Sports Field Maintenance Planning

**BY JOHN NETWAL, CGCS**

The planning of maintenance activities for sports fields is not an exact science or is it a simple task. There are usually far too many variables from one facility to another to even suggest that any one system of planning would work for everyone. However, we do believe that thorough planning is the key to good turf management and despite my inhibitions about writing, I will attempt to share with you a brief overview how we go about our planning process.

Normally, we begin our process by doing a little research on the facility we are intending to maintain. We examine the previous years' records, prior maintenance practices, and the last season's schedules for any clues about the facilities history. Then we accurately measure the field and identify what the field use or uses are. Then we investigate what the field is comprised of, we want to know if the field is of native soil origin or had it been modified in some way during its construction. Then we will study the drainage and irrigation systems to find out what we are working with and whether or not some improvements might be necessary. Finally, we review the soil and water test to see if there are any issues that may impact our ability to grow healthy turf. After we gather all this preliminary information about our field, we then can begin to formulate a few ideas of what it might take for us to maintain this field.

Our next step is to try to learn all we can about what the expectations of, and demands on, the facility are going to be. We have found it very helpful to visit with our coaching staffs, athletes, and officials to get this information. Our coaches have graciously provided us with their practice and games schedules, while our athletes and officials have shared with us many of the little nuances to their games. Through these conversations we have learned a lot about the footing requirements of our playing surfaces as well as the importance of a true and accurate roll of a soccer ball to an athlete.

Knowing what our coaches and athletes are looking for has gone a long way in helping us to design management programs to meet their needs.

One of the primary tools that we use in the early stages of our planning process is a system of separating our management levels into three different categories based on written criteria. These categories have helped us to decide what level of maintenance we are going to assign to any particular field.

Our category "A" fields are our best fields and they receive our highest level of maintenance. Our category "B" fields represent our middle of the road facilities and they receive a slightly less intensive program. The category "C" fields represent our general grounds areas and they basically receive minimal input. The use of these categories has helped us to differentiate the maintenance levels for our wide variety of facilities that we maintain and assures us that each type of field is getting its appropriate allotment of resources (see sidebar).

Once we have selected the appropriate management category for our field, we then begin to develop "a field fact sheet." These fact sheets help us to outline our intended maintenance activities and serve as our primary planning guide. We record the following information on our field fact sheets for each type of our facilities:

- What type of field we are working with (baseball, football, etc.)
- Program year
- When was the field built (year)
- Field size
- Type of construction of the field and soil type

Field Maintenance Categories

We have based our management categories on the following criteria:

Category "A" Fields
- Our Best Fields
- Varsity Sports Only
- High Level of Management
- Source of Community Pride
- High Fertility (5-6 #/s N/m/year)

Category "B" Fields
- Varsity Practice Areas
- Junior High Game Fields

Category "C" Fields
- General Grounds Areas
- Junior High Practice Fields
- Community Access
- Low Level of Management
- Low Fertility (0-3 #/s N/m/year)
- No Irrigation
- Low Level of Cultural Practices, if any

Limited Community Access
- Medium Level of Management
- Moderate Fertility (3-5 #/s N/m/year)
- Manual and Automatic Irrigation
  Systems
- Moderate Level of Cultural Practices
  (annual overseeding and aerification etc.)

North Scott Community Schools Field Fact Sheet

Program Year: 2005
Built: 2001
Size: 109,000 sq. ft.
Construction: Sand Based, USGA Golf Green Specifications

Sand Based Soccer Field

Turf Species: "Sure Shot" Low Growth Bluegrass
Expectation Level: Very High, Category "A" Field
Nutrient Target: 6 #/s N, 1.8#/s P and 4.6 #/s K/m.
Annual Events: 23, Annual Events for both Boys and Girls Programs
Practice: Everyday April 1- June 10
Special Events: Junior High Football, Two Games / Week, September - October
Irrigation: Automatic System, 56 Hunter I-40
Heads, Rain Bird Controller, and City Water
Over Seeding: Annual Program with "Sure Shot" Kentucky Bluegrass
Topdressing: Monthly
Aeration: Annually 5/8-in. Core and Periodic Slicing
Growth Regulator: Primo, Monthly During Growing Season
Herbicide: Broadleaf Control 2-year Rotation (2004), Pre-emergence Annually if necessary
Insecticide: Scouting Treatment if Necessary

When your customer is the biggest game in town, you better be ready to play.

