I always asked questions and was willing to take on new responsibilities."

"Talkin' Turf with Steve LeGros"

Editor's Note: This is the first sports turf manager profile in an occasional series called "Talkin' Turf."

Steve LeGros, of Grass Stains Productions, co-produced with Penn State's Jeff Fowler the terrific "Like A Rock" video they screened at the STMA Awards Banquet last January. Great job, guys, everyone loved it.

Steve also is the turfgrass specialist for Hersheypark Stadium, a sand-based field in Hershey, PA. Steve, thanks for taking the time to share some of your thoughts and practices for this inaugural "Talkin' Turf".

Q: How did you get started working with turf?
A: I started in 1985 as an assistant golf pro in Orlando, in the 3-year apprentice program to become a teaching pro. You learn merchandising, marketing, along with course management and all the aspects of running a golf club. You are required to spend time on the greenskeeping side so that you are aware of what is done on a day to day. This is when the turf bug bit me! I withdrew from the apprenticeship program and started working at a course as a laborer.

Having no experience, I started off doing the most basic of tasks (weeding, edging, and raking traps). I always asked questions and was willing to take on any new responsibilities. I did a lot of reading on turf and golf course management and eventually became an assistant superintendent.

In 1989 I accepted a position with the city of Maitland in Florida with the parks and recreation department, maintaining sports fields and common grounds. I enjoyed the golf industry but the daily tasks were very repetitive, I wanted something that would be more diverse. And sports turf is that. Each day there is a new challenge.

Q: Who was your mentor?
A: My mother and father, they taught me that whatever you do give it a 110 percent or it's not worth doing it at all.

Also, my grandparents said that whatever I chose to do be sure that it was what I loved to do, nothing could be worse in life then having to go to a job every day that you didn't look forward to doing.

Q: What was your biggest challenge last year?
A: Keeping the field playable this past fall, it rained at least 1 day a week if not more starting in September through December. And of course there many games played in the pouring rain, In November we hosted 18 games (seven games in 36 hours) and a drum and bugle corps competition. At this point the center of U1e field with becoming thin and unstable. we didn't have the time to resod before the next game, which was only 4 days away, so we had to find a way to make it safe and playable.

We topdressed from 10-yd. line to 10 yd. line, and from hashmark to hashmark with green sand. We then topdressed 1 ton of Turface on top of the sand, rolled it, and then broom dragged to loosen the top 1/16 inch, creating a baseball infield mix! It wasn't pretty, but the footing was fantastic. The players and officials loved it. The bottom line was that we provided a safe and playable surface.

We played the last 2 weeks in November like that, then we took the 3-point hitch blowers out and..."
blew most of the sand out toward the sidelines to prepare for the four state championship games that are in the first week of December. The "infield mix" protected the turf in the center of the field.

But with Murphy's Law we still were about to face our biggest challenges yet. Thirty-six hours before the first game it started to snow. We knew it was coming so we had the rain covers down.

We would start blowing it off the covers whenever it started so it wouldn't have a chance to accumulate, well, we started blowing off the snow at 3 AM on Thursday when there was only a dusting on the cover. Six hours later it was still snowing at 1 in an hour. At 4 PM it was still snowing and it had accumulated to about 4 in. on the field.

Meanwhile the entire stands were snow-covered only 19 hours before kickoff. We called out the troops, every able body came with shovels in hand, and we built two 50-ft. shoots out of tin and 2 x 4s as the snow was shot down to the track from the stands, skid loaders filled dump trucks.

It finally stopped snowing at 10 PM. With a plow attached to a work cart and the blowers we had the field completely uncovered at midnight and by 1 AM the cover was off. The only thing left to do now was to paint the field! We couldn't get it done prior due to the grooming we did on Monday and it started to drizzle on Tuesday when we put down the cover.

We had 7 hours before the pregame warm-ups, to get the logos, 3-ft. border, lines, numbers, and hashmarks. Did I mention that there are 4 of us to do this? We were taking the last three 5-yard strings up when the first teams came out for warm-ups.

Q: How do you get the most out of your crew?
A: I make them a part of all decisions, we sit around and talk about how are we going to accomplish the upcoming schedule. Make a game plan. I make it a point every day to say thank you for a great job.

Q: What do you do away from your field to relax?
A: Get aggravated with my golf game. Take day trips

Q: What advice do you have for turf managers?
A: When you consider what we do, it doesn't get any better then this. Remember to keep it fun; we are providing entertainment and recreation to our communities. Sports are the most important thing in life, if only for a couple of hours at a time.

RECYCLED RUBBER MULCH

Made from 100 percent recycled rubber truck tires, Rubberific Mulch’s most attractive feature is its longevity, says the manufacturer. It surpasses conventional mulches, which need annual replacement, by lasting at least 10 years without showing its age. Through a special treatment, Rubberific Mulch always appears new and will not fade or rot, even after years of exposure to the elements. “Not only does Rubberific Mulch save time and labor, but it stays attractive for a very long time,” says Richard Hynson, superintendent of Boone Valley Golf Club in Augusta, MO.

PRIVACY SCREENS

To ensure greater privacy of your sports field during practice sessions or special private gatherings, Covermaster Inc. offers a wide variety of custom designed screenings. Also preferred to conceal unsightly areas beyond the field’s perimeter, these types of enclosures can be ordered to meet your exact need in terms of material weight, strength, colors, and ease of installation. They can even pay for themselves with sponsor messages or other advertising.

STORM DETECTOR

Lightning can strike from as far as 9 miles away from any storm without warning! Within a 75-mile range, the ThunderBolt storm detector’s computer software analyzes and calculates the distance of lightning activity (in miles), storm intensity, and estimated time of arrival on an LCD screen. When lightning is local and most dangerous, audible and visual warnings are given as well as estimated time for the lightning to safely clear your area. With data updates every 15 seconds, the product lets your work crew, athletes, and fans know when it is safe to return to the field.

