

Now Available in Industrial Strength.

The Entirely New
GradeMaster Pro

Over 10 years ago, LaserLeveling revolutionized the grading industry by introducing the GradeMaster, the world's first automatic 3-point hitch grading system. Building on the unparalleled success and technology of the GradeMaster, LaserLeveling is proud to unveil the next generation automatic grading systems, the GradeMaster Pro.

The GradeMaster Pro has been engineered from the ground up to serve industry professionals looking for a heavy-duty laser grading system. The Pro Series boasts a durable ½" construction and adjustable endplates. This robust design also incorporates a unique bi-directional cutting edge, which allows you to push AND pull material. When automated with Laser Alignment Machine Control, the Pro Series offers push button simplicity and ¼" accuracy at a fraction of the cost of traditional systems.

So if you are looking for a grading system with the strength to keep up with your industry, look no further than the GradeMaster Pro.
