Pennington®
Golf Course Superintendents country-wide have proven that McCords Flotation Tires are essential during the following delicate operations:

- Top Dressing
- Spraying
- Mowing
- Back Filling Traps
- Aerating

The large contact area of the flotation tire effectively distributes load over a broad area. This produces lower unit ground pressure resulting in minimized soil compaction.

Our custom built tire and wheel combinations will convert your golf course equipment into the most productive tools you will ever own. For further information call our toll free number today.

McCord Flotation Tires can eliminate costly tire rutting.

8 FERTILIZER SPREADER SELECTION: CHOICE DISTRIBUTION
Once simple, fertilizer spreader selection has become complex with the host of products on the market. Drop, broadcast or pendulum — whatever type of spreader you choose, the key is understanding how it operates and knowing your needs.

14 INFIELD MAINTENANCE: FOCUS ON SKINNED AREAS
Baseball diamond infield skinned areas take a pounding during games. Routine daily and weekly maintenance are the keys to keeping skinned areas safe and playable for athletes. Ed Miller, former head groundskeeper for the New York Yankees practice facilities, offers practical maintenance tips for keeping skinned areas in play.

18 MOWER MAINTENANCE: AN OUNCE OF PREVENTION
When it comes to keep mowers running reliably, it's the little things that count. A back-to-basics review.

22 PROFILE: STRAIGHT TALK FROM TURF DIAGNOSTICS & DESIGN
High-caliber work and unadulterated viewpoints — they're the hallmarks of Turf Diagnostics & Design Inc. Principals Steve McWilliams and Chuck Dixon pull no punches when it comes to the focus and future of the sports turf industry.

ON THE COVER: Baseball diamond skinned area maintenance is crucial for both field safety and playability.
You Can Try To Get The Right Seed Blend Or Mixture By Doing It Yourself.

Or, You Can Buy Medalist America Pre-Formulated Products.

Blending seed mixtures for specific turf applications takes more than just mixing seeds. It requires careful analysis of species and variety characteristics to be sure that the seeds being mixed complement each other to meet specific management and environmental requirements.

Medalist America researchers have spent years developing and perfecting a variety of seed mixtures formulated to meet a wide range of turf applications, and because we have done the research and created the blends, you don't have to.

Don't settle for less than the best possible mixture or blend. Call your Medalist America representative at 800-568-TURF for information about Medalist America Pre-Formulated Turfgrass seed.
On Service

When my wife left her job and went back to school three years ago to pursue a Ph.D., I moonlighted as a waiter to make up for the lost income. Four days a week I'd leave my office and head for this madhouse restaurant in Los Angeles, wait tables until midnight, then drive home. I'd usually get to bed by 1 a.m., get up at 6:30 a.m., and be back at my desk by 7:30 a.m. For two years, that was my schedule.

Now if this is starting to sound like one of those stories your grandfather used to tell about walking barefoot through snow to shovel coal 26-hours-a-day, forget it — I enjoyed it, at least for the first year. The money was great, the people I worked with, most of them younger than I, were full of life and promise. Plus, in many ways being in the service business, and being good at it, is immensely satisfying.

The restaurant was almost always crazy — line out the door every night, loud bar, louder kitchen, and many, many regulars. You would “turn” your six-table station no live time.s wait on at least 30 tables in a five- to six-hour period.

The regulars were often demanding and difficult. They knew the menu better than most of the servers and felt perfectly comfortable making up their own dishes. (One item became so popular the owner put it on the menu.) They were also our bread and butter, especially on those rare slow nights.

One Friday evening, I waited on one of my favorite regular customers. He was served well, he tipped well. On this particular evening, I wanted something special from the kitchen, something we'd done before many times, but couldn't always do. There was a rather “gray” policy on special orders, usually left to the server's and the kitchen's discretion.

On this night, I said no. The customer went through the ceiling. He cited instances where we'd done it before. I stopped right there — it's amazing how a moment of lucidity can penetrate even the darkest rage. I knew I'd always given him excellent service before. I also knew that at this moment the past didn't matter. Service is a matter of today, right here, right now, not yesterday. I was saying no because I was busy, didn't want to make the extra effort, and because I could. It was my call, not his — he knew nothing about the business.

I was saying no for all the wrong reasons and would have kept on saying it had I not challenged my "service."

I apologized and brought him what we wanted. The rest of the night went beautifully. Most importantly, a regular customer was not lost.

How does this apply to sports turf management? We're all in the service business, folks, and it's easy to say no. Sometimes it pays to pause and look at why we're saying it.

Matthew Trulio

At one time selecting fertilizer spreaders for turf care was easy. The first mechanized broadcast spreader wasn’t introduced until the late 1860s. It took until the mid-1950s to put that technology on wheels. Now the numerous products available for applying fertilizers, soil amendments, seed, topdressing materials and pesticides makes spreader selection a complex project.

This proliferation of products provides options that allow the turf manager to match equipment to the specific needs of the facility and to the limitations of the available budget.

The first step in the selection process is defining those needs. Prepare a list of activities for which spreading equipment will be required or could reduce time and labor expenditures. Then prepare a list of existing spreaders, the processes for which they are currently used, and their age and state of repair. The gap between the two lists defines needs.

The second step is exploring the options. Spreaders range from wheeled, hand-push drop and broadcast types to equipment-attached models with drop, broadcast or pendulum delivery methods.
