

Carson Industries' Grade Level Boxes are ready to "battle it out in the trenches" for you.

Only the toughest survive for long in the trenches.

Over the years, Carson Industries' Grade Level Boxes have earned a well-deserved reputation as the "combat veterans" in such battlegrounds as Turf and Irrigation, Water Municipalities, Telephone Utilities and CATV.

With the widest variety of product available (ranging from 6" Econos to Super Jumbos), you can always count on a Carson Box not to buckle under pressure. Even against years of combined enemy assault forces of water, frost, and sun, Carson's tough structural foam plastic holds its ground.

We're not buckin' for any medals. But we wouldn't mind volunteerin' for front-line duty with your outfit.

Enlist Carson Grade Level Boxes for your next vital underground installation mission.

We're ready, willing and able to serve indefinitely without reinforcements.

Call Carson Industries' H.Q. today at (714) 596-1988 for the name of our nearest base of operations.

RETROFIT PUMP CONTROLLER AND VALVE COMBINATION

A high-efficiency retrofit pump controller and electronic butterfly-valve combination that fits most existing pump stations has been introduced by Watertronics.

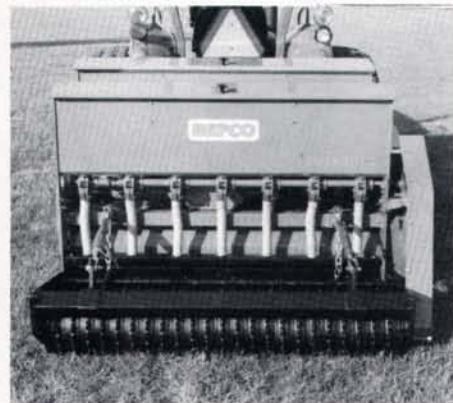

Electronic controls automatically sequence existing multiple pump systems based upon accurate flow/pressure transducer inputs for smooth, economical, and reliable operation.

The cost-effective retrofit system automatically controls electronically actuated valves for precise system-pressure regulation and surge dampening.

SEEDING MACHINES

Befco, Inc., has introduced four seeding machines for tractors ranging from 18 to 80 hp. The Green-Rite models I, II, III, and IV seeding machines have working widths from 50 to 84 inches.

The Green-Rite I is designed for one-pass seedbed preparation, in working widths of 52, 68 and 84 inches. It comes with a Till-Rite power harrow with a scarifier bar, a seed hopper with ground-drive system, large side shields, corrugated depth-control roller and heavy-duty shielded PTO with shearpin safety.

The Green-Rite II is a one-pass multi-purpose overseeder and aerator in working widths of 50, 58 and 66 inches. The rotary-tiller-base machine has slicing blades with four-inch spacing, and a four-speed gearbox. The fertilizer and seed hoppers have a ground-drive system and heavy-duty shielded PTO with slip-clutch safety.

The Green-Rite III has a 58-inch working width and is designed for use as an overseeder with smaller garden tractors

between 18 and 40 hp. The rotary-tiller-base machine with fertilizer and seed hoppers has a corrugated depth-control roller, ground-drive system for hoppers, slicing blades with three-inch spacing and heavy-duty shielded PTO with a slip clutch.

The Green-Rite IV is used as an aerator in working widths of 58, 66 and 74 inches. The rotary-tiller-base machine has a four-speed gearbox, and four-inch spacing for aerating, a heavy-duty shielded PTO with slip-clutch safety, adjustable side-mounted gauge wheels with smooth-rib turf tires, and the option of a conventional tiller rotor for complete seedbed preparation.

TURF UTILITY VEHICLE

A powerful, smoother-running version of the Multi-Pro turf utility vehicle, the Multi-Pro 418, is now available from Hahn, Inc.

Equipped with an 18-hp, twin-cylinder Kohler magnum engine, the vehicle features a larger, quieter muffler system; louvered engine compartment panels; and a redesigned clutch.

Attachments include a 160-gallon spray system; computerized sprayer controller; 17-cubic-foot-capacity pendulum-action spreader; and a 1,500-pound-capacity utility bed.

WATER STATION

The Kooler Aid Water Station by Standard Golf Company offers a cool and colorful way to keep players refreshed while on the fairway.

