

# SAVE WATER AND GROW YOUR BUSINESS WITH SUPERABSORBENT POLYMERS.

Now you can grow healthier grass, plants, shrubs and foliage – and save precious water.

Introducing STOCKOSORB®. A potassium polyacrylate/polyacrylamide superabsorbent copolymer that, when placed in soils or other growth media, can absorb up to 500 times its weight in water and release the water to the plant on demand. So, instead of the water evaporating or the nutrients leaching away, everything stays where it does the most good – at the roots.

Now you can grow more than grasses, plants, trees and shrubs. You can grow your bottom line. Try STOCKOSORB® By Stockhausen.
