FIELD LINE MARKER
Newstripe has available its all-new ECO-LINER field marker, a battery-powered unit that runs quietly (one charge lasts 8 hours) and eliminates gas costs or compressor maintenance. The pump draws paint from a standard 5-gal. pail without pressure, lid clamps, air tanks, etc.; when you've emptied one bucket of premixed paint, just lift it off and put a new one in. To begin striping, set a bucket of paint on the machine, snap on the lid, and pull the trigger.

BATTERY-POWERED MARKERS
The Topline series of battery-powered line markers are used at all levels of play from the majors to parks and recreation. They are the easiest markers to clean in the industry and are whisper quiet when in operation, says the manufacturer. The Topline TXF 252 and 505 models both offer tip-back tanks for easy cleaning, low pressure application, 6-gal. tank capacity, and battery charger. A paint gun option is available for painting logos and other large areas.

FIELD MARKING PAINT
MAX from Pioneer contains Halogen 2000 and Optiwite optical brighteners for bright white lines. This formula is higher in density and solids than ordinary paints so it lasts up to 50 percent longer, says the manufacturer. These brighteners are mixed in the paint to provide lines that "glow" during televised games. Will not harm turf, equipment, or uniforms.

Kubota gives you a range of affordable compact utility tractors for turf and landscape work. They are tough and tender at the same time.

Tough: Handle all the different landscaping and grounds maintenance jobs you need to get done with Kubota's Performance-Matched loaders and backhoes, plus operate tillers, mowers, sprayers, snowblowers and more.

Tender: You can choose standard turf tires, Galaxy turf special tires for a light step on the turf or R4 industrial tires for multi-purpose use.
Your Kubota dealer can help you choose the powerful, versatile, affordable model that's best for your work and your budget.

Kubota L4610
- 40.5 Pro HP, GST model, Glide Shift Transmission
- 39 FTO HP, HST model, Feather Step Hydrostatic
- Power steering
- Deluxe, integral cab available

Kubota M5700
- 53 FTO HP & TVCS Kubota diesel engine
- Live, Independent Hydraulic PTO
- Standard Transmission 6/6/6
- Hydraulic shuttle option
- Hydraulic power steering

For more information, call 1-888-4-KUBOTA, Ext. 408 or write to Kubota Tractor Corporation, 3401 Del Amo Boulevard, Dept. ST, Torrance, CA 90503. Financing available through Kubota Credit Corporation. www.kubota.com

FIELD MARKING PAINT

Game Day 8050 Super White Athletic Field Marking Paint is a product by Suntec Paint that is specifically developed with the needs of the sports turf professional in mind. Game Day 8050 is highly pigmented with concentrated amounts of titanium dioxide and optical brighteners to give an extremely brilliant white finish. The pigment loading contains no calcium carbonate, eliminating a limestone buildup on the field and drastically reducing settling after mixing. Game Day 8050 also contains more latex resin, which gives added durability for a longer lasting job. This environmentally friendly product contains no harmful ingredients, allowing grass to grow back vibrantly and healthy. Its highly concentrated formula allows the user to dilute two to three parts water to one part paint to achieve the desired level of brightness. It stays in suspension longer after mixing, with no hard settling. It is easy to mix and clean up with soap and water.

**Pictorial Guides to Quality Groundskeeping Book I**  
*by Floyd Perry*  
The only textbooks on the market for the grounds supervisor, athletic coach, little league volunteer, or baseball purist. Over 500 photos in each text with many in color.

**Book One, “Covering All The Bases”**  
(100 pgs) covers Mound and Home Plate Repair; Edging, Dragging, Lip Reduction; Water Removal; Homemade Equipment and Tricks of the Trade.

**Item # 4008 - Pictorial Guides to Quality Groundskeeping**  
$37.00

**Pictorial Guides to Quality Groundskeeping Book II**  
*Book Two, “There Ain’t No Rules”*  
(108 pgs) covers Football, Soccer, Softball, Little League, Minor League, College and High School Facilities. Also covers Curbside Appeal; Tricks of the Trade, New Ideas for Easy Maintenance; Professional Research From Higher Learning Centers and much more.

