the same turf may indicate a nutrient deficiency.

The problem may be a function of the root system, a result of soil conditions, a result of an imbalance between certain elements in the soil, or the result of other influences on the plant's growing environment or on the plant itself. A "gut" reaction might be to fertilize immediately to augment the deficient element. However, this can be a big mistake if the cause of the problem has not been identified.

The first step should be an investigation of what is occurring between the adequate supply of nutrients in the soil and the uptake by the plant. Field conditions must be assessed. Compaction may be restricting the supply of oxygen and nutrients to the root system. Areas saturated with water may be restricting the performance of the root system. Insects or disease organisms may be affecting plant vigor and reducing the plant's ability to absorb and process nutrients. Physical damage to the roots, plant crown or leaf tissue of the grass plant may be limiting the efficiency of the plant's growth functions. Such environmental factors as extreme temperatures and inadequate moisture supply may be affecting nutrient absorption. These are easy to identify, but there are many additional factors to consider.

For example, there may be a nutritional imbalance in the soil. An element of imbalance may be introduced temporarily through the water supply, either in natural rainfall or through irrigation. Changes in field use patterns, especially in specific areas of the field, may be increasing stress levels on the turf in those areas to the degree that their ability to absorb and process nutrients is reduced. In any of these situations, general fertilization, without regard for the nutritional status of the soil and/or the turfgrass plant, may force plant response that will increase plant stress levels and add to the problem rather than reducing or eliminating it. Certain minor elements which the grass plant requires in minimal amounts, such as iron, may be applied in a form that can be absorbed by the leaf tissue without stimulating overall plant growth and increasing stress levels.

An additional factor to consider in relation to tissue testing results is the optimum level of nutrients needed for an athletic field. The sports turf manager must assess the condition of the turf during its active growth and high use periods to gauge how the plant performs. At higher levels of the recommended range, if the plant is too lush and soft, excessive tissue damage may occur as a result of increased susceptibility to wear from athletic activities. At lower levels, sufficient nutrients may not be available to meet the greater needs of the plant, and growth may be restricted. Generally, the preferred maintenance practice is to tailor the fertilization program to the mid-level of the recommended range, and to adjust nutrient levels up or down according to plant performance.

Fertilization should be based on plant needs according to tissue test results. It should not follow a rigid, pre-determined schedule. Used correctly, tissue testing is a very important tool in being attuned to the needs of the grass plant. It can help develop strategies to provide for those needs using precise, well-defined measures.

Dr. Henry Indyk is Turfgrass Consultant-GSI Consultant for Turfcon, Somerset, NJ. His primary focus is sports fields and golf courses. Dr. Indyk has served as STMA Vice-President, Secretary, Board Member, Awards Committee Member and Conference Chair. He is co-Chair of STMA's Certification Committee.

Get Serious With STMA
Application for Membership

The Sports Turf Managers Association (STMA) is an organization of professionals representing all segments of the sports turf industry. Our members work to combine the science of growing grass and the art of maintaining sports turf to produce playing fields that are both safe and aesthetically pleasing.

STMA provides members with a variety of benefits, including: education through regional institutes and conferences; support for sports turf research; facilities tours; a national awards program; access to the STMA National Conference and Exhibition; complimentary subscriptions to Sports Turf Manager and sportsTURF Magazine; and much more.

If you're serious about the sports turf industry, then it's time to become a member of STMA. Join today!

"Promoting Better and Safer Sports Turf Areas"

February 1998 21
right blue skies and comfortable temperatures added to the beauty of the Mesa, Arizona setting, as attendees gathered for the Sports Turf Managers Association of Arizona Fall 1997 Turf Seminar on November 13th.

The Chapter had put together a great program. Mesa's Hohokam Stadium was buzzing with early morning activity. Exhibitors set up table-top displays in the concourse, and equipment and irrigation system displays "on the turf" just across the entry area drive and adjacent to the stadium entrance. Smiling chapter members greeted the attendees at the registration table in between the display areas. They invited visitors to stop by the displays to visit with exhibitors before the kick-off of the educational sessions.

