and upwards of 30 inches before we were through,” said Bossard. “The dome was scheduled to be finished before we started putting in the field, so the outdoor temperature shouldn’t have had any effect on us. It wasn’t finished though, so we had to devise a way to install the field on frozen ground.”

The field had to be thawed before the sod could be installed. A foot of snow had to be plowed away and a 6-inch trench of frozen ground had to be torn out by frost teeth on D8 bulldozers to put in the irrigation system. “But we were ready for opening day and that’s all that matters,” added Bossard.

Bossard and his team also developed a unique irrigation strategy for Miller Park. Its overhead, integrated hydraulic irrigation system was the first of its kind. It heats water from 80-93 degrees, then runs it through the irrigation system to help bring the turf out of dormancy and establish growth in the cool weather. “Sure, projects like this may push the envelope of creative sportsfield care,” said Bossard. “But the point is that the best way to broaden your skills is to work with the most experienced people in the game. This forum provides that opportunity.”

“In the end, it’s what you do on your field that counts. This course will teach you how to properly maintain your field, but more importantly how to fix mistakes that may have happened in the past. You’ll design a program that meets your specific maintenance needs and be able to apply it.”

“And if the attendees are really lucky,” added Bossard, “I may even reveal a few of my grandfather’s famous ‘17 Tricks of the Trade’—strictly for nostalgia, of course.”

**Pro’s Choice** sports field products

**Soilmaster** soil conditioners build strong turf to stand up to tough play.

Soilmaster soil conditioner is ideal for incorporating into aerification holes, to relieve compaction in the high traffic areas on soccer, football and baseball fields. Made from a unique montmorillonite clay, and fired for maximum hardness and stability, each granule quickly wicks water away from the playing surface and promotes drainage. The result—deep rooted, divot resistant turf that recovers more quickly from heavy play.

New STMA Chapter hosts field day

BY BOB STUDHOLME

The Pacific Northwest Chapter of the STMA held its inaugural event last August 19 at the home of the Seattle Mariners, Safeco Field. More than 200 people attended the field day that featured a rotating station format that addressed infield maintenance, turf care, and logo painting.

Former major league player Dave Henderson welcomed the crowd as the keynote speaker. Henderson spoke of the impact that a field manager can have on a game, both good and bad. He then answered questions about his favorite/least favorite ballparks, and his memories about the 1989 "Battle of the Bay" World Series.

At the lunch break, participants, while enjoying a genuine ball park hot dog, heard from the chapter board members as well as special guests Dale Getz, CSFM, and Charlie Vestal who addressed the value and growth of the STMA.

The six rotating stations consisted of Chapter President and Mariners' head groundskeeper, Bob Christofferson, sharing his knowledge on managing the infield skin, while his assistants, Tim Wilson and Leo Liebert, spoke on mound maintenance and construction. The Washington State University turfgrass research team of Dr. Gwen Stahnke and Dr. Eric Miltner spoke on managing sand-based turf systems, and University of Oregon grounds manager Mike Wagner, CSFM, covered the aspects of mowing and its impact on the turfgrass plant. Seattle Seahawks' director of fields, Jay Warnick, CSFM, demonstrated some of the machines used in field and logo painting. The final station allowed participants to visit the equipment and displays of the six sponsors.

The day was a great success and a perfect way to launch the new PNWSTMA Chapter. Future plans include a round-table discussion and election meeting this fall. For more information contact Jay Warnick at 425-893-5130, or email JayW@Seahawks.com.

STMA Chapter News

MO-KAN Sports Turf Managers Association: The MO-Kan Chapter will hold a Sports Facility Tour On Wheels October 16. Tour sites will be announced soon. Each stop will include a walking tour and a description of the maintenance practices of the facility.

For information on the MO-KAN STMA Chapter, or upcoming events, call Jody Gill at 913-239-4121, Gary Curtis at 816-460-6215, or Mike Green at 913-208-6158.

Minnesota Chapter: The Minnesota Chapter's Fall Workshop will be held in Woodbury October 17. More details will be announced soon.

