SOIL AMENDMENT

Profile is a porous ceramic aggregate engineered from illite clay, formed through the accumulation of porous volcanic ash. The clay is sized, kiln baked and screened. The result is a very stable, highly porous aggregate that is the approximate size of a medium sand.

The honeycomb structure and moisture and oxygen exchange characteristics make it a unique material. Profile not only improves infiltration, but absorbs excess moisture, slowly releasing it again as the soil dries. As water is absorbed, oxygen is forced from the pore spaces, bathing the root zone with oxygen.

OVERSEEDER SHOE REPLACEMENT

Gandy Company introduces a shoe replacement assembly for its overseeder. Independent spring-loaded shoes follow in the slit created by the cutter blades, and adjust for mine changes in ground contour. Seed placement directly behind each shoe permits more seed—approximately 95 percent—to be placed directly into the slit for increased seed-to-soil contact.

MARKING PAINT

Pro-Stripe is for laying down lines or other markings on all types of athletic fields, football fields, soccer fields, volleyball

courts, golf courses and similar sports areas. It can also be used to line parking lots and curbs of concrete or asphalt.

MULTI-PURPOSE FIELD GROOMER

The Athletic Field Maintainer stripes, sprays and grooms. The machine can stripe several football fields without the need to refill, and also can level and groom athletic fields with a heavy-duty harrow and broom or dragmat. In addition, the unit can spray chemicals for weed- and insect control, and pull a utility trailer or other accessories.

Water Reels

Kifco has introduced two models to their popular line of Water-Reels. The new B110 and B180 extend the product line to ensure there is a Water-Reel to fit your needs. Machines are compact, easy to use, operate unattended, and shut off automatically. They are suitable for all types of sports turf and are easily transported from one area to another. Water-Reels combine outstanding features that come from more than 25 years of traveling sprinkler engineering.

FIELD SURFACE REINFORCEMENT

Manufactured of engineered polypropylene fiber in fibrillated form—bundles of interconnected strands—patented Turfgrids combine with native or select soils to produce a toughened composite athletic surface with increased traction in both saturated and unsaturated conditions. Applications include athletic playing fields and other hard-usage turf areas. Turfgrids can be used in new construction or in the maintenance of damaged surfaces.

When mixed with soils, the bundle matrices open and interlock with soil grains to produce a created-in-place soil/fiber composite.

LARGE-AREA LIGHTING

The New MSL Series of Magnuspec™ Architectural Cutoff family from Hubbell Lighting provides uniform, energy-efficient lighting for large open areas such as parks and sports complexes with a minimum number of luminaires.

Available with 1,000-watt metal halide or 600-watt High Pressure Sodium lamps, the MSL Series Magnuspec offers several advanced features unique to Hubbell fixtures. These include 30,000-hour rated lamp life, a 92,000 lumen output, hot restrike and four photometric distributions.

The MSL Series is available in either arm mount or post top yoke styles for maximum design flexibility.