Everyone then gathered for coffee and pastries and the morning's sessions. Chapter President, Kris Kircher, Irrigation Coordinator - Parks Maintenance for Chandler, Arizona, opened the seminar with a welcome to attendees and a thank you to exhibitors. First on the program was Harold Gentry, City of Mesa. He gave an overview of Hohokam Stadium, complete with details of the field construction and the maintenance program tailored to the new characteristics of the field.

Next, STMA Commercial Vice President Dr. Henry Indyk of Turfcon spoke on "Basic Soil Profiles of the Southwest." Dr. Indyk illustrated the specifics of the soil profiles and addressed the special challenges Southwest soils present to sports turf managers.

Next came STMA President, Mike Schiller, Superintendent of Parks for the Rolling Meadows (Illinois) Park District. Schiller showcased some of his experiences as an STMA member, Board member and STMA President. As an active member of both the national association and the Midwest Chapter, he emphasized the tremendous networking opportunities available to STMA members. He spoke of the extensive communication and sharing of information on new and innovative programs and facilities.

STMA Executive Director Steve Trusty spoke next. Trusty noted the range of services provided by STMA, including the bi-monthly newsletter, Sports Turf Manager; the Jobs Hotline; the Web Page; the Membership Roster and Resource Manual; and the annual Compendium, a handy resource of articles by and about sports turf managers. He said the national Headquarters exists as an additional resource for members and can be easily reached by the 800 phone number, by fax or by direct e-mail.

Before the lunch break, Kircher introduced the other national board members attending the Seminar: STMA Secretary Eugene Mayer, Technical Training and Support Manager for The Scotts Company; and President-Elect Steve Guise, Business Development Director for Valley Crest in San Fernando, California.

Attendees moved outside to mingle, visit and pick up their lunch plates. They even had a chance to watch a little pre-game batting practice. The break gave attendees more time to circulate among the displays and visit more with exhibitors.

Following the break, the group gathered back at the meeting room for a presentation on "General Grounds Maintenance" by STMA Board Member L. Murray Cook, Baseball Stadium and Sports Field Manager for Disney's Wide World of Sports complex in Lake Buena Vista, Florida. Cook gave details from his national and international work in baseball, and described the construction and operation of the multi-field, multi-sport Disney facility.

Following Cook's presentation, attendees were invited to stay for the afternoon game. Mesa will be the site of STMA's 10th Annual Conference and Exhibition on January 13 - 17, 1999, and the Arizona Chapter used Mesa's Hohokam Stadium hosted the STMA of Arizona Fall 97' Turf Seminar on November 13. Attendees were able to survey the field as they looked over new equipment on display. Courtesy: Trusty & Assoc.

the afternoon and evening following the Seminar to give national board members a preview of some of the probable sites for Seminar on Wheels tours. They were extremely impressive.

This super group of hosts and the combination of excellent tour sites, a great hotel, conference and exhibition facility, and the beauty of the Southwest all promise to rate next year's conference among the finest yet. Be sure to mark your calendars now for the 1999 Conference.

RAINCOVER SYSTEM
by COVERMASTER®

When you rely on the Covermaster® Raincover System to keep your field ready for play, you'll make life easier for you and your grounds crew at the same time.

The Covermaster® Raincover System features equipment that makes it simple to install, remove and store your tarp. It will also save you time and labor.

And with our wide choice of cover materials, Covermaster can custom design your tarp in the size and configuration that will meet your special needs.

The Covermaster® Raincover System. You could say we have you covered.

For more information call us today.

TARPMASTERTM

This lightweight and easy to handle roller with special end caps provides safety against injury for both grounds crew and the players.

TARPMACHINETM

Takes the heavy work out of rolling the cover over the field. Attaches to the P.T.O. on your tractor.
