

TAKE ACTION AGAINST COMPACTION

FIELDSCOICE® is a specially formulated soil amendment that can help you take action against the compaction problems that plague today's active sports fields. Effective using standard aerification equipment as well as in new construction, FIELDSCOICE adds to the vigor and durability of high traffic areas found in football, soccer and baseball fields.

FIELDSCOICE is kiln-fired to fuse raw material into hard crystalline particles, which will not break down, even under extreme traffic and environmental conditions. The loose, aerated growing conditions created by the introduction of FIELDSCOICE results in increased vigor, root density and depth. Similarly, the large size of the FIELDSCOICE

particles makes them extremely effective in breaking up clay bound soils, and in permanently maintaining both aerated conditions and high infiltration rates.

The naturally porous structure of FIELDSCOICE provides for a high level of moisture and air migration. In dry periods, this product's natural capillary action lifts water and nutrients to the root zone, making them available to the plant. FIELDSCOICE's ability to retain up to 63% of its weight in water also allows it to hold moisture and nutrients, preventing them from leaching out of the root zone.

So, take action against compaction with FIELDSCOICE. For the name of the distributor nearest you or to request test data, contact Premier at 800/829-0215.
