LIQUID FERTILIZER

Doggett Corporation has introduced a fertilizer for low-volume liquid application that contains four forms of nitrogen, calcium and iron for turf. Total fertilizer has a low salt index and a low burn potential.

The fertilizer contains nitrate, ammonium and urea nitrogen for rapid uptake as well as ureaform nitrogen for controlled-release. The addition of calcium improves nitrogen absorption and greatly reduces loss of ammonia by volatilization. A high percentage of chelated nitrogen promotes deep color and promotes formation of chlorophyll.

The highly-concentrated formula is soluble in water for liquid application.

MULTI-SPORT SCOREBOARD

One MP-2455 scoreboard from All American is all you need for football, soccer, lacrosse and outdoor hockey. A single membrane keyboard operates the solid-state scoring system for all four sports.

Scores and time are illuminated in 18-inch-high characters on the board which is eight

feet wide and five feet high. The time can be reported either as elapsed time or remaining time from 0 to 59:59. Scoring ranges from 0 to 99 for home and guest. Four period markers are located on the bottom center of the board.

LIGHT FIVE-GANG FAIRWAY MOWER

Jacobsen has added two more gangs to light-weight fairway mowing with its LF-100 five-gang reel mower. The unit offers precision mowing and low ground pressure previously available only on triplex greens mowers. It cuts a 100 inch swath at speeds up to five mph for higher productivity than triplex mowers.

A new mower configuration puts the two outside reels in front of the operator so the trimming edge can be seen without looking back. This gives better control of overlap and provides a shorter uncut circle of grass on turns. Grass catcher removal and reel maintenance is also simplified as a result. All reels are full floating.

A 22 hp liquid-cooled diesel engine powers the LF-100. All five reels are hydraulically lifted quickly with the touch of a foot pedal. Two-wheel power steering and four-wheel wide-track stance make it easier to hold a straight line for accurate striping of fairways and athletic fields.

COMBINATION PLANE

Cultivating and grading tight corners of fields, slopes and contoured areas are easier with the shorter, more maneuverable MT/583 ComboPlane from MetroTurf, Inc. The new model is a shortened version of the com-

pany's proven MT/780 series.

The completely hydraulic unit scrapes, scarifies, planes and pulverizes soil or basepath mix in one pass. The leading edge of the unit is a scraper which eliminates bumps and provides a smooth, even grade. Variable-depth scarifiers then break up heavily compacted soils and soil layers. Two planing beams distribute the loosened soil and fill in depressions. Finally, a pulverizing roller crushes lumps and leaves a loose, open surface for seeding or sodding, race tracks or skinned areas.

All critical wear parts of the 78-inch-wide unit are made of abrasion-resistant steel. Any tractor with category I or II three-point hitch and hydraulic system can operate the ComboPlane.

METROTURF, INC.

LIQUID FUNGICIDE

Control of major turf diseases is now possible without the dust and mess of tank mixing dry fungicide formulations. Rubigan AS is a liquid form of fenarimol, the only fungicide registered for control of all the patch diseases including Fusarium blight, necrotic ring spot, summer patch, take-all patch and spring dead spot. It also controls dollar spot and reduces *Poa annua* in overseeded bermudagrass.

Both cool- and warm-season grasses can be treated with Rubigan AS. Only small quantities are needed for treatment. Less than two ounces per 1,000 square feet will control heavy infestations of dollar spot for 14 to 28 days. Two half-gallon containers treat up to four acres.

Due to its locally systemic action, once it has dried, it can be washed off the foliage by rain or irrigation without losing effectiveness. Rubigan can be mixed with Daconil 2787 for control of large brown patch.

TEE SIGN ADVERTISING

Golf courses can save on the cost of high-quality, wood tee signs by participating in a national advertising program organized by Starstream Communications and True Distance Inc. Each sign features the layout of the particular hole and yardage on a carved, colorful wooden sign. A portion of the sign will carry a tastefully designed message for a national advertiser.

