FAIRWAY AERATOR

The Toro Company has introduced a fairway aerator that combines speed, depth, and durability in one machine for quality aeration of golf course fairways or other large turf areas.

The Model 09500 is over five feet wide and is capable of aerating up to 61,000 square feet per hour.

Coring depth can be adjusted up to five inches in depth with the two-tine head and up to three inches in depth with the six-tine head. Adjustment brackets on either side of

the unit allow for effective coring depth.

The aerator is towed behind most 35- to 45-hp tractors and is entirely gear driven. In addition, all gears are in sealed oil cases for added durability.

Coring head stands are standard on the fairway aerator, allowing for easy lock-up of the coring head for transport, when servicing, or when changing tines. Spring-loaded roller turf guards help keep turf in place and keep surface disruption to a minimum. Large flotation tires minimize compaction.

SELF-PROPELLED SEEDER/OVERSEEDER

The Brouwer Seeder/Overseeder is a self-propelled unit that is perfect for seeding, overseeding and fertilizing.

Its primary function is seeding, but the optional fertilizer hopper and overseeder attachments are quickly and easily fitted. It is powered by a Honda five-hp engine with

a heavy-duty chain and gear drive for excellent traction in a variety of conditions.

The gear-driven contra-rotating blades and guides place the seed precisely in adjustable-depth slits that are 1½ inches apart. The offset wheels then cover the seed for the best possible germination conditions. The operating width is 22 inches and the seed flow is calibrated for efficient distribution.

The operator control handle is quickly and easily folded away for transporting or storage. The seeder/overseeder is designed for small to medium size turf areas.

BUNKER AND FIELD RAKE

The three-wheel, self-propelled John Deere Model 1200 bunker and field rake provides traction and power for a variety of work on golf courses and athletic fields. The traction and power result from a variable-speed drive system.

The drive system combines a wet clutch, torque converter and transaxle that delivers a 164-to-1 gear ratio for enormous pushing and pulling power.

The wet clutch runs in oil for cool operation and quick response to the variable speed drive. The belt from the wet clutch to the torque converter is permanently engaged to prolong belt life. The transaxle provides differential lock for increased traction.

The unit is powered by a ten-hp Kawasaki engine. The four-cycle OHV power plant has full-pressure lubrication, oil filter, heavy-duty air cleaner and electric start.

Two foot pedals to the left of the steering pedestal control forward and reverse direction, and two pedals on the right engage the brake and throttle. Forward speed is

infinitely variable up to 11 mph.

High-flotation tires and a low operating weight of 450 pounds help reduce ground compaction. A six-to-one steering ratio and compact design give the model a turning radius of 12 inches (inside diameter).

A 78-inch-wide prong rake is standard equipment. Forward, aft, lateral and side-to-side floating action allows the rake to follow ground contours. Hardened metal prongs mix up sand or soil in front of the blades.

The prongs are threaded and adjustable up or down for lighter or more aggressive cultivation.

WATER VACUUM

The Hover Dry is a lightweight, portable, self-contained machine that removes surface water at a rate of up to 80 gallons per minute.

Built on the hovercraft principle, the unit supports itself on a cushion of air so that the machine does not come in contact with the surface. It is ideal for use on grass because it removes water without damaging the turf.

The vacuum can handle debris likely to be found on sports fields, such as grass clippings and small leaves. It is not designed to clear mud or larger pieces of debris.

The unit can be used on all sports fields and golf course greens, tees, fairways, light rough, and sand traps with a special attachment.

MOSS AND ALGAE HERBICIDE

Moss and algae can be selectively controlled in turfgrass and other areas with an herbicide from LESCO, Inc.

Moss & Algae Eraser is a quick-acting, natural fatty-acid herbicide that is registered for use on all turfgrasses. The product also eliminates moss and algae on roofs, sidewalks, decks, trees, growing containers and other surfaces.

Convenient and easy to use, the liquid concentrate can be applied with any type of sprayer. It is packaged in 2½-gallon containers.

PRODUCT UPDATE

FERTILIZER WITH GROWTH REGULATOR

A controlled-release fertilizer and growth regulator are combined in Scott's Fertilizer with TGR Poa Annua Control. The fertilizer reduces *Poa annua* populations in greens, fairways and tees of bentgrass, Kentucky bluegrass and perennial ryegrass.

Developed by O.M. Scott & Sons Company, the fertilizer selectively slows the growth of the *Poa*, thus diminishing its ability to compete against actively growing desirable grasses. This results in a gradual, more natural transition to desirable turf without a sudden decrease in playing surface quality.

The fertilizer is available in 31-3-9 and 15-0-29 formulations.