We’re proud to say that Princess 77 is once again the turf for the Super Bowl field — a major reason Phillip Jennings has been growing Princess 77 since it was released to the sod market. “From a growers standpoint, Princess 77 is a superior product for its rapid establishment from seed, deep green color, the finesse of the blades and its ability to handle high traffic areas. It’s a wonderful grass that we’re very proud of. And our customers are demanding it — it provides a faster recovery time than 419 and has a superior root system.”

When asked if he recommends Pennington Seed to others, Phillip replies “Without reservation. I’ve been using their humpa and fescue products since I’ve been in the sod business.”

Need more proof? George Toma, the head turf consultant for every Super Bowl said, “This is the best looking sod I have ever seen for a Super Bowl!”

These guys rely on Princess 77 — shouldn’t you?

For info, e-mail: sportturf@penningtonseed.com, call 1-800-285-SEED or visit: www.penningtonseed.com

Phillip Jennings
Phillip Jennings Turf Farms
Soperton, Georgia
Pennington customer since 1997
What is the desirable turf species?
The level of management category "A", "B", or "C"
Nutrient target
Number of annual events
Number of annual practices
Number of special events
Type of irrigation

Then we begin to look at what cultural practices we believe would be necessary for our plan based on our selected management category of either "A", "B", or "C" fields. We evaluate each of these cultural practices for their benefit as well as decide upon the timing and frequency that we would like to use them. Once we have made our selections we put this information on our field fact sheet:

- Aerification (solid tine, deep tine, hollow tine, etc.)
- Overseeding & sodding (seasonal seeding, monthly or weekly etc.)
- Irrigation & drainage (daily watering, deep infrequent or only after wilt)
- Fertility (1-3#s, 3-5#s or 5-6#s annually, granular or spoon feeding etc.)
- Mowing (in season and out of season frequencies, reel or rotary mowing)
- Plant protectants (no program, curative or preventative)
- Topdressing (bi-weekly, monthly or annually)
- Amendments (soil, water, compost or other)
- Other

With our field fact sheet complete, it then becomes our primary planning tool for all our maintenance programs. With this information at our fingertips along with our schedules of use from our coaching staff, we are now ready to build a management plan to fit our field (see figure).

Before using these methods of planning we were basically treating all of our fields the same. In many ways we were just not getting the most out of our resources despite the quality of our fields. So when we implemented these systems in our planning process our programs have taken leap forward and the proof of that is the quality of conditions found on all of our facilities. So if the key to good turf management is good planning, then we believe that we are head down the right road.

John Netwal, CGCS, is Director of Operations for North Scott Community Schools, Eldridge, IA.
Little League WS experience inspires student

BY GEORGE G BERNARDON, CSFM

ow I can say that one of life’s goals is complete. It took a number of years but I did what every father dreams of, taking his son to the Little League World Series.

But Alex was 16, six feet one inches tall and obviously not a Little Leaguer. Instead, we had been invited to join Don Fowler’s handpicked group of volunteers and local personnel that assemble once a year to create the masterpiece field that everyone sees on TV. What a unique group of individuals; there was a teacher, elementary school principal, three high school students including my son, three Ag extension agents, a local park manager, city worker, the owner of a local landscape contract business, one professional athletic field manager and one certified sports field manager.

When I arrived Friday morning (day before national and international championship games) everyone was on the field working together to get the job done. At the lead was Don Fowler, retired Penn State extension agent, ensuring that all tasks were being completed. His biggest job was really juggling the field management team around the television crew requests and completing all the required tasks through minor filming interruptions.

On game day Don met with the production crews early in the morning long before we field managers arrived. Rain was in the forecast and they wanted to get both games in. It was agreed that both fields would be made TV and game ready just in case. No problem! The field management team assembled, received directions from Don, and off we went preparing both sites. By noon both fields were ready.

As time for the International championship game approached, so did the heavy clouds. Game time was scheduled for 2:00 PM; at 1:45 the Public Announcer asked everyone to seek cover due to a line of heavy thunderstorms in the area. Don working with production crew, decided that we would cover the field in advance of the storm. We were late, the rain started before we got the cover down, but before any damage...
could occur. Fifteen minutes later the worst of the storm had passed and we started pushing the water off the tarp with any thing that could move water. As we were rolling up the tarp the PA announcer said "Let's hear it for our grounds crew" and a loud roar came from the stands. We got a little respect!