Courses participating in the program receive a significant discount on the signs. The two companies are expecting more than 100 courses to take part initially. A similar program for color score cards is also available.

True Distance has been supplying golf courses with custom signage and score cards for more than ten years. Starstream Communications specializes in promotional programs for some of the nation's largest national advertisers.

BROADLEAF HERBICIDE

Year-round control of broadleaf weeds in turf can be highly effective with Weedestroy Triamine and Tri-Ester from Riverdale Chemical Co. Both products include three different broadleaf herbicides to provide a high degree of control of dandelion, chickweed, plantain, oxalis, spurge and many other broadleaf weeds.

Triamine contains no dicamba for extra safety near desirable woody plants. Its dimethylamine salt formulation of 2,4-DP, 2,4-D and MCPP is concentrated so that

only three pints of Triamine are needed per acre per application.

Tri-Ester is an ester formulation of the three herbicides that tends to resist washing from the plant. It has greater herbicidal activity than the amine form to increase its effectiveness during cool, rainy weather.

CHELATED IRON

The color and root growth of sports turf can be improved quickly with Agri-Plex Fe, a highly-concentrated liquid form of chelated iron containing both phosphorus and potassium from RGB Labs. University tests have shown that the solution of eight percent iron chelate, five percent phosphoric acid and eight percent soluble potash increased rooting of Kentucky bluegrass sod by 44 percent after it was transplanted. Rooting speed is very important where damaged sports turf is resodded prior to major events.

Agri-Plex Fe is compatible with virtually all fertilizers (NPK) and pesticides for tank mixing due to a patented chelating agent. The solution has a strong buffering capacity making it safe for mixing with other pesticides and application during the heat of day. It will not stain equipment.

RGB recommends that a minimum of 0.1 pound of nitrogen per 1,000 square feet be mixed with the nutrient solution for maximum green-up. One gallon of Agri-Plex Fe

per acre has been shown to speed up sod production by as much as three months.

GROOMING REEL

The Toro Company has introduced a new grooming reel for its Greenmaster 3000 greens mower. The reel operates like a verticutter to limit thatch build-up and to remove runners. When used frequently at a light setting, the grooming reel promotes vertical and upright growth. The result is a more uniform playing surface.

Two models are available to accommodate a wide variety of growing conditions and customer needs. The blades are spaced 1/4-inch apart on the reel recommended for use during the spring and summer. A second reel with 3/4-inch blade spacing is suggested for late summer and fall. The depth penetration of both reels can be adjusted without tools.

The cutting unit suspension of the Greenmaster permits the grooming reel to ride independently of the collection baskets. It also allows the grooming reel to be raised or lowered for turns or stopping without affecting the depth setting.

LOW VOLTAGE LIGHTS

Barebo's high intensity, low-voltage lights are safe and durable either underwater or near water features. Designed primarily for the company's floating "fountain-like" aerators, the lights have a universal mounting bracket which allows them to be used in any type of fountain or pool and on docks, bridges or waterfalls.

The lights are low voltage but produce a high intensity of light. They can be adapted to provide colored light for dramatic effect to water or landscape features at night.

PRODUCT UPDATE

BATTER'S BOX

Surveys indicate that the batter's box is the top maintenance problem on baseball and softball fields. Players "dig-in" creating holes that must be filled, raked and tamped between games and sometimes innings.

The Groundskeeper from All-Pro Athletic Surfaces is a durable, soft rubber pad covered by En-Tous-Cas synthetic turf. The edges are tapered leaving no lip to interfere with sliding players. It resists deterioration by sun, foot traffic, water, pollution, rot or bacteria.

Once installed, the batters box is permanent and difficult for vandals to damage.

ALL-PRO ATHLETIC SURFACES, INC.

ANTI-DRIFT KIT

When a turf chemical is applied at the rate of a few ounces per 1,000 square feet, drift can make a difference in uniformity and control. To make its walking boom drift-free, Broyhill has developed a see-through anti-drift kit.