**Item # 4009 - Pictorial Guides to Quality Groundskeeping**  
$37.00

**The ABC’s Grounds Maintenance: Volume III**  
*Soccer/Football Field Refurbishment,*  
*by Grounds Maintenance Service*  
Features setting/rebuilding, homeplate area; rebuilding pitchers mound; sodding dugout walkways; application of crushed; brick; rounding infield crecent; complete infield; repair of turf; fertilizing & overseeding, patterns; reducing infield lips; removal of dew from grass; water removal in clay areas; edging the running track. VIDEO. 55 Minutes.

**Item # 4019 - The ABC’s Grounds Maintenance: Volume III**  
$49.95

*by Jim Puhalla, Jeff Krans, and Mike Goatley*  

**Item # 4024 - Sports Fields: A Manual for Design, Construction and Maintenance**  
$34.95

**Spanish Phrases for Landscaping Professionals,**  
*by Jason Holben and Dominic Arbib*  
This contains more than 1600 words and phrases in an easy to use “point and shoot” format. These phrases are complimented by simple, intuitive phonetics. 204 pgs.

**Item # 4198 - Spanish Phrases for Landscaping Professionals**  
$24.99

**Picture Perfect: Mowing Techniques for Lawns, Landscapes, and Sports**  
*by David R. Mellor*  
Picture Perfect gives you first-hand, step-by-step guidance on creating your own unique lawn patterns. You’ll learn the basic patterns - checkerboard, stripes, diamonds, waves, arches and circles - in use simple step-by-step instructions, along with practical advice on equipment selection and use. Patterns are demonstrated in simple instructions followed by dozens of detailed photographs. 160 pgs.

FOREMEDIATE RELEASE LINE MARKER

The Fastliner line marking system by Broyhill is the ideal tool for athletic fields, streets, and parking lots. The unit mounts onto most popular turf utility vehicles and performs at speeds up to 15 mph. The 14-gal. poly tank ensures consistent paint application via a 12-volt diaphragm pump. The exclusive non-clogging paint concentrate feeds through an anti-drip nozzle surrounded by a patented spring-loaded marking shoe-designed to apply clean, sharp lines from 1-4 in. wide.

**LINK PUMP SYSTEM & CONTROLS**

Watertronics closes the loop between the irrigation pumping system and the irrigation central controls with the PumpLink software interface. Used in conjunction with Watervision operating software, PumpLink connects the pump station and the irrigation program so they communicate in real time, which allows the irrigation system to get water to where it is needed reliably. The PumpLink interface comes standard with Watervision (which will run on any brand of irrigation pumping system), and is fully compatible with all the major irrigation manufacturer's operating software programs.

It's hard to go wrong when you're choosing between two new warm-season turfgrass varieties as outstanding as SeaIsle 1 Seashore Paspalum and TifSport Bermudagrass. These two new patented cultivars can only be sold as certified sod or sprigs, and only by a member of a select group of licensed growers. Our top-quality producers have agreed to a stringent set of production practices. This means the grass you buy from a Florida, Georgia or South Carolina grower is going to be the same grass you buy from a Texas or California grower. And it'll be the same 10 years down the road. If you're involved with the installation or on-going maintenance of a sports field, you'll really appreciate how these turfgrasses compare to Tifway 419 and the other older varieties in use today.

While SeaIsle 1 is similar in texture and wear tolerance to hybrid bermuda, it may offer a number of important advantages: First and foremost, it can handle multiple stresses: prolonged drought, high salt levels, waterlogging and extremely high or low soil pH levels. Secondly, SeaIsle 1 can tolerate most types of alternate water sources, including wastewater, effluent, gray water, brackish water, and even ocean water. It requires less irrigating, less fertilizer and only minimal pesticide applications when compared to other warm-season cultivars. It also handles cloudy conditions and the low light intensity of domed stadiums extremely well. That's why it was such a good choice for the Houston Astros' new field. Take a look at its pluses and specify SeaIsle 1 for your new sports field or renovation project.

