## PRODUCT UPDATE

### TRACTOR-MOUNTED SWEEPER

Turf tractors with 540 PTO and a three-point hitch can be put to work sweeping turf or pavement with the Sweepster RHFA. The unit windrows debris or snow outside the left or right rear tire with the tractor moving forward. A full 30 degree sweeping angle is provided with minimum vibration and maximum component life.

In addition to sweeping debris and snow from pavement, the sweepers are used to brush turf that has been trampled by wear, to remove paint from natural and artificial turf, and to remove thatch and debris from fields.

The RHFA features all metal shielding, chain and sprocket drive and heavy duty bearings. It can be attached or detached from the tractor in minutes. Since the sweeper works moving forward, the tractor operator has better control so he can sweep faster.

### ROOT BARRIER FABRIC

Costly damage to cart paths, sidewalks, tracks and tennis courts by tree roots can be prevented with an easy-to-install geotextile barrier from Reemay Inc. Typar Biobarrier Root Control Fabric is a spunbonded polypropylene fabric impregnated with trifluralin, a root-inhibiting herbicide. Roots that contact the material stop growing without harm to the plant.

By combining trifluralin with polyethylene and carbon black, the active ingredient lasts

decades when buried in the soil on the fabric. Due to its very low solubility, the herbicide does not leach from its location on the fabric. Roots outside the treated zone continue to develop normally.

The Biobarrier can be installed in trenches around paths, tracks or courts or below

paved surfaces. The majority of tree roots are in the top 18 inches of soil. Unlike solid root barriers, the fabric can follow any contour or grade.