Once the game was over everyone picked up hand tools, buckets, wheelbarrows, paint and went to work. Less than one hour later the field was ready for the American championship game. During this game my son and I stayed at field level serving as the emergency grounds crew. He really enjoyed himself as we sat in the dugout with one of the teams and the TV crew. As the camera panned into the dugout, Alex got in a few on-screen cameo shots, which they noticed back home.

It was a wonderful experience and I could never thank Mr. Fowler enough for the opportunity to serve. One footnote to this story, my son Alex has enrolled in a 2-year Sports Turf Management Program. ST

George G Bernardon, CSFM, is Director of Grounds Management for GCA Services Group, Inc.

New todresser models. Lower prices. Breakthrough technology.

Home Field Advantage

The ball plays truer.

The surface is healthier.

Affordable New Models with Breakthrough Technology

The revolutionary Millcreek Saber Tooth™ spreading system makes all other todressers obsolete. Millcreek’s new, low-priced Turf Tiger™ Cub models, at under $9K, bring the world’s best todressers within reach of any school or park budget.

Millcreek brings out the best in your turf

Most todressers choke on wet, clumpy soil treatments found in real-world conditions. Millcreek’s patented Saber Tooth technology solves that problem. Now you can spread both coarse or fine materials quickly and efficiently, no matter what their consistency.

Millcreek Topdressers produce healthy playing surfaces

Millcreek’s Turf Tiger Cub provides a more consistent, healthier playing surface—healthier environmentally and for the players.

Millcreek’s Cub Topdressers with Saber Tooth technology

Model 3100—1.8 cu. yds. (heaped), Model 3200—2.3 cu. yds. (heaped)

Get the job done quickly!
PIONEER’S BRITE STRIPER 1600 PS
Pioneer’s Brite Striper 1600 Professional Series includes a heavy-duty piston compressor for years of trouble free service and a 4 position adjustable handle that offers comfort for multiple users. The Brite Striper 1600 is also equipped with a standard two-headed sprayer that cuts field striping time in half by ensuring crisp, professional lines the first time. The Brite Striper 1600 comes with a 3-year warranty and the 12-gal. paint tank comes with a 5-yr. limited warranty against rust out.

NEWSTRIPE’S HASHMARK-MASTER
The Hashmark-Master is the fastest way to paint hash-marks. Plus, it is a one-man job unlike using heavy templates that require a two or three men crew.

The Hashmark-Master attaches to any Newstripe field-marking machine. The operator follows the automatic line-up guide from one hash mark to the next, paints it and moves on. It is that simple. No more measuring or using messy templates.

STOW-N-GO FIELD MARKER
Tru Mark Athletic Field Marker introduces the Model EZ-70 Stow-n-Go field marker. Tru Mark incorporates its floating paint shoe technology on a 3-wheel steel chassis for durability and control even when painting curved lines and in close quarters. This new field marker integrates easy operations and maintenance capabilities with a removable 5-gal. paint tank, 12-volt sealed battery, and a 12-volt diaphragm pump.

FUTURE PRO SOCCER GOALS

These portable aluminum soccer goals come in three styles, with 4-in. square or round, or 2 x 4-in. aluminum crossbar and corner posts. Sizes range from 24-ft. official competition goals to 9-ft. bantam size. All feature QuikTrack net attachment tracks, a rear stabilizer bar and a backstay design to eliminate weld failures. Wheel kits are standard on 4-in. square and round goals.

NEWSTRIPE COOL-AIDE

Cool-Aide is a portable heat stress reduction system. The individual misting wands can reduce the surrounding air temperature by up to 20 degrees F, preventing possible player heat stress and stroke. Unit is completely portable and can be used anywhere: away games, stadiums, practice fields, tennis courts. It is totally self contained and requires no electrical power or water source.

BISON SHOOTOUT PORTABLE GOALS

Bison has introduced the first 4-in. square and 4-in. round competition soccer goals to maintain a 24-ft. width when used with or without corner post safety padding. You don’t have to sacrifice player safety to maintain the integrity of the game! This design allows assembly with official 24-ft. inside opening or 24 ft., 1 1/4-in. opening to compensate for the use of DuraSkin for Soccer corner post padding. Goals meet NCAA, National High School Federation and FIFA rules.

KEEPER GOALS’ MOVABLE GOAL

The ideal moveable goal with five semi-pneumatic wheels built into the frame that glide over the playing field. Goals can be easily moved by two people to accommodate drills so you can save valuable time. Wheels lock in place when in use, and goals are counterbalanced to make this goal durable and safe to use. May be used on grass or artificial turf.