Looking for a bermudagrass that can stand up to the stress and demands of big-time sports, to the wear and tear of football and soccer cleats, to the punishment of baseball slides, dives and spikes? Relax; you've found it. TifSport has outstanding color, disease resistance and cold hardiness, too. In fact, TifSport is performing with flying colors as far north as FedEx Field in Landover, Maryland. It's also the Houston Texans choice for their new retractable roof Reliant Stadium. If you're a sports turf manager, you know what's important for a playing field - outstanding density, turf strength and turf quality. You need a grass that recovers quickly from day-in-and-day-out abuse. And that's just what TifSport has been bred to do. Be sure to ask for TifSport certified bermudagrass by name.

Standing tall
Goal posts designed to resist frenzied fans

BY JOHN KMITTA

Every autumn some things are certain to happen. Not only the changing of the leaves, shorter days and cool winds, but tailgate parties, marching bands and storied rivalries—the certainties of college football. Almost as certain is the prospect that raucous fans will charge football fields throughout the land as part of that questionable tradition of “tearing down” the goal posts. What is becoming less certain is that they will actually succeed.

Merchants Environmental Industries (MEI), a Chicago-based engineering and contracting firm, has spent the last decade designing goal posts to withstand the onslaught of overzealous attackers.

“We got into [the goal post business] a little over 10 years ago,” said Bob Allen, vice president of MEI. “We were asked to get involved when Northwestern University was losing almost a goal post per week. They had lost a lot of games and the students had no reason to be happy, so they made themselves happy by tearing the goal posts down. The university asked us to design something that would be resistant to this weekly tear downs.”

Northwestern, the University of Illinois, Notre Dame, Arizona State and Penn State are some of the 25 universities that now use MEI’s goal posts.

“Mostly it is schools that are looking forward to really good seasons,” said Allen. “The schools that are perpetually in the upper rankings are the schools that want them, because those are schools that do a lot of celebrating.”

MEI builds the posts and ships them to the facility they will be used at. Then MEI sends a crew of three or four men who will put the posts in and show the people at the university how to do it, so that they can take them out, put them back and adjust them in the future.

According to Allen, the posts are of steel construction with machined steel parts; the core is machined steel and then there is steel pipe. The posts weigh approximately a ton and a half, but they are removable for maintenance. They go into the ground approximately 6 feet. There is a sleeve in the ground and they slide into the sleeve.

“The posts have evolved over time,” said Allen. “It’s somewhat like building a safe. If you build a safe, someone figures out how to crack it. Then you build it better, and they figure out another way to crack it. So it’s been an evolving situation.”

According to Allen, the fans can’t get the posts down simply with people.

“The posts that we’ve had problems with are those that fans have come at with tools,” said Allen. “In one case the fans used a fire hose at the stadium and wrapped it around the post. In another case they used chains that they found on campus. In two cases they used the television cables—approximately an inch in diameter—that were coming into the stadium. If you have enough people on the end of a 100-foot-long cable, then you have more people than could actually climb on the post. So we’ve informed [school officials] that they can’t let people get out there with tools, equipment, ropes, and chains.”

Allen explained that the way the posts are built, even if they do bend, they don’t come down.

“Accidents happen if a post goes down really fast and people are crushed in the fall,” said Allen. “Or you get a bunch of people on a post and all of a sudden it goes over, whereas, with our steel posts, the steel won’t buckle. It will bend, but it won’t buckle. Even though the fans have been able to bend them, there has never been a situation in which people have been in danger. That’s a big issue for the schools, and they understand that. If the fans bend it, nobody is going to get hurt in the bending process.”

“They’re not cheap. For just the goal posts alone without installation is about $20,000. But you don’t have to lose many goal posts to justify that cost.”

John Knitta is Senior Editor of SPORTSTURF magazine. He can be reached via e-mail at jknitta@mail.aip.com.
GOOSENECK GOALPOSTS

Future Pro has gooseneck-style football goalposts in high school and collegiate dimensions. These 4 1/2-in. gooseneck posts bury 48 in. into the ground for stability. Future Pro does offer ground sleeves for removable installations. Posts have a 60-in. setback and 20-ft. aluminum uprights. The crossbars are 3 1/2-in. steel tubing. Safety yellow powder coating is offered on both collegiate and high school dimensions, white powder coating on high school only.

