Continued from pg. 10

home plate. Laying this out on paper led to the walkway design that's now a feature of Comet Field.

"Using a 50/50 mix of Kentucky bluegrasses and perennial ryegrasses, some donated straw, and lots of TLC, we had a beautiful new stand of grass by late fall. Our Athletic Boosters approved funds for the purchase of a new infield surface. Now I was seeing that red infield as close to reality."

Later that fall, the crew worked the masonry sand into the soil profile. Without access to a topdresser, the crew waited until the ground was frozen to bring in the selected red infield material, dumping loads of it in piles across the field.

The volunteers turned out once again to move the material with hand rakes to form and level the one-inch layer that now tops the infield.

The blue gumbo the crew had retrieved provided a base for the batter's boxes, catcher's box, and pitching area.

Cuthbertson says, "That red surface completed Phase Four. Few could believe what we were able to accomplish with so little money in such a short time."

"Our facility is a great source of pride for all those who had contributed their time, labor, and money for the team, and for the entire community," says Cuthbertson. "I can't begin to express how thankful I am and I know my assistants are for all the help and all the cooperation from the Athletic Department, the Athletic Boosters, and all the supporters throughout the community."

Bob Tracinski is business communications manager for John Deere in Raleigh, NC. He is public relations co-chair for the National STMA.

Evergreen

The Proven Turf Growth Blanket

- Earlier spring green-up
- Faster seed germination
- Deeper root development
- Delays dormancy in fall
- Ideal winter blanket
- Best for quick turf repairs
- Available in any size
- Longest lasting - 7 year warranty

NFL grounds crews must maintain the highest standards of quality in their field preparation practices. These professionals maintain the highest profile turf in the country, but they share the same ultimate goals of every sports turf manager: safety and playability.

The following techniques help these NFL groundskeepers maintain professional-quality athletic turf.

Get ready for football
by Ross Kurcab, Denver Broncos Football Club

A high-quality football field management program that uses its resources efficiently and meets the needs of the users is a continual work in progress. Any athletic field is a dynamic and perishable product. It often seems that I never have the same field in any given week during the year.

Tiftway Sports, Inc. with over 12 years of experience in athletic field construction and renovation. For your Turnkey Athletic field solution. Please call Today!

Tiftway Sports, Inc.
912-567-2380

It is this continual change that draws many of us to the profession. However, this also means that we cannot manage our fields by a simple "cookbook" recipe.

- There's always the budget

I realize that few fields are allocated the kinds of resources that NFL fields receive. Some techniques are simply out of the scope of many turf managers' budgets.

If your administration refuses to fund an upgrade or product that you think will increase quality, try the procedure on just one field, or even just one small part of a field. This way, you can better show the benefits of your request to the money people.

- Develop and maintain a good field log

I know it can seem cumbersome to stop in the middle of a project or application to take notes, but a few minutes spent can be incredibly valuable.

A good field log means never having to calibrate the same application twice. It's a wonderful planning and budgeting tool.

When we topdress the fields, for example, I save a lot of time by simply finding my notes from the last time we did it: "Tractor at 2500 RPMs, low range, 2nd gear, hopper setting of 3; used a total of 75 tons of sand for a rate of 18.75 tons/acre; took three people four hours to spread and two hours to broom in." It took me two minutes to write this down, yet it saves about four man-hours every time we topdress by eliminating the calibration process.

A good way to start is to simply obtain a desk calendar that has enough room each day for some notes, or one that allows you to reference more detailed entries. Give it a try, I think you'll be surprised at how many different ways it will be useful to you.

- Communicate with field users

Players, coaches, support staff, trainers, adminis-
WHAT DO WE CALL 18 YEARS OF RELIABLE PERFORMANCE?

A GOOD START.

An entirely new sports field irrigation system wasn’t an option for Bob Hildebrand, athletic facilities manager at Park Tudor School in Indianapolis. So, to update the system without going over budget, he kept his dependable, 18-year-old Toro 640 Series sprinklers in the ground, and added 20 new ones to get even better coverage. You’ll find that kind of Toro durability and reliability everywhere—from high schools to world-class venues like the Rose Bowl—helping managers maintain high-quality turf. For more information on 640 Series sprinklers and other sports field irrigation products, call 800-664-4740.