The Minnesota Turf & Grounds Foundation announces two opportunities for Pesticide Recertification, Categories A & E: October 15 at the Minnesota Valley Country Club in Bloomington and November 5 at Madden's Resort Town Hall Convention Center in Brainerd. For information on the recertification programs visit the website: www.mtgfor.org or call 612-625-9234.

For information on the Minnesota Chapter, or upcoming events, contact Jeff Hintz, Bethel College & Seminary, St. Paul, at tel. 651-638-6075 or e-mail: j-hintz@bethel.edu.

Keystone Athletic Field Managers Organization (KAFMO/STMA): The KAFMO Cup Golf Tournament will be held October 21 at Fairview Golf Course in Lebanon. Start time is 12:30 pm. This is the main fundraiser for the KAFMO scholarship fund. The scramble tournament is open to anyone who wants to enjoy a round golf, a great meal, and super day of networking. For more information on the tournament con-
Ohio Sports Turf Managers Association (OSTMA): The OSTMA Chapter will hold its fifth annual meeting and award breakfast December 11 in conjunction with the Ohio Turfgrass Foundation Annual Conference and Trade Show at the Columbus Convention Center. The Conference dates are December 9-12. For information on the Conference, call 888-683-3444. For information on the OSTMA Chapter, or upcoming events, call OSTMA Headquarters at 740-452-4541 or Boyd Montgomery at 419-585-1962; or visit the chapter's website at www.ostma.org.

Sports Turf Managers Association of Arizona: For information on the chapter, or upcoming events, contact Chris Calcaterra at e-mail: chrisc@peoriaaz.com or tel. 623-412-4231 or Bill Murphy, at e-mail: bmurphy@ci.scottsdale.az.us or tel. 480-312-7956.

BTC-300 Bannerman Turf Comb
Excessive strain by players and maintenance vehicles leads to compaction of the turfgrass. In conjunction with matting, this prevents the natural exchange of gases and water penetration. Combining the turfgrass then becomes essential. The Turf Comb can also be used to work in top-dressing material into the roots after aeration.

Hummer
SALES/MARKETING POSITION AVAILABLE:
Hummer Sports Surfaces, LLC, a 33-year-old southeastern Pennsylvania-based company and one of the main players in the synthetic and natural grass sports turf business in the U.S., seeks a person for a sales and marketing position for its SoftSport™ synthetic turf product. Applicant must have 2-5 years experience in sales in the sports field construction industry. Applicant must be organized, highly motivated, disciplined and professional, as well as a good communicator. Territory would cover the eastern U.S. Travel required for site visits, trade shows, etc. Reasonable relocation expenses reimbursed. Benefits include: company vehicle, expense account, bonus program, health insurance, vacation, and participation in 401K. Salary negotiable and commensurate with experience.

Applicant should send resume with 3 references to Colleen Hummer, 1024 Laureldale Court, Lititz, PA 17543, fax information to 717-560-6318 or e-mail information to colleen@usaturf.com.

Questions regarding this position can be directed to Colleen Hummer at the listed e-mail address.

Hummer
SOD FARM MGT. POSITION AVAILABLE:
General manager sought for Southeastern Pennsylvania wholesale sod operation. Applicant must have minimum of 10 yrs experience between education & work experience in turfgrass production, and be capable of assuming responsibility for business operations, accounting, sales marketing, and personnel. Farm consists of 500 acres within approx. 75 mile radius of market, 50% irrigated, in-house delivery fleet, no installation responsibilities.

Salary: $50,000+, negotiable, commensurate with experience; health and retirement benefits; bonus program; temporary or permanent family housing available; will pay reasonable expenses to relocate.

Applicant should send resume with 3 references to Colleen Hummer, 1024 Laureldale Court, Lititz, PA 17543, fax information to 717-560-6318 or e-mail information to colleen@usaturf.com.

Notes: This is a unique position; owner wishes to retire soon and/or take other positions in the parent company.

Q&A

Soil prep and rolling: listen to honest Abe

We wanted to know what your opinion is on rolling athletic fields before sodding to help achieve a level playing surface? We primarily work with native soils, but also install sand-based fields. Our main concern is too much compaction before sodding when preparing the surface for native soil fields.

