dent irrigation professional.

Irrigation consultants should have a thorough understanding of various system components: backflow preventers, pump stations and controls, control valves, piping and fittings, sprinkler heads and irrigation control systems and how they operate as a system. As important as irrigation equipment selection is to the performance of a system, good selection alone won't ensure that an irrigation project succeeds. These system components must be properly installed and work in concert to address specific site demands.

It can't be over-emphasized that a large-scale irrigation installation involves much more than planting equipment into the ground. In addition to the above-mentioned considerations, a quality irrigation system installation should reflect the diversity and skill of various additional site specialists, including property owners and managers; plant suppliers; landscape architects or designers, managers and maintenance contractors; engineers; and irrigation designers and managers. This group of specialized professionals must work in step to create a sustainable, aesthetic visual presentation within a reasonable budget and timeline.

The scope of such a project requires detailed knowledge of each professional's role, as well as general project oversight and coordination - thus the recommendation to explore the services of an independent irrigation consultant. The larger the project, the greater the opportunity for irrigation efficiency and performance and the greater the margin of error that can result in expensive water waste, hardscape and plant replacement, and fiscal accountability for a poorly performing system.

Remember too, that the more involved an installation contractor or irrigation consultant is at the project's planning stage, the greater the opportunity for success. Pre-construction meetings are a great place to garner an increased understanding of the overall project and the people involved. At that point, the installation contractor can have walked the site and taken field measurements, so any design and installation concerns can be addressed prior to construction.

In addition to the actual installation, contractors and consultants have a critical role in filing the appropriate construction documents at the appropriate time. Although it seems rudimentary, "misfiling" legal paperwork can instantly shut down a project.

After developing a reasonable level of confidence in prospective contractors or consultants, how do you make your final selection? References. Certification, insurance and bonding, and active participation in professional organizations hint that a company takes its business seriously. But ask for references and follow up with phone calls. Successful track records are important in this business.

Luke Frank is a veteran writer on irrigation topics. He can be reached at lukefrank@earthlink.net.

UnRoll Your Own!

BlueYellow features premium seed and fertilizer precisely calibrated in a biodegradable roll.

Engineered Turf System • www.blueyellowpro.com • 800-667-3268
Posi-Products has a no crimp, reusable, "water-tite" connector. Just strip wires and hand tighten for a perfect connection, says the company. Eliminates tools, labor, and failures. The company has been manufacturing patented No Crimp Connectors since 1996.

Irritrol Systems' new PRO-VAN variable arc nozzles feature an exclusive, ergonomically advanced "Smart Grip" design that makes arc adjustment fast, simple and pain free, even when wet. A special ribbed edge on the nozzle top that provides a firm grip, as well as a smooth turning action that delivers accurate arc adjustment from 0-360 degrees with no tools. A visible right-stop arrow on top of the nozzle ensures further setting accuracy with no need to pull up the riser or bend down to view the nozzle opening. Plus, as the nozzle arc is opened, the arrow moves to show the location of the left edge of the nozzle spray.

NELSON CONTROLLER
Nelson introduces the EZ Pro Jr. Series (8300 Series) of irrigation controllers for light commercial applications. The 8300 series has been designed with an emphasis on easy and flexible programming; additional features like "Event Days" per program or "Percent Water Budget" per month provide the capability to improve watering efficiency while promoting water conservation.

welcome to the future of green replication

When it comes to green replication, not much has changed over the past several years...until now.

Introducing the entirely new GradeMaster 3D Grading System. This box scraper automatically restores greens and other contoured areas to their original state, allowing you to maintain and refinish with unparalleled accuracy and efficiency.

Using Trimble machine control technology, the GradeMaster 3D allows contractors to topo the existing surface and recreate the original design once work is completed.

The GradeMaster 3D offers a comprehensive, automated process to return greens to their original design specs.

If you would like to learn more about this revolutionary grading system, click on www.laserleveling.com for more information.

Enhance your career during show season

BY MIKE ANDRESEN, CSFM

As the state, regional, and national trade conference season picks up steam this month it is important for us to realize they offer a great opportunity to progress our professionalism and skills. Conferences are a perfect time to renew old friendships and introduce yourself to new industry friends. Networking is very important and very rewarding. Of all the “green” industries, ours may maximize the networking as well or better than any other.