Putting on the pads

AN ESSENTIAL ITEM for any goal post is the padding. According to Jim Bernecker, vice president of marketing at Promats, a Fort Collins, CO, manufacturer of protective field wall padding and related equipment, there are essentially two types of goal post padding: round cored-out foam and hexagonal pads.

"What was always the case was that you would take a round piece of foam, core it out to whatever diameter pole you had, and make a vinyl wrap," said Bernecker. "The foam had a slit in it. You would wrap the foam around the pole, then put the vinyl wrap around the foam and attach it using Velcro or grommets.

"But whatever goes down the posts gets into that foam. If it is in Florida in the humidity, then the foam is exposed to the elements. Unless you take it down and put it away properly—and nobody really gives a goal post pad any attention—they will rot and stink."

Last year Promats introduced a hexagonal pad that has flat sides. The foam is beveled appropriately for whatever size post. The hexagonal pad folds flat for storage and also creates a flat surface for graphics. There are several ways to apply the graphics: enamel for hand-painted graphics, silk screening, vinyl tape and sewn-on vinyl.

The hex pad completely encases the foam in vinyl. However, there are companies that make round pads completely encased in vinyl, so complete encasement is not specific to a hex pad.

"The 18-ounce coated vinyl used in a goal post pad is a heavy, tough material," said Bernecker. "And it is easily repaired if it gets torn. You can patch it with vinyl-to-vinyl cement, and it is as strong as a sewn seam if done properly. If somebody gets a tear in a goal post pad, if it's quickly repaired it will never affect the internal foam. But people need to do it before it gets wet."

As for the foam itself, Bernecker points out that not all foam is alike.

"You can have 3 inches of foam with 10 different densities, so the density of the foam is a big deal," said Bernecker. "The NFL wants 6 inches of foam, but you could have 6 inches of foam that won't react to impact any different than 2 inches of foam. The foam density is an issue that gets into indentation load deflections and pounds per cubic foot, but the bottom line is based on what we know works."

- John Emitta
DEBRIS, LEAF PUSHER

SweepEx has introduced its new debris & leaf pusher attachment, ideal for leaves, cans, and bottles. This pusher basically adds a strong net to the broom attachment that allows you to carry more material farther. The pusher bolts to the front of any SweepEx Pro Series broom, which are available in 48-, 60-, 72-, and 90-in. lengths.

FOOTBALL FANS REVEL in the touchdowns, the passing game, and the power rushers. Few, however, realize the importance of the kicking game. The same is true from a historical standpoint.

American football as we know it began very similar to its ancestors, soccer and rugby. Early matches emphasized the kicking game. But throughout the years the importance of the "goal from the field," or "field goal" as it came to be known, has changed. In 1882 a field goal was worth five points. In 1904 it was changed to four points. And in 1909 it changed to the current 3 points. As the game evolved, so too did the goal posts.

According to Kent Stephens, collections manager at the College Football Hall of Fame in South Bend, IN, records show that the goal posts used in 1873 were simply two poles 25 feet apart.

"In 1876 rule number 4 in the football rule book required that the goal posts be 11 feet in total height, 18-feet 6-inches wide and the cross-bar be placed 10 feet high, which only allowed for one foot over the cross-bar," said Stephens. "By 1890 the uprights had to be 20 feet in height. In 1959 college football widened the posts to 23 feet 4 inches. And in 1991 the posts were moved back to 18 feet 6 inches."

According to Gene Henshaw, president/GM of Stackhouse Athletic Equipment, a Salem, OR, manufacturer of athletic equipment, Stackhouse has been making goal posts for 30 years and has used steel and aluminum for the duration of those 30 years.

"Prior to that, going back to the 1940s and 1950s goal posts were wood and in the H style," said Henshaw. "In the late 50s or early 60s goal posts trended toward steel or aluminum."

Stephens could not pinpoint an exact year in which the last stadium switched from wooden goal posts to steel or aluminum, but added that the Rose Bowl was still using wood as late as 1969.
