FIELD TILLAGE SYSTEM

Conventional rototillers characteristically lift rocks and fine soil particles to the surface. The rocks must be picked up by a landscape rake and the soil fine-graded before seed can be sown. Fine particles brought to the surface settle into soil pore spaces hampering drainage. The Lely roterra is designed to pulverize soil down to eight inches deep without bringing rocks and fine particles to the surface.

By using a series of vertically-rotating tines and an open-center roller, the machine tills and grades the seedbed. The slower the tractor travels the finer the soil will be. If the tines hit a rock in the soil they push it down or pivot out of its way. Moist lower soil is tilled below the surface reducing moisture loss. The roller follows the tines to smooth the surface and control the depth of tilling from 1/2- to eight-inches.

Models range from 80 inches to ten feet wide. The smallest unit is designed for tractors with category II hitches developing 30 hp at the PTO.

TARP MACHINE

Large, bulky tarps are difficult to roll and unroll even for the strongest field crew, especially during a rain or snow storm. A veteran stadium manager has taken the load off his crew by inventing the Tarp Machine.

Attached to a small tractor with three-point hitch and PTO, the patented device makes light work out of rolling or unrolling large, field-size tarps on drums. The tractor’s PTO powers a hydraulic system which gives the machine the muscle to lift and roll the drum so a tarp can be wrapped around it. All controls can be operated from the tractor seat.

As the value of covering fields grows and labor costs rise, labor-efficient methods to handle covers are needed. The Tarp Machine was designed to meet this need with an attachment to existing stadium equipment.

QUICK COUPLER VALVE

Connecting and operating quick-coupler sprinklers has been improved with Nelson’s two-inch valve. Designed for the company’s Big Gun sprinklers, the valve is actuated by a unique hydraulic assist. It can be operated manually or equipped with a solenoid to turn on and off automatically.

The valve permits older quick-coupler sprinkler heads located on the perimeter of athletic fields to be updated and can eliminate the need for travelling sprinklers or pop-up heads on the playing surface to obtain full coverage.

The valve makes quick-coupler irrigation systems semi-automatic. By adding a 24-volt solenoid to each valve, up to eight heads will automatically sequence during a 24-hour period.

Nelson recommends a water supply of at least 100 gpm with a minimum of 70 psi produced at the nozzle for the Big Gun/Quick Coupler system to function most effectively.

EIGHT-MONTH FERTILIZER

When frequent fertilization is out of the question, a fertilizer that works for an entire season makes a lot of sense. The chemists at Sierra Chemical Company have combined potassium with quick- and slow-release nitrogen to make Agriform Turf Mix, a quality, single-application fertilizer.

Unlike slow-release fertilizers, part of Agriform’s nitrogen goes right to work, while the remaining nitrogen, coated in plastic, becomes available during the next eight months. As temperatures rise and turf grows more rapidly, the product releases nitrogen faster to feed it. When temperatures fall less nitrogen is released to match the plant’s needs. Water-soluble potassium in Agriform delivers early color and immediate growth response. The product’s analysis is 34-0-7.

Providing the product is evenly distributed without damaging the plastic coating on the fertilizer, steady, season-long turf nutrition is provided. The material is naturally free-flowing and does not require an agitator. Hopper settings are generally lower than those required to deliver equivalent rates of conventional fertilizers.

TURF SWEEPER

When thousands of spectators and more than 100 players are counting on your field to look sharp and play well, a sweeper is a handy tool to have. The Estate Master sweepers from Parker can remove clippings and debris or add texture to a football or baseball field in less than ten minutes. A gang of three wheel-driven brush sweepers removes an eight-foot swath of debris with each pass of the field.

Each sweeper is built with cast iron wheels, long-life polypropylene brushes, mildew-resistant baskets, plated-steel tubing, and heavy gauge steel hood with a baked-on finish. The three units, when joined together with a frame, can be pulled with a small tractor to pick up clippings, leaves, and debris. The brushes can be adjusted to comb turf to give a field a groomed pattern. The sweepers also remove debris from artificial turf.

The simplicity of the sweepers makes them reliable. Baskets are easily and quickly dumped when full.

**COMPACTED SOIL?**

**Penetrate** brings turf areas back to life quickly and economically wherever compaction due to heavy usage has destroyed soil tilth and texture. This unique, easily applied treatment, is equally ideal for use on greens, fairways, playgrounds, park or athletic turf areas.

**Penetrate** goes to work immediately, restoring soil porosity to increase aeration and water percolation. Just look at the astounding before and after difference in the soil profile photos.

While **Penetrate** will help restore porosity and conditions already compacted soils, apply it at the first symptoms, before there is an unsightly and troublesome problem. It performs equally well on turf areas, in ornamental plantings and garden beds.

**Penetrate** is one of the Dolge line of quality turf care products from Rochester Midland. For information and the name of your nearby RMC representative, write or call Grounds Care Products, Rochester Midland Corp., P.O. Box 1515, Rochester, NY 14603. (716) 266-2250.

TECHNICAL SALES: TURF AND LANDSCAPE PRODUCTS. A major NYSE institution products manufacturer has an immediate opening for a technical sales person specializing in turf and landscape products and related equipment. This exciting opportunity can lead to growth potential through channels of seminar presentations and development of key sales groups through management skills.

REQUIREMENTS: 1. Degree in turf maintenance, management or related fields. 2. Minimum five years experience in turf management or landscaping maintenance. 3. Sales experience a definite plus.

This Dallas-based corporation offers excellent compensation and benefits package. Please send resume to: Dr. Ed Kajihiro, Opti-Gro/Division of Mantek, P.O. Box 152170, Irving, TX 75015.

CONSULTANTS WANTED
Consultants and sports field architects to advertise in the SCOREBOARD section of SportsTURF magazine. What better way to advertise to the right audience at the right price? Contact SportsTURF today.

HIGH READERSHIP
The classified section of SportsTURF magazine will be read by thousands of stadium managers, park superintendents, golf course superintendents, resort grounds managers, and university field supervisors.
MOTOROLA EXPLODES INTO 1987!

WITH STATE-OF-THE-ART ELECTRONIC IRRIGATION RADIO CONTROLS

★ New IBM PC compatible irrigation systems.
★ New built-in hand-held radio control for irrigation system maintenance.
★ New MIR-5000 System with capacity for up to 6000 field units.
★ New Motorola manufactured multi-tasking mid-range computer central.
★ New computer central control of multiple citywide irrigation sites.
★ New integrated weather station for environmental monitoring.
★ New nationally coordinated service network.
★ New fiberglass, rust-free cabinets available.

MOTOROLA CONTROL SYSTEMS: MEETING TODAY'S REQUIREMENTS. ANTICIPATING TOMORROW'S NEEDS.

For detailed information contact us today.

Motorola and are registered trademarks of Motorola, Inc.

SUPPORT SERVICES

Wherever Motorola sells, our product is backed by service. In the U.S., we have 900 authorized or company-owned centers. In addition, our products are serviced throughout the world by a wide network of company or authorized independent distributor service organizations.
