers, thus improving weight distribution and traction while minimizing vibration.

The optional 8hp or 5hp engines automatically shut off when oil reaches an un-

safe operating level. They also feature overhead valves and electronic ignition.

Locke mowers will continue to have Briggs & Stratton engines as standard equipment. A sulky to convert the walk-behind mowers for riding is optional.
