

# ROOKIES

## Safe Surface

The PlayFlex surfacing system, a polyurethane binder mixed with shredder rubber, turns discarded tires into playgrounds by binding the rubber particles into a cushioned blanket of protection for playgrounds and schools.

The system is done in two layers. The first is shredded rubber about 1-2 inches thick. The second layer is made with granulated, colored rubber,

approximately 1/2- to 3/4-inch thick.

The product:

- is easy to use;
- stays soft and flexible, even in cold temperatures;
- is used as a binder for recycled SBR and EPDM rubber granules;
- can be laid by hand;
- is environmentally safe.

## Laser Grading

The Level Best Grading System, which maintains a vertical accuracy within 0.25 inch, consists of:

- a proprietary grader box;
- laser transmitter and tripod;
- laser signal receivers;
- an onboard control panel mounted inside the cab;
- a Kubota tractor.

As a complete laser leveling system, the unit achieves a finished grade by controlling the box to grade the ground

to a predetermined level with the reference to the laser transmitter. The grader box comes in 7- or 8-foot widths; and is available with a single hydraulic center control configuration or a dual controlled, with receivers on each end for tighter tolerances.

The grader box can be attached to a Class I or Class II tractor in less than five minutes.