The water station is enclosed in a rugged steel mesh that makes dispensing easy and keeps the cooler secure. The sturdy mesh discourages players from opening the vessel to dip towels or clean balls. The long-lasting, thermo-coated powder finish is

available in white, yellow, red, brown, avocado or blue.

The cooler, made by Igloo, is manufactured of galvanized steel with a secure lid. The ten-gallon unit is designed for years of use. A metal cup dispenser and heavy-duty tripod stand are included in the water-station package. Color-coded litter caddies are available for trash control.

IRRIGATION REMOTE CONTROL

The TRC remote-irrigation control is a four-watt, portable system that will convert any solid-state or electro-mechanical sprinkler controller, regardless of manufacturer, to remote-control operation.

The controller, developed by Remote Control Technology, Inc., attaches to the sprinkler controller's terminal strip. It then bypasses the mechanics of the controller, allowing remote operation of all valves from up to one mile away.

The system includes a transmitter, receiver that operates 12 or 24 valves per connection depending on the model, a transformer that serves as a battery charger for the transmitter or alternate power supply for the receiver, a carrying case with foam insert, a quick-disconnect connector for quick temporary hookup to the terminal strip, and a socket-head cap-screw key to open and close the permanent connector housing.

SOFT TENNIS SURFACE

A unique surface consisting of a specially formulated sand filtered into a grass-like carpet of durable tufted Polyloom polypropylene fibers has been developed by Sportec International, Inc. Omnicourt tennis surface offers year-round playability with minimal maintenance.

The synthetic court surface can be installed over any suitable subbase, including concrete and asphalt courts. The surface never cracks or peels.

The court lines, made of the same material as the court, are inlaid. This eliminates inconsistent ball bounce and any need to repaint. The use of sand on the surface also improves water drainage, which

allows for more playing time and less downtime due to inclement weather.

The combination of sand and synthetic fiber also creates a comfortable surface, cushioning muscles, joints, knees, legs and lower back.

BENTGRASS

"We planted the 12th hole on Singing Hills' Willow Glen Course to SR 1020 two years ago, and it performed admirably. What's really significant is that members keep asking what we've done to the 12th hole that makes it putt so well! The members like SR 1020's performance from the players' point of view; we like that too, but we also value that we

haven't had to change our normal greens maintenance program to achieve the results."

David Fleming, C.G.C.S.
Superintendent, Singing Hills Country Club
El Cajon, CA

"The newer golf course greens planted to Penn-cross look beautiful, but they don't putt like the old South German Bent greens. The putting surface of those old greens is fine-textured, not thatchy or grainy, and the old greens don't show the spike marks like Penn-cross. We've been needing bent-grasses bred for golf quality as well as turf quality for a long time, and it looks like SR 1020 and

Providence fill the bill!"

Peter Trenham
President, Philadelphia Section PGA
St. David's Golf Club
Wayne, PA

Finally! New Cultivars Bred To Meet the Needs of the Superintendent and the Golfer!

At Seed Research, we listen to your needs. You've been wanting a bentgrass that's tough, looks great, and is easy to maintain . . . but one that's also fine-textured, with good putting green quality. And available.

So when the bentgrass shortage became apparent in 1983, we acted quickly and acquired parental germplasm from two of the finest bentgrass collections in the country — the University of Rhode Island and the University of Arizona. From those collections, we developed two exciting new creeping bentgrass cultivars, Providence (SR 1019) and SR 1020.

Evaluation on golf courses and at universities has shown that both these bents produce the kind of turf you demand: dark green, aggressive, competitive, easy to manage, good disease resistance, good stress tolerance, and compatible with existing bents for overseeding.

And, for real golfers like Peter Trenham, SR 1020 has proven it provides everything desired in a putting green bent: fine texture, uniform surface, and most importantly, an absence of grain, so the ball holds the line for true putting accuracy.

SR 1020 is already in production, and excellent quantities of certified seed are available. Providence will be available in August of 1989. With either of our exclusive new bent-grasses, you can look forward to a good-looking grass that will give you the performance you demand and the putting green quality your golfers prefer!