Landtek Group
Long Island, NY

Put me on a field or a construction job with any type of roller and it is a very easy call for me to assess the situation, observe the roller, and then decide if we should continue rolling under those conditions. Ask me to give advice without seeing the situation and my fingers freeze up.

But you did specifically ask about rolling native soil (assuming something with at least 60% silt-clay by weight) just before sodding. It sounds like you have been on construction jobs where the graded field just didn't look smooth enough to meet your approval and you are wondering if the roller could help or hurt the situation. Hold that picture in your mind; we'll be back after a brief lecture on rolling vs. grading.

Rolling is not a substitute for, or means of overcoming, poor grading. In other words you can't smash the ground with a roller to change the contour or cause higher areas to be filled into low areas. That work needs to be done by laser grading and there are excellent tools and contractors that are readily available. I won't tell you that I never roll bare soils because I can think of several situations where I have tried rolling just to see if I can make the situation better.

Rolling can be used to compact soft spots where the grader has smoothed loose dirt into a low spot. Even though a roller can be used for this we generally find that the vehicle tires and box blade on the laser grader are the best means of firming up the surface. Sometimes the roller is used in conjunction with the laser grader if we have a lot of soft spots. If we get lucky (not too wet and not too dry) the soil works just perfectly and after laser grading there is about a 1/4-inch of crumbly soil on top of a firm base.

Walking or driving on the surface with sod-laying equipment should only leave shallow tracks that are easily raked smooth with a landscape rake, drag, or ball field bunker rake. Here is where you should have a concern with rolling or grading before sodding. If the surface is left too hard then seed or new roots from sod will not develop because of surface compaction. Rolling when the soil is too wet will smash the clay particles together and cause a glazing of the surface; when dry the surface is crusty and seed sits on top of the surface rather than nestled down and slightly buried into the soil. Seed on top of the soil seldom germinates.

The surface should be prepared the same for seeding or sodding. Grading equipment can sometimes leave the soil surface very hard, especially where the cutting bar has planed a high spot. When rolling, grading, or equipment traffic causes a hard surface it must be scarified to loosen the hard surface before seeding or sodding. Working the soil when it is too wet usually causes hard and glazed surface conditions.

I always ask honest Abe Lincoln if my surface is ready for planting turfgrass. Stick a penny in the ground right side up or upside down. The loose soil should be somewhere in Lincoln's ear if you are listening to his advice. If your budget won't allow for the penny method then simply walk over the area to inspect the seed or sod bed. Areas that do not leave any footprints are probably too hard and need to be scarified. On the other hand, foot prints deeper than a half-inch indicates that the seed could be buried too deep or the ground may settle causing a low spot.

Just 2 weeks ago I had a local sports field builder laser grade a new native soil area at our turfgrass research facility. The soil conditions were just perfect for working the ground, slightly drier than moist, no soil stuck to the equipment, and there was just a hint of dust as the soil moved across the box blade. They had started by putting the teeth down on the box blade to loosen up the surface. Two hours later the 0.5% grade was perfect and the filled areas had been firmed by the process of laser grading and tire packing.

We probably could have seeded at that point but Mr. Lincoln would have been upset with about 15% of the area that was left too hard from the cutting of the grader bar. We wanted to get done that day, but we were just not happy with the hard areas, so the next morning we quickly built a nail drag and scratched up the entire surface and followed that with our screen drag. Now the surface was perfect, loose in the top 1/4-inch and firm.

So to answer your question on rolling before sodding I would say that rolling before sodding on a crumbly dry soil will probably not cause much compaction and could help firm up a surface that is too soft. Rolling that compacts moist soil will require some type of scarification before seeding. Aside from rolling, one of my favorite ways to firm up a surface and get all of the soft spots to settle is to give a light irrigation just until puddles begin to form. Each piece of ground works a little different depending on the moisture and soil type. It may take several cycles of grading, dragging, scarifying, and water settling to get the surface just right.

There is one thing for sure; patience is needed since conditions are not always right to work the soil. Rolling can be a helpful tool in the process of preparing ground, but it is not a substitute for proper grading or a means to flatten wet soils as final preparation for sodding.
STMA 14th ANNUAL CONFERENCE & EXHIBITION
January 15-19, 2003 - San Antonio, Texas