Whether your budget allows you to attend one or many trade show conferences, there are things you can do to not only justify your attendance to your administration but to also help you maximize the opportunity. I contend that we too often fail to come prepared to receive the maximum benefit from our conference and exposition experience and we too often fail to report back to our administration the importance of our attendance. Writing up a small summary of how each conference will benefit your operation is vital in securing the next opportunity and positively reflects on you as a professional, ultimately making you a more valuable employee.

In the weeks before attending a conference I look at the schedule of speakers and topics closely to determine my “must see” sessions. I keep in mind the short-term issues of field and facility management that I’m directly responsible for and highlight those talks that will address immediate concerns. Each of us also has an idea of our administration’s long range goals and plans. Sessions that may help me become a more valuable asset when planning for the future are also circled as “must see.”

I have a responsibility to upgrade my value to my employer when presented that opportunity and conferences offer this chance. Come to these sessions with an idea of how they can benefit you and have an idea of key questions or issues you’d like to ask. Being prepared to soak in the presentation, actively pull expertise from it, and adapting it to your real world future helps us be engaged in the presentation and collectively allows the presenter to connect with the audience and put his or her best effort on display.

Trade shows and expositions are something that we certainly overlook and underestimate! In this era of electronic shopping and information gathering it is easy for attendees to forego this important opportunity. Commercial representatives are experts on their products and services. An initial discovery from an online search can help you develop questions about a product but talking face-to-face with a company representative will give you the chance to touch, sit on, or feel a piece of equipment that interests you. Many times I’ve come to a trade show booth with an entirely incorrect perception of the “how and why” of a product or service. Oftentimes we don’t have an immediate need for the represented product or service but can predict a future need at our facility. When the time comes to act on the future purchase or contract you will already have a basic understanding of the need or issues and hopefully you will have developed a relationship with a trusted industry professional that can help guide you through the upcoming process.

We also have an obligation to our employer to take full advantage of new technology, new services, and cutting edge ways of thinking about our jobs. Vendors are one of our greatest resources. They travel the region and the country, sometimes the world, observing successful and unsuccessful operations. Their success depends on our success as sports turf and facility managers.

I know that too many of us see commercial representatives and sales professionals as adversaries. The fact is because of their travels, expertise, and experience we can learn a great deal about being a better turfgrass professional from them. Vendors, as well, have a great opportunity at trade shows to help add to the conference education experience and develop long-term and valuable relationships. Seldom has a trade show “hard sell” been rewarded with a written up sales ticket from me!

My interest in the trade show is to experience the existing and cutting edge technology available to me as a sports turf manager, and to maximize the chance to develop solid professional relationships with those with the same interests. The relationship between commercial representatives and sports turf management professionals is symbiotic. Each vendor feels their product can be beneficial in our quest to produce safe and aesthetically pleasing playing fields and facilities. Without properly examining each of the products and services we cannot be sure we are doing all we can to ensure the same. Just as we incur a financial expense to attend conferences and upgrade our expertise, commercial representatives also incur costs in support of that same upgrade in our expertise. Supporting those that support us by purchasing their goods and services ensures that our entire profession remains healthy and full of committed professionals.

I encourage you to evaluate your next conference packet and realize that there are potential teammates within both the academic and the exposition sides of the profession. My administrators feel the time and expense to attend conferences is worthwhile in my professional development as well as the development of our program. It’s important that I acknowledge that importance by way of a short summary of its significance upon my return from each conference. We do need all the teammates we can gather throughout our journey of sports turf management and I encourage each of us to prepare for this conference and exposition season to maximize our opportunities to grow and become the best professional we can be. To our friends on both sides of the table I wish you a productive and safe conference season.

Mike Andresen, CSFM, is Athletic Turf Manager, Iowa State University, Secretary of the STMA Board, and a member of our Editorial Advisory Board. He can be reached at mandrese@iastate.edu.
The world's eyes were on Greece for the 2004 Summer Games, where the best athletes came to prove themselves worthy of gold. Sports Turf Managers Association past president Murray Cook led The Brickman Group's design and management services on the Helleniko Baseball Centre in Athens. "These were the best playing surfaces the sport has had since becoming an Olympic sport," said Aldo Notari, president of the International Baseball Federation.

Brickman's Sports Turf services has seen its share of "Olympic Gold," having worked in a similar capacity on the stadiums for the 2000 games in Sydney, Australia and the 2002 Baseball World Cup in Taiwan, while looking ahead to the 2008 games in Beijing, China.

