| **Citation II** | - Contains a high level of endophyte that enhances insect resistance.  
                    - Very good resistance to leaf spot, brown patch, crown and stem rust, tolerance to red thread.  
                    - Rich dark green color with good mowing quality.  
                    - Excellent heat and wear tolerance. |
| **Saturn**      | - The number 1 variety in the 1986 National perennial ryegrass trial.  
                    - Dark blue-green colored low growing variety.  
                    - Improved heat tolerance, and resistance to leaf spot, brown patch and stem rust.  
                    - Very good performance in California overseeding trials. |
| **Charger**     | - Improved resistance to leaf spot, brown patch, stem and crown rust. Tolerance to red thread.  
                    - Good performance under low fertility and improved color and growth under cool weather conditions.  
                    - Early maturity and tested as 2HH. |
| **246 Sunrye**  | - Very dark blue-green colored turf-type variety.  
                    - Dwarfed growth habit than other varieties in overseeding trials in Palm Springs area.  
                    - Improved resistance to leaf spot, brown patch, and stem rust.  
                    - Contains a moderately high level of endophyte to enhance insect resistance. |