SPORTSTURF 35
Nearly 60 groundkeepers participated in the inaugural Roger Bossard 3-day Professional Sportsfield Institute in Tucson, AZ, last December. This one-of-a-kind training camp was developed to give groundkeepers at all skill levels access to major league expertise.

During the 3-day seminar, attendees got to walk through the steps needed to renovate an actual professional field. Working through problems in irrigation, soil conditioning and mowing, the group gained a unique perspective into the profession. The training was headed up by Roger Bossard, a world-renowned sportsfield builder and head groundskeeper for the Chicago White Sox.

Alan Sigwardt, director of grounds and engineering for Pro Player Stadium, and Dr. Hank Wilkinson, a horticultural professor at the University of Illinois joined Bossard. Sigwardt brought a special knowledge of dual-use fields to the training and Wilkinson’s expertise in building and maintaining natural grass fields rounded out the curriculum.

“It was really a successful event,” said Karl Rutherford, Professional Sportsfield Institute program coordinator. “We had people from many different jobs types and locations. There were groundkeepers from right there in Arizona and from as far away as Hawaii and Peru. I think the experience and knowledge they all brought with them made the event even more valuable.”

Some of the topics covered during the program included design, construction and renovation of sportsfields; building of sportsfields from the ground up; disease, insects and weed control; daily upkeep; and special sportsfield problems.

“The experience was fantastic,” said Bossard. “I truly believe that it is our responsibility as groundkeepers to continue to develop our skills and enhance our value to the team. You could tell that everyone at the seminar took pride in their work and they were all eager to learn ways to make their fields even better. I hope that everyone took away something new from the experience, I know I did.”

Many of the attendees echoed Bossard’s comments. “I’ve been to a lot of training seminars, but I learned more at this camp than the others combined,” one attendee stated. “I thought it was a great camp, it’s nice to have training options out there,” added another. “We got through an enormous amount of information in 3-days. We covered parts of field maintenance that I hadn’t even considered.”

“I thought the entire program was very professionally,” said a parks and rec attendee. “If anything could make it better, I’d like it to be even more hands-on.” One of the sportsfield builders added, “I thought the information was very extensive, if I could do one thing differently I would have brought along one or two of my colleagues so we could have shared the experience. It was a lot to learn in such a short time and I think having someone to talk about the program with when you get back home to your own field would help a lot.”

Oil Dri Corp. of America supplied this article.
**RE-USEABLE TREE BRACING SYSTEM**

This patented system is constructed from powder-coated steel and engineering grade plastic materials for durability and weather resistance. The adjustable system can be used to support newly planted trees with 3-14-in. caliper trunks and tree heights to 25 ft., and also for straightening and support existing trees and limbs. The system comes completely assembled with three adjustable legs, re-usable welded steel stakes, and all hardware.

One person can install the system in less than 3 minutes.

**BACKPACK BLOWER**

The Echo PB-460LN backpack power blower delivers professional-grade performance for sound-sensitive settings. Echo's Power Boost engine provides 44 cc of commercial power and improved combustion efficiency. Using patented Echo sound attenuation technology, the unit operates at 65 dBA at wide-open throttle as measured by ANSI. According to the National Institute on Deafness and Other Communication Disorders (NIDCD), 65 dB falls within the upper range of normal conversation.

The PB-460LN’s 64 fl. oz. see-through fuel tank ensures longer uninterrupted run times.

Safety for players is your number one concern. Instead of ending up with turf that looks like it's been ground up and spit out, build lush springy turf from the ground up with LAUNCH® Biostimulant.

LAUNCH® combines the best of Gordon’s FOCUS® and BOV-A-MURA® into one powerful formulation that encourages strong healthy roots, increased density and wear resistance. When used regularly, it also encourages quick germination, vigorous establishment and the rapid recovery of damaged sports turf, from soccer and football fields to golf greens and fairways.

- Latest surfactant technology for maximum soil penetration
- Ideal for seeding, sodding, sprigging and hydroseeding
- Contains humic, fulvic acid extract and kelp extract
- Enhanced with deodorized dairy manure slurry base
- Root and foliar uptake

**SAFETY EYEWEAR**
AOSafety is expanding its safety eyewear collection to offer a mix of fashion and eye protection. AOSafety's 2003 X-FACTOR Safety Sunwear Collection includes five new styles of everyday, all-occasion eyewear. The line features contemporary unisex styles that are trendy and comfortable. All styles are lightweight for prolonged wear and all lenses are hard-coated to resist scratching. Before adding these new styles, AOSafety researched current trends in non-safety eyewear. Tinted lenses, flash mirror coatings, frame-free lenses and metal temples are some of the fashion trends incorporated into the new collection.

NEED NEW FIELDS?

Beals Sport announces the grand opening ceremony of Phase I of Milpitas School District's athletic fields. Milpitas commissioned the company to design its outdoor athletic facilities. Phase I included existing track reconfiguration/reconstruction to an all-weather, eight-lane track that accommodates CCS (Central Coast Section) meets and is an invitational-level track. The track has also been reconstructed on the straightaway for sprint and is adjacent to the existing home bleachers.

STRING TRIMMER

RedMax has new low price on its RCZ2400 string trimmer, which is powered by the company's new fuel-efficient second-generation Strato-Charged engine. This unit meets emission standards without a catalytic converter and has fewer moving parts than the original Strato-Charged engines to increase reliability, says the company.

The stratified charge is now controlled by a piston port, rather than a reed valve, meaning the piston movement controls the fresh air charge rather than a reed valve that has to open and close.
