Spotlight: On the field, and on STMA

Many sports turf managers don’t like to be in the spotlight; they prefer to let their great playing surfaces speak for themselves. Recently however, the profession was highlighted in a PBS special entitled “Spotlight: On the Field” produced by the association and aired nationally. STMA CEO Kim Heck played the special at the association’s Annual Meeting and Lunch in San Antonio this past January with a promise to update members when the results of those airings came in. “Spotlight: On the Field” was a rousing success!

With this specific type of video, the interested producing party works with a company to put together the piece, which is then submitted to a central pool of videos that PBS stations across the country can then draw from. STMA was guaranteed a minimum number of airings, but that number can be exceeded if station managers receive requests to re-air a broadcast or simply choose to re-run it.

In a letter to STMA, Tower Productions Vice President of Communications Michael Casey stated the video “did well,” adding it “air[ed] 878 times in 49 percent of all US television households, reaching a gross audience of 4,431,900 viewers.” These airings took place in 207 major markets, from New York, NY and Bowling Green, KY to Las Vegas, NV and Terre Haute, IN.

Thank you to all who assisted in the production of this video to place a much-needed spotlight on our fields. The video is available for viewing on the association’s website, stma.org and via our YouTube channel (accessible via stma.org). By Shant Thomas, Sales and Marketing Manager.

Press coverage and other highlights: sports turf managers in the news

“I’ve always enjoyed competing at the highest level on natural grass and I’m glad FIFA decided to go this route with all 12 World Cup venues,” says Matt Besler, Sporting KC and US men’s national team defender. “I was very impressed with the playability and conditions in Brazil, especially how well the field drained in Recife for our final group stage match against Germany.”

“Natural grass fields take much more energy to prepare for elite competitions like the FIFA World Cup,” says Graham Zusi, Sporting KC and US men’s national team midfielder. “The time spent preparing them is much appreciated by the players, as the touch and feel on grass is more consistent.”

“The finishing touches on a Quest facility that will host its second consecutive training camp after the Giants moved home from the University at Albany last year.”

From “Behind the Scenes: New York Giants Head Groundskeeper Shares His Insight” by Kevin Boillard, Featured Columnist, BleacherReport.com

“Andy McNitt is a leading authority on all grasses, both natural and artificial, as the director of the Center for Sports Surface Research at Penn State University. He is also a long-time member of the US-based Sports Turf Managers Association. McNitt sees no reason why the Blue Jays will not be able to lay grass down within Rogers and have it thrive.

‘It’s going to be a big investment in the lights, but certainly we have the technology to grow grass indoors,’ he said.”

From “Rogers Centre looking to make artificial grass a thing of its past” by Robert MacLeod, The Globe and Mail (Canada)
