

ATHLETIC FIELD SIDELINE MAT

Strong and durable Enkamat teamed with a tough polyester fabric can provide maximum protection for your natural turf athletic field. EnkamatPlus is a unique product made of a 3/4-in. nylon matting that has been heat bonded to a polyester fabric. The 95 percent open, three-dimensional matting provides an airspace and a structure that flexes as athletes and coaches continually walk over the sideline area. The polyester provides a smooth walkable surface that allows rainfall to penetrate through to the turf below.

TURF DRAINAGE SYSTEM

Designed for use in any sportsturf or golf course application, the WaterWick gravel injection system improves drainage without disturbing the soil surface. The system incorporates multiple plow blades that gently slice into the turf; as it is drawn apart, a gravel vein is injected into the opening to create a permanent underground aqueduct to carry away excess water.

SIPHON DRAINAGE SYSTEM

The Turf Drain Siphon System collects water deeper in the profile than other conventional drainage systems. Andrew Mack of Pembroke Pines, FL, says "before, our fields were unplayable after an afternoon rain storm. Since we installed the system, our fields are ready shortly after the rain stops." Paul Reilly of Lake Castle School in Madisonville, LA, says, "Our system has been tested to the max this year. Two hurricanes and over 40 inches of rain since July, and we only missed 2 days mowing."
