LANDSCAPE POWER RAKE

The Harley Landscape Power Rake rakes, pulverizes, levels, dethatches, screens, and windrows all at the same time. It is well suited for site preparation and landscape jobs. It is designed to produce well screened, level surfaces with significantly reduced manpower.

Industrial strength components and simplicity of design permit maximum performance and minimum maintenance. The heart of the system consists of two power-rotated steel rollers mounted above each other and at an angle to the ground. The clockwise rotating bottom roller is built from six-inch, hollow, quarter-wall steel pipe with 3/4-inch steel bars securely welded to it. Rotation is into the grain of rough, packed ground.

The smooth top roller turns counter-clockwise to the bottom roller. It is height adjustable to permit screening of rocks and debris. Trash and rocks too large to pass between the rollers move at an angle to form a windrow, leaving the surface in ready-to-use condition. After a pass or two

the ground becomes soft and pliable. An auxiliary hydraulic cylinder adjusts depth.

Three models with raking widths of from six to 12 feet are currently 540 PTO-driven. However, prototypes are being developed to be operated by hydraulic pressure.

Power requirements range from 18 to 50 hp with hydraulics, depending on the model selected. All Harley Landscape Power Rakes have trailing gauge wheels to help stabilize, level, and fine finish.

TOP DRESSER

The Mete-R-Matic LA2 Large Area Top Dresser is a front-discharge top dresser. It works with all types of top dressing materials, wet or dry, and can be used with any standard 35 horsepower tractor.

It can top dress at speeds up to six mph and transport loads up to 20 mph. It provides uniform greens and quality application from 1/16-inch to 1/2-inch over a six-foot spread. The product has a two-cubic-yard capacity. Eight low-PSI independently-sprung tires evenly distribute weight on turf.

The product also features a low profile that lets operators see how much material is left in the hopper, which makes it easy to load and stable on slopes.

ATHLETIC FIELD LINE MARKER

Brite Striper 1500 rides on three large, fully pneumatic 10-inch wheels with ball bearings. The unit, which can stripe 100 linear feet per minute, features a seven-gal-

lon, stainless steel tank that reduces the number of days for refilling.

A heavy-gauge welded steel frame assures trouble-free operation. The striper is powered by a three-hp Briggs & Stratton engine for years of dependable service, and a Thomas diaphragm-type compressor.

A fully adjustable spray box and a 12-foot handhose with a wand are included as standard equipment.

HYDRAULIC FLUID HEATERS

In-tank hydraulic fluid heaters heat the fluid in cold weather to prevent damage from pump cavitation and eliminate costly downtime because of sluggish operation.

These fluid warmers circulate the engine's coolant through stainless steel tubing immersed in the fluid. This simple heat exchanger warms the hydraulic fluid for normal operation in cold conditions. An optional thermostat maintains proper fluid temperature.

The units are available in standard sizes for many tank configurations and custom designs for virtually any application.

ROOKIES

TURF HERBICIDE

Dimension turf herbicide has received full Environmental Protection Agency registration. The product promises to control crabgrass and other problem weeds and grasses in turfgrass.

The herbicide is designed for use by golf course superintendents to control weeds. Its active ingredient, dithiopyr, comes from a class of chemistry developed by the manufacturer which is characterized by desirable environmental features, including low use rates.

The herbicide offers both preemergence and early postemergence control of crabgrass, providing the widest possible application window available for controlling this significant pest. It also controls a broad spectrum of annual grasses and broadleaf weeds, including tough species such as goosegrass, foxtail, spurge, and oxalis.

It can be applied without fear of injury, and it will not harm ornamental plants adjacent to treatment areas.

LIGHTWEIGHT TURF CUTTER

Weighing only 170 lbs., the Pro Lite turf cutter can easily be lifted by two people. It is available with either a Briggs & Stratton I/C or Honda engine. A depth adjustment feature makes cut thickness variable to 1-1/2 inches. Worn or damaged tires can be replaced without replacing the whole wheel.