A custom-fitted heavy vinyl cover with velcro tabs attaches easily to mounting brackets on the sprayer. The applicator can see if a nozzle is blocked without removing the cover.

BROYHILL COMPANY

SMOOTH RAKE

The makers of the Smoothie sand rake believe that a golf ball is easier to hit out of a bunker when the sand is smooth than when furrowed by standard rakes. To provide a smooth surface the company designed a rake that removes footprints, club marks and debris from sand and leaves the trap as smooth as a sandy shoreline.

The polypropylene plastic rake head consists of 33 teeth in addition to a plane bar that levels the sand. Two levels of teeth act together to remove surface and subsurface rocks in the trap. The plane bar behind the teeth gives the sand its final smooth surface, all in one stroke.

The rake also removes rocks from the sand preventing them from being hit onto the greens where they can damage mowing equipment.

GRADE TRACTOR

Grading baseball infields, cart paths, parking areas and landscapes prior to planting or sodding is possible without hiring a grading firm with the Groundhog from Teledyne Princeton. The powerful, hydrostatic-drive tractor with its 60-inch hydraulically-controlled blade saves time and labor usually spent on hand raking.

The blade moves up or down at the touch of a finger. Large floatation tires and three-

wheel design allow the operator to grade within a one-half inch of any structure, wall, pipe or tree and turn within the length of the unit. Variable speed and reliable torque hubs provide the extra traction needed for grading work.

The Groundhog can be converted to a snow plow during the winter. Options include a diesel engine and four-way blade.

TELEDYNE PRINCETON

MULTI-PURPOSE SPADE

The flexibility of small tractors or loaders can be increased with the Dakota Hand transplanter frame by Mid-Dakota Corp. The unit's frame is adaptable in minutes to fit a tree spade, sprayer, hydraulic dump wagon, log splitter and post hole digger. A towable model is available for tractors with three-point hitches and a bucket-mount model can be attached to loaders.

The spade can dig and move root balls up to 28 inches in diameter. The towable frame features a self-contained engine and hydraulic system while the bucket-mount utilizes power from the loader to lift trees. A jack hammer is used to force the spades into the soil.

Attachments can turn the towable model into either a 15- or 30-foot wide boom sprayer, a 17 cubic foot hydraulic dump box, a log splitter or a post hole digger in minutes.

TRACTOR-MOUNTED SWEEPER

Turf tractors with 540 PTO and a three-point hitch can be put to work sweeping turf or pavement with the Sweepster RHFA. The unit windrows debris or snow outside the left or right rear tire with the tractor moving forward. A full 30 degree sweeping angle is provided with minimum vibration and maximum component life.

In addition to sweeping debris and snow from pavement, the sweepers are used to brush turf that has been trampled by wear, to remove paint from natural and artificial turf, and to remove thatch and debris from fields.

The RHFA features all metal shielding, chain and sprocket drive and heavy duty bearings. It can be attached or detached from the tractor in minutes. Since the sweeper works moving forward, the tractor operator has better control so he can sweep faster.

ROOT BARRIER FABRIC

Costly damage to cart paths, sidewalks, tracks and tennis courts by tree roots can be prevented with an easy-to-install geotextile barrier from Reemay Inc. Tyvar Biobarrier Root Control Fabric is a spunbonded polypropylene fabric impregnated with trifluralin, a root-inhibiting herbicide. Roots that contact the material stop growing without harm to the plant.

By combining trifluralin with polyethylene and carbon black, the active ingredient lasts

decades when buried in the soil on the fabric. Due to its very low solubility, the herbicide does not leach from its location on the fabric. Roots outside the treated zone continue to develop normally.

The Biobarrier can be installed in trenches around paths, tracks or courts or below

paved surfaces. The majority of tree roots are in the top 18 inches of soil. Unlike solid root barriers, the fabric can follow any contour or grade.
