

ROOKIES

Zero-Turn Mower

A new zero-turn rotary mower with a 25 hp engine was recently introduced by The Bunton Co. The new model complements the 20 hp model that was introduced in 1993.

The Kohler engines incorporate an oil cooler to enhance performance and

longevity. With the additional power, the units will be able to handle 60-inch cutter decks and grass-collection systems.

The Louisville, KY-based company has produced commercial lawn mowers since the early 1950s.

It's a Screen

The Shaker Buddy Mixer™ is a portable, one-man screening plant that provides quality at an affordable price. Most customers have realized a total payback in fewer than 2,500 yards of top-soil production. The reason is because the mixer is compact — one person can tow it to the job site on a one-ton truck, set it up in two minutes and change the screen in about 10 minutes with hand tools. It processes a yard of material in 20 seconds. The loading height of 6 feet accommodates all skid steers, backhoes, excavators or small-tractor loaders. A Kubota engine supplies its power.

Line Paint

It is an easy-flowing, ready-to-use line paint that gives bright white and longer-lasting lines on all turf surfaces. With no mixing required, it saves time. As an acrylic base, it offers greater grass adhesion than other PVA-based line paints.

Among its advantages are resistance to high weather and separation. The standard color is white, but other colors are available by special order. Available in 25-liter plastic containers, it can be diluted if overmarking is required.

Sensor System

The Hydromanager-Remote is the latest addition to the Systematic moisture-sensor product line. It is a moisture-reporting system that is compatible with most other manufacturer's computerized and "sensor-read" time clocks.

It will access field sensors using existing irrigation wires, not requiring extra or new wires from the clock to sensor locations. It will provide "real-time" moisture data to the computer or time clock for better irrigation scheduling.

The Remote features a five-year warranty on electronics and a lifetime warranty on the in-ground sensor. Standard features include a custom outdoor cabinet, dedicated power supply and simple installation and operation.

Air Tunnel for Big Loads

The ATH-900 air-tunnel mower increases productivity because it provides a finished appearance in the heavy material and dew-covered grass conditions that are often a reality at parks and other areas of large turf areas.

The air-tunnel mower provides a manicured appearance by immediately lifting cut material from the cutting circles, moving it into the tunnel and discharging it. Cutting heights are adjustable in half-inch increments from 1 to 6 inches.

Custom Field Stencils

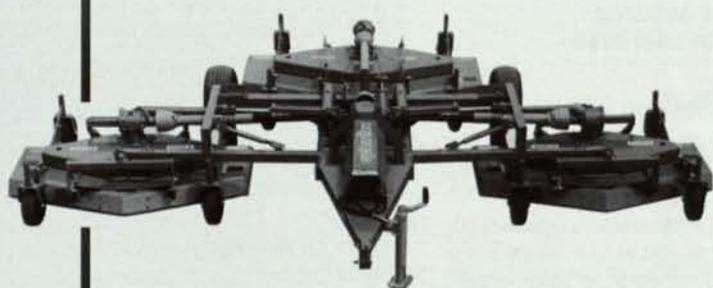

Here's an alternative to the old-fashioned, painstaking "stake-and-string" approach to creating designs on the football field — including team mascots, school logos and slogans. These and many other intricate designs can be converted into a reasonably priced custom stencil. Constructed on durable, flexible plastic for years of use, they will not tear, deteriorate or weather like paperboard stencils. Sizes are custom, too, up to 30 feet by 30 feet. Most stencils can be manufactured and delivered within 10 days.
