"Rapid Rain"

The Rapid Rain line of automatic watering systems are convenient and allow easy watering by automatically rewinding the hose and sprinkler, and shutting off when you choose. No need to move sprinklers around to different areas, or maintain a complicated and costly permanent system. The sprinklers require no batteries, no engines, and no electricity, and there is no need for special fittings.

Reset controller automatically

Designed as a simple add-on to any existing Hunter controller equipped with a SmartPort as well as the all-new ACC controller, Hunter's ET System permits installation of a truly automatic irrigation system that automatically resets to on-site weather conditions. The ET System uses evapotranspiration data collected on site to create an intelligent irrigation program for each watering day. This "smart" watering program is operated through the controller's Program "A", freeing its other programs to run non-irrigation or non-ET adjusted zones.

THE GAME MUST GO ON.

An Airfield is the ultimate sports turf drainage system whether you are playing on natural or artificial turf.

Artificial Turf Benefits:

- Drains remarkably faster
- Reduces installation time
- Reduces G-Max
- Eliminates rubber migration
- Eliminates standing water
- Strong enough for vehicles
- Below entire playing surface
- Air void for heating and cooling
- Allows flushing and sanitizing
- Maintains level playing surface

Natural Turf Benefits:

- Drains remarkably faster
- Reduces installation time
- Reduces irrigation requirements
- Extends playing season
- Eliminates standing water
- Reduces maintenance costs
- Below entire playing surface
- Superior perched water table
- Greater root mass
- Gas circulation through soil
