WaterWick's patented gravel-vein injection system creates a permanent answer to chronic wet turf problems. So the game goes on without delay.

• Improves drainage and aeration
• Fundamentally non-invasive. Treated turf is immediately ready for play
• Proven in golf course, sports turf and landscape applications

Low-compaction WaterWick unit is ideal for golf greens and other fine turf. Or choose our innovative 3-point hitch system for your tractor — it injects WaterWick drainage, trenches, pulls pipe, lays wire and more.

WaterWick®

Don't let wet turf bag you down. Contact WaterWick. 888-287-1644 • www.waterwick.com

Fence Guard™ protective covers for chain link fencing from Partac Peat Corp. are available in six colors—safety yellow, dark green, red, white, blue, and orange—as well as two grades—premium and standard. These UV-resistant, polyethylene covers protect players from injuries and provide a distinctive look to your fencing.

Fence Guard™ comes in cartons of ten 8-ft. sections with fifty 8-in. UV-resistant ties for securing every 2 feet to fence. With a 5-year manufacturer's limited warranty.

For safety and uniform appearance, you should remove crowns from the tops of fence posts so that the entire fence top is covered; ends can be butted or overlapped, and the product is easy to cut.

Bottom Guard™, which serves the same safety and appearance purpose, also reduces erosion and eases weed cutting.

The only PTO powered aerator on the market. The Aera-Vator uses a patented vibrating action to fracture the hardest clay or the most compacted turf with ease. You can aerate established turf, incorporate soil additives or prepare the ground for laying sod. The Aera-Vator comes with an optional seed box for over seeding or primary seeding. This unit comes with a swing hitch that allows the operator to turn without tearing established turf.

The Jaydee Drive Liner is a self-propelled riding line marker. The 35-gallon paint tank carries enough marking material for a complete game field, or several practice fields. The 2-gallon flush tank cleans the discharge lines for work breaks, travel, or overnight. The center or side-mark spray shields are always operator-visible. A nearly zero turning radius reduces or eliminates back and turn maneuvers.

How to put down hash marks and boundary lines in less time!

E-100 Marker with Paint Boom provides one-pass lining, reduces the need for stencils and personnel.

Providing field maintenance staff and volunteers with labor- and supply-saving equipment, accessories, and information.

PAINT BOOM FEATURES
• Lightweight reinforced high-grade aluminum construction
• 6" x 24" paint box with easy nozzle access and visibility
• Steel mounting bracket for quick attachment and adjustable height
• Two quick-release wide angle spray nozzles for overlap coverage
• Easy striping operations from the standard handlebar control lever

TRU MARK
Athletic Field Marker

Kifo has introduced a line of Turbine Drive Water-Reels® to complement the popular line of Bellow Drive machines. These self-traveling sprinklers are ideal portable irrigation systems for all types of turf grass. Machines are available for both large and small areas. Water-Reels® are compact, easy to use, operate unattended and shut down automatically. Kifo has specialized in traveling irrigators for more than 35 years.

Two tales of tall fescue

I am the relatively new Director of Operations for a large school district in central Illinois that recently completed building a new high school complex. During construction the "what type of sod/seed?" question arose regarding the soccer field. We have an existing field that is primarily Turf Type Fescue. We have had very good performance on this field with respect to ball roll, turf recovery, and mowing height. But all the turf "professionals" in our area indicate that turf type fescue would be an undesirable turf for soccer because it had an insufficient root system and tended to become "too clumpy" to allow recovery after play. They said finding turf type fescue in a sod would be very difficult, if not impossible. The consensus was that since we have an irrigation system, a sports blend of 4 to 5 bluegrasses would be preferable. Is there an "industry" opinion regarding which type of turf makes the best fields for soccer competition?

James Lovelace

I guess I fit your category of turf "professional" but let me weigh in on both sides of this issue. I have clearly straddled this fence before and knowing which way to dismount requires consideration of several factors. Species selection is very important, but it needs to be considered along with other factors such as: irrigation, commitment to reseeding, desired field performance and mowing height, amount of traffic, and your case prior experience.

