PRODUCT UPDATE

SMALL-PARTICLE FERTILIZER

To assure an even distribution of nutrients on highly-maintained, close-cut turf which is on a low-nitrogen program, the O.M. Scott & Sons Company has introduced ProTurf High Density (HD) Hi-Maintenance Turf Fertilizer. It offers a small particle size to deliver good particle distribution at rates less than 0.9 lb. of nitrogen per 1,000 square feet.

Developed for use on all turfgrasses, this fertilizer provides a complete analysis of the essential nutrients for healthy, vigorous growth. The dense, homogeneous product's uniformly-small particle size increases programming flexibility where rates lower than 1x are desired, and also reduces the chances of mottling the turf.

Among other advantages, it is clean, odorless and free-flowing; it will not burn the turf when used as directed; it contains no chloride salts; and it has no inert carrier.

CUSTOM STENCILS

Newstripe, Inc., can provide large custom stencils for painting school mascots, league logos, end zone marking plus many other applications.

These unique stencils are individually

designed to the customer's specifications. They are manufactured of Newstripe Poly-Tough material, which will conform to any surface and will not crack, break or permanently bend. They are extremely easy to clean: When the paint dries, it can simply be peeled off the stencil.

TUBULAR BLEACHERS

Tubular Budget Master Bleachers from Safway offer an economical way to seat 40 to 5,000 or more spectators. Starting with a basic installation, you can add on as your budget permits.

They are lighter in weight than angle iron bleachers without sacrificing strength. They are simple to assemble, dismantle and move, not only because of their light weight but also because there are fewer frames to move... only two for each ten-row section. In addition, they are sturdy, comfortable and long lasting.

Seat and footboards are cut to length from factory-furnished lumber, drilled when requested, and pressure-treated. Should local lumber be preferred, the bleacher can be furnished without seat and footboards.

SELECTIVE HERBICIDE

Nor-Am's Prograss Emulsifiable Concentrate is a selective herbicide for broad spectrum preemergence and postemergence weed control in newly-seeded perennial ryegrass areas by professional applicators.

Application is recommended from approximately two to four weeks prior to the main period of annual bluegrass germination to 30 days after emergence. Repeat once or twice, if needed to maintain control, at 30- to 60-day intervals.

Prograss is intended for use on the ornamental turf of golf courses, parks and lawns.

SAND FILTER

Lake Company's new Everfilt PAC sand media filter provides efficient filtration with less backwashing. The top chamber removes large quantities of particulates in the raw water without overloading the sand media portion of the filter and interrupting the irrigation cycle.

The particle accumulation chamber, or PAC, won't create additional pressure drop and doesn't require a high-velocity flow. Less-frequent backwashing with this filter saves water and energy.

PRODUCT UPDATE

TURF COVERS

Evergreen Turf Growth Fabric covers are made of polyethylene. This strong, ultraviolet-resistant, porous material is extremely light and easy to handle. It can be reused many times without degradation and is rot- and mildew-proof.

Placed over established or newly seeded turf areas, it will enable a controlled amount of sunlight and moisture to pass through and will allow gases to escape, providing the breathability needed for strong root growth and an even turf color.

Its greenhouse effect boosts seed germination by at least 30 percent and increases soil temperature up to seven degrees F, even in winter.

These covers are used in a wide range of applications. They include golf greens, sports playing fields, parks and recreation areas, and horticultural surfaces—in season or in winter. The firm produces them in three standard sizes or custom-made to fit.

A videotape demonstration of their use on a golf green will be loaned to prospective buyers with no charge or obligation.

TOWABLE LAWN COMBER

Any riding mower, garden tractor or turf vehicle can tow Bluebird's lawn comber. Forty-eight free-swinging blades of case-hardened steel spin on a flail rotor to cut grass runners and lift out thatch. A locking height adjustment enables professional turf managers to change the cutting depth by minute amounts.

The driver of the tow vehicle can engage or disengage the rotor without leaving his seat. A seven-hp Briggs & Stratton engine powers the 170-lb. unit. Protection from flying debris is provided by an exterior steel frame. When the job is finished, the lawn comber is easily raised and transported on heavy-duty wheels.

BLUEBIRD INTERNATIONAL

INSTITUTIONAL SPRINKLER

A mid-range institutional sprinkler with vandal-resistant features, the I-25 from Hunter Industries, is intended for use on playing fields, golf courses, parks, cemeteries and other turf areas. The four-inch pop-up stroke clears all grasses and most ground covers.

Any I-25 can be field-modified from 3.6 gpm within a 41-foot radius to 18 gpm within a 64-foot radius.

The sprinkler is gear-driven and designed for quiet, vibration-free, low-maintenance operation. It is backed with a full five-year unconditional, over-the-counter exchange warranty.

Use

Harley

Rock Rakes and Pickers on high visibility, high-use and intensively managed turf.

Perfectly screened seedbeds with a Harley. Renovates and rejuvenates existing grounds with fast thatching, conditioning and overseeding. Removes 1/2" rocks and roots for new athletic fields and playgrounds. A Harley rakes and grooves in one operation for overseeding. Levels and pulverizes a perfect seedbed, whether constructing or rebuilding. For professional turfgrass . . . put a Harley to work for you. Call or write today.

The Unique Tool...

There is nothing like a Harley!

"NEW" P.V.C. HAMMER ARRESTOR

Water Hammer Arrestors (pigmented)

The P.V.C. arrestor has been designed to protect the fittings and joints from the destructive hydraulic shock caused by quick closing solenoid valves—valves often found in commercial or home lawn sprinkling systems or larger commercial irrigation systems.

Applications include: Potable Water, Sea Water, Acids, Petroleum Products, and other chemicals or where corrosive conditions may be present.

Manufacturer's specifications:

Schedule 40 Material is used for sizes 1/2" to 1 1/2"

Schedule 80 Material is used to sizes over 2" in diameter.

P.V.C. material conforms to ASTM specification D1785-64T. Manufactured to pipe size, no special adaptors required.

Normal operating pressures: 35 to 500 PS.I.G.

When there's a lot on the line, professionals choose TORO!

That's why TORO was a key performer at Munich, Montreal and Los Angeles

Stadiums that hosted three of the last four Olympic Games chose Toro 640 sprinkler heads for the vital task of irrigation when the eyes of the world were focused on their turf. No wonder! Toro 640s are *safe*, with a very small 2 $\frac{1}{4}$ -inch exposed surface. And they install $\frac{1}{2}$ -inch *below* grade. They pop *up* 2 $\frac{3}{8}$ " for efficient watering, then *fully retract* with heavy duty stainless steel springs. To top it all, these superior sprinklers are backed by Toro's 5-year warranty. Oh, about the *fourth* Olympic site, Moscow? Well, we really don't know, but we'd be willing to bet that the Russians wish *they* had invented the Toro 640! Toro, the leader in sports field and large turf irrigation products.