Proven 640 Series sprinklers are designed to prevent injuries. They’re installed up to ½ inch below-grade and feature over-molded rubber covers that won’t “pop off.”
Great Sports Striping At Superb Prices

- Light on your wallet – low initial cost and long life
- Great striping from the shearing reel cut of a National
- Smooth, clean cutting builds harder, healthier turf
- Easier to sharpen and lower operating cost
- Easier to maintain than rotary riding mower
- Easy rear turning wheel for high maneuverability

Visit us online: www.nationalmower.com or call: 1-888-907-3463

Nothing makes sports turf look better than a National. The Best Price. The Best Cutting.
STMA 11th Annual Conference & Exhibition
January 12-16, 2000 -- St. Louis, Missouri

General, Triple- and Quadruple-Choice Concurrent Educational Sessions
Round-Table Discussions
Your Choice of one of six 2-hour Workshops
Indoor Trade Show & Exhibition - Share an evening reception with exhibitors in the exhibit hall - followed by a second opportunity to view exhibits and connect with suppliers the next day
Gala Welcome Reception and Networking Bonanza
Reception, Banquet and Annual Awards Program
“Live Auction,” Silent Auction and Raffle of valuable sports memorabilia

Optional Events
Wednesday Seminar on Wheels to St. Louis area sports venues
Wednesday Afternoon “Category” Sessions
Sunday Wheels Tour to St. Louis attractions
Sunday “Football Playoff” get-together

choose a height that will provide a happy medium. Your choice should fall at the upper end (if not higher) of the warm-season preferred range, and within the preferred range of the cool-season species.

If heavy traffic is scheduled during the summer months in the northern part of the country, where only cool-season grasses are used, the mowing height should fall at the upper end of the range for the particular species. In fact, the upper end of the height range should be used on any field where heavy traffic dominates. This provides a greater amount of biomass for plant crown protection and player safety.

- Mowing frequency

Mowing frequency is most often determined by other cultural practices and by temperature. It should always be dictated by the 1/3-inch rule, which states that you should never remove more than 1/3 of the total length of the leaf at one time.

Lack of water and fertility will obviously slow down a turfgrass growth rate. Low soil temperatures also affect growth, particularly in stressed cool-season grasses. However, when adequate irrigation and nutrients are provided during the growing season, you should mow two or three times per week.

Mowing more frequently will help ensure that you follow the 1/3-inch rule. It will also promote more tillering, which thickens the turfgrass stand for a denser canopy. A dense canopy provides plant crown protection, greater biomass for wear tolerance, and a more resilient playing surface for field safety.

Practice field renovation
by Rich Genoff,
San Francisco 49ers

The San Francisco 49ers are currently growing Tifway II hybrid bermuda at the team's training facility in Santa Clara, CA. I have approximately 290,000 square feet of practice fields.

At year's end, the fields are like most NFL practice fields: beat up and worn out. In my case, they are also dormant.

The bermuda starts going dormant or losing its color at the first frost. This usually occurs toward the end of November, or by mid-December each year. When the season ends, I immediately start my
To build the best tractors, reach for the Moon. That’s our philosophy. No wonder the advanced 4000 Series sums up everything we know (and it’s a lot, after 162 years) about how to build a compact tractor. From highly productive transmissions, to easy implement attachment, to fully independent PTOs, to durable planetary final drives, these tractors reflect the kind of engineering expertise normally found only in very high-tech machines. Of course, you don’t need a degree in rocket science to use one.

Color-coded and -shaped controls, a backlit instrument panel, and convenient service points (that make it a snap to perform routine maintenance), are just a few of the ways they make the longest work days easier. So if you want to see the very latest in tractors, visit your local John Deere dealer (call 1-800-537-8233 to find one near you). Remember, when we say we’ve launched a new product, we mean it.