Prior experience. You indicated that turf-type tall fescue has performed very well in the area of ball roll, turf recovery, and mowing height. If it ain't broke don't fix it. We all learn from local experience and if this grass has worked for you in a similar situation then I would certainly be inclined to stay with what is tried and true. That puts one leg on your side of the fence. I have had good success with turf-type tall fescue on soccer fields when I am assured of three things: automatic irrigation, reasonable traffic control, and a commitment to annual reseeding to maintain cover and prevent clumping. Aerification, fertilizer, and routine mowing should not be limiting. Because of your successful experience with turf-type tall fescue in this situation I would not dissuade you from using this grass.

Tall fescue too clumpy. Turf pros, myself included, will caution you with this grass because we have all probably been exposed to situations where it has become very clumpy; and for soccer this is a disaster. We tend to remember disasters.

My worst memory of trying to defend tall fescue was in front of a group of soccer boosters (now known as soccer moms) that invited me down to Jefferson City, MO, to see the field that they had installed one year after following my recommendation to plant tall fescue. I was expecting some wonderful compliments but after my first glimpse of the field I knew I was dead meat. I was no match for the ire of a 5-foot-4 inch lady with a pixie haircut who frequently pointed with an extended index finger as she noted my inadequacies related to turf recommendations.

That was more than 10 years ago and to this day I still give the disclaimer that "tall fescue in some situations may result in a clumpy and undesirable surface, especially in sports like soccer and baseball where ball roll is important." Tall fescue is a very deep-rooted, drought tolerant, and wear tolerant bunch grass. These combined traits sound wonderful but can easily lead to a nearly unplayable surface in some situations.

Under dry or traffic conditions the tall fescue clumps will grow very well while the other cool season bluegrass and ryegrass become dormant, worn, and flat, thus exaggerating the tall fescue clumps. It is critical to supply enough irrigation, reseeding, aerification, and traffic control to avoid tall fescue clumping. If a tall fescue field begins to clump it will not recover on its own because it is not a spreading type of grass.

Grass choices. In your area Kentucky bluegrass is more widely used for soccer because it tolerates lower mowing, forms a denser turf, and seldom clumps even when the field is sufficiently worn to expose soil. With these considerations I must clearly put the other leg temporarily on the other side of the fence in favor of Kentucky bluegrass. So here we sit, no decision, and in a precarious position straddling the fence.

Decision time. I always weigh in heavily on the side of experience, and in this case your previous success with tall fescue is more important than all of the failures some of us have experienced in other settings. In your case I vote stick to your guns and stay with the tall fescue. Plan on reseeding with more tall fescue and some ryegrass if needed to keep the density and the field fill-in when needed. Avoid using Kentucky bluegrass in the mix since it has poor seeding traffic tolerance and it will only add to the clumping effect of the fescue. Our reseeding traffic trials indicate that perennial ryegrass is the best, followed closely by tall fescue, with Kentucky bluegrass a distant last. Your irrigation system will not be wasted, since it will be very useful each year in the recovery of a tall fescue field. Don't think that because turf type tall fescue is drought tolerant it doesn't need irrigation for soccer.

Have Questions?

Send them to Dave Minner at Iowa State University, 106 Horticulture Hall, Ames, IA 50011, or email dminner@iastate.edu. Or, send them to Grady Miller at the University of Florida, PO Box 110670, Gainesville, FL 32611, or email gmiller@mail.ifas.ufl.edu.
French drains will fail but Multi-Flow delivers long term performance and at half the cost!

Old fashioned French drains are expensive, labor intensive, disruptive, and prone to premature failure. For about half the cost you can install a superior system. Multi-Flow, with its thick, needle-punched, polypropylene filter, encased in coarse sand will last and last and last!

Install Multi-Flow without select backfill, and you will have a quality drainage system with a life expectancy similar to that of a French drain for about half the cost and half the hassle. But add the optional select sand backfill to Multi-Flow, and you have a system with proven longevity.

Send drainage worries packing and enjoy superior performance and longer life at half the cost.
