HAND-HELD REMOTE CONTROL

The TRC Sidekick hand-held irrigation control unit works on any controller that operates 24 VAC valves. Its portable receiver plugs directly into permanent con-

troller connectors for maintenance operations. It remotely starts and stops systems to facilitate installation, inspection, repair, blowouts, aeration, and training.

GEOTEXTILES

Anti-Wash/Geojute and DeKowe geotextiles hold seed and soil in place during vegetation establishment. They contain no synthetic nettings and are completely biodegradable.

Anti-Wash/Geojute matting is a rugged woven fabric that absorbs almost five times its weight in water. It is easy to apply over any soil surface. Seeding can be performed either before or after application. The matting biodegrades after one or two growing seasons.

DeKowe is woven with yarns spun from the fibers of coconut husks. The fabric is extremely strong and durable, and can be used to stabilize waterways and steep slopes until the vegetation is hardy. This geotextile will biodegrade in four to ten years.

Softball and Baseball Field Maintenance and Safety

Now you can train your maintenance personnel to identify and correct hazardous conditions that may exist on your fields with this new VHS training program.

- Reduce player injuries
- Avoid potential lawsuits
- Save time and money
- Keep insurance costs down
- Train seasonal and full time personnel

This informative program covers the important aspects of preparing and maintaining the complete facility. From the inner playing surfaces, both skinned and turf, to the outlying fences,

lights, and bleachers, all the bases are covered. You'll also receive 24 pages of training support literature.

Make this convenient and reliable source for risk management part of your training solution.

PRODUCT UPDATE

KENTUCKY BLUEGRASS VARIETY

Alene, a Kentucky bluegrass variety, has a medium-dark genetic color and improved disease resistance. The grass normally germinates in seven to ten days. This rapid growth is particularly useful for renovation and erosion prevention. In 40 days after planting, Alene can be expected to produce 12 tillers for each seedling.

BENTGRASS SOD INFORMATION KIT

Growing high-quality bentgrass sod for golf greens is different than growing sod for other areas on the golf course. Production methods are unique. There are special requirements for drainage, root zone mixes, and other management techniques after the seed has emerged.

The kit deals with all aspects of high-quality bentgrass sod production, from developing a proper rootzone mix to harvesting and shipping. Superintendents with bentgrass nurseries will find the kit useful in many ways.

From Bucket Loader to Versatile Fork Lift in less Than 5 Minutes!

C.C. Bucket Forks can change a bucket-loader into a multi-purpose lifting vehicle. No drilling, welding or bolting.

**Easy-on, easy-off installation
-in less than 5 minutes.**

Made in the U.S.A. Canadian Patent No. 1,103,622
U.S. Patent No. 4,242,035

A NEW CONCEPT IN MATERIAL HANDLING!

CHECK THESE SPECIAL FEATURES!

- Easy storage—tines are separate and flat
- Transports easily—no awkward angles
- Easy to handle—each fork weighs only 50 pounds
- Universal—fits most popular brands of loader buckets
- Easy-on, easy-off installation—in less than 5 minutes!
- Ideal for farm use or at construction sites
- Handles most materials—load capacity is 3,000 pounds
- Full money back guarantee!

\$399.00

THREE-POINT HITCH ADAPTER FOR AERATOR

A three-point hitch adapter can be used with Feldmann's Model 2340-32 or Model 2340-48 core plug pull-behind aerators. Using a tractor's hydraulic power, it enables the aerator tines to be raised and lowered.

The sturdy adapter is constructed of rugged steel and bar stock. It is secured

with four bolts to the aerator frame and does not interfere when adding or removing weights to vary core penetration.

FELDMANN ENGINEERING & MFG.

FAIRWAY DRAG SYSTEM

With the Blue Mountain Fairway Drag System, grass can be cut, clumps broken up, and cuttings spread evenly in a single operation.

The system's unique sweeping action gently forces the blades of grass to stand up. This allows greater air circulation, which reduces the risk of dollar spot and other turf diseases, reduces thatch and matting, and creates a carpet-like appearance. The system will not scrape or gouge the turf.

GOLD MEDAL RECREATIONAL PRODUCTS

IRRIGATION PUMPING SYSTEMS

Preassembled Eagle Series Irrigation Pumping Systems combine motor power, pumping capacity, and PC-based controls for completely automated operation. The self-contained systems are designed for golf courses and other large turf areas.

Features include NEMA 3R-rated enclosures and UL-listed electrical systems. A programmable logic controller eliminates adjustments for routine operations and minimizes system downtime. An optional RS 232 port is available for on-line data communications to remote terminals or peripherals, including remote alarm connections.

PRODUCT UPDATE

LIQUID FUNGICIDES

Vorlan Flo and Fungo Flo are systemic turf fungicides in a safe, convenient liquid form. They provide excellent control of key ornamental and turf diseases, while their liquid formulation eliminates the risk of dust inhalation associated with traditional powder pesticides.

Vorlan Flo is safe on all turfgrasses. The product's unique chemistry makes it both a preventative and curative treatment. It provides up to 28 days of control of dollar spot, even resistant strains, as well as leaf spots, red thread, and pink snow mold. Each case of the product includes four one-gallon jugs.

Fungo Flo provides protection against most major turf diseases, including brown patch and fusarium blight (summer patch and necrotic ring spot). Systemic action provides effective disease control for up to 14 days. The product is available by the case in either two 2-1/2-gallon jugs or four one-gallon jugs.

GRACE-SIERRA

Circle 142 on Postage Free Card

SELF-CLEANING FILTERS

Amiad's line of automatic, electrically operated eight- to 14-inch filters is designed for golf course use. These extra heavy-duty filters protect valves and nozzles.

Filtration occurs when particles are trapped by the stainless-steel screen. Partial blockage causes a pressure differential between the filter inlet and outlet, activating the self-cleaning mechanism when the differential reaches four psi.

During the cleaning operation, a hydraulic valve automatically opens while revolving brushes dislodge the particles trapped

on the screen. They are flushed out through the open valve for 15 seconds without disrupting the continuous water flow through the filter.

The space-saving filters can handle up to 3,000 gpm each, with a maximum operating pressure of 150 psi. An unlimited number of filters can be operated in parallel to handle greater flows.
