## Field Paint/Plant Growth Management Combined

Primo® plant growth management tool is now available for use in sports field marking paint. The use of Primo in field marking paint reduces the expensive labor and material costs associated with painting athletic fields by managing the growth of the painted turf, thus extending paint visibility.

To mix Primo with field paint, add 1/2 ounce of Primo into a spray tank for every gallon of finished paint. When used at recommended rates, Primo helps reduce turf growth and clippings by approximately 50 percent for four weeks.

## New Hydroseeding Process

HydroSod®, a true seeding process, begins when the seed is fully pre-germinated and treated with over a dozen other innovative techniques at HydroSod's state-of-the-art processing center. HydroSod's ability to establish within six to eight weeks reduces weed potential, minimizes plant stress, develops superior root structure, avoids soil interface problems and reduces fungus and disease potential. HydroSod's cost-effectiveness

allows for the establishment of turf-grass year-round.

## New Technology to Reclaim Sodict Soils

Based on technology developed at and patented by Texas A & M University, a powerful sodium displacer has been brought to market in the western U.S. by California Turf. The material, Exodis, is a strong liquid calcium electrolyte which is 350 times more soluble and works many times faster than gypsum.

Designed to displace sodium ions on soil particles with calcium ions, the product yields several benefits, including enhanced root mass development, deeper root extension and soil flocculation allowing better soil drainage.