"Aside from the rough terrain, one of the major challenges with the Athens project was working with a crew of native talent who had never seen a baseball game," said Cook. A Deputy Competition Manager with the Athens Olympic Committee, Cook was probably the best authority to teach the crews what they needed to know to build and maintain the fields. "We had to explain to volunteers many things we take for granted: what is a drag, what is a rake, what is a tamp, and what is a base, even."

Converting the site was the other challenge. It was no small feat to take an abandoned World War II airfield and turn it into a world class playing surface. "This field had seen two World Wars," says Cook. "When we began excavating, we discovered ordnance deep under the runways. Every time we turned over another piece of tarmac we'd have to call in the army to check everything out."

Cook says they unearthed six bombs, both German and British, in the first phase of construction.

Once the Games opened, Cook's job was far from over. He and his team were on site to supervise the competition schedule and ensure the field and maintenance operations ran smoothly.

"In all my 20+ years of playing international sports, I would rank this facility and playing surface at the top of the list," said Dusty Rhodes, manager of the Greek National team.

**HOME PLATE**

**MODULAR SOCCER GOALMOUTH**

GreenTech’s patented modular system is an innovative technology that provides solutions to problems associated with the design, construction and maintenance of horticulture and turfgrass projects. Here we illustrate the GreenTech Modular System used as a soccer goalmouth.

Modular construction allows new mature, well-rooted turf, to be replaced, in worn, high-traffic areas, such as goalmouths. This eliminates the need to constantly re-grass the area with sod that does not have time to become fully established.

*Modular Soccer Goalmouths...by GreenTech!*

---

**TURF BLANKETS**

Protect turf from winter damage, promote rapid seed germination and root growth, and encourage early “green-up.” Used by NFL teams and at Super Bowls, Typar turf blankets are available in standard and custom sizes and in special grades for northern climates, transition zones, and southern climates.

**SPORTSTURF** • http://www.greenmediaonline.com
CORD REEL
Disorganized, tangled and unruly extension cords and hoses can cause frustration and waste time. A simple and inexpensive solution to cord and hose organization called Cordpro is now available. Cordpro is a flexible, yellow, doughnut-shaped reel that divides, stores and dispenses extension cords without springs, ratchets or motorized mechanisms. Because Cordpro has no moving parts it can’t break down. Unlike other automatic dispensing reels, it will hold a full 100-foot length of cord and also stores and protects cord-ends when not in use.
BurkTek, Inc/800-700-6784
For information, circle 124 or see http://www.oners.ims.ca/2917-124

SIDELINE PROTECTION
Reduce or eliminate the destruction of your turf along the sidelines with this 100 percent recycled polypropylene blanket. The blankets breathe and allow water and light to penetrate through while protecting your turf. Available in five standard sizes or can be custom-sized. Logos can also be applied to the blanket material for a more colorful display of sponsors, team logos, or advertising.
Beacon Athletics/800-747-7797
For information, circle 057 or see http://www.oners.ims.ca/2917-057

ALGAECIDE
Radiance is the first algaecide that can give you preventative control of algae blooms in ponds, lakes, and fountains. The active ingredient is a biologically active form of copper held in a proprietary carrier. Radiance self-disperses from a single application point and remains suspended in the water column where it destroys offending algae for up to a month. Product requires no mixing or agitation, and does not need to be sprayed across the entire surface like other copper-based products.
Aquatrols/800-257-7797

**Quick Repairs**

Evergreen is widely used as a winter turf blanket to protect grass against winterkill and desiccation. It is equally effective to make rapid turf repairs for heavy wear areas on sports fields. The product works by creating a greenhouse effect, allowing grass to breathe and retaining the right amount of heat and moisture. Because Evergreen is super lightweight, even large size covers are easily handled.

Covermaster/800-387-5808

---

**Seeda-vator**

Seeing is believing!
Call for a free video!

The SE-60 Seeda-vator is the only seeder on the market today with the flexibility of primary seeding or overseeding with the same machine. The unit has a patented swivel hitch that allows the operator to turn around objects without tearing established turf. The cleated roller can be pinned to gage tine depth. The SE-60 uses patented vibrating tines to fracture the soil, resulting in an ideal seedbed. The Seeda-vator comes with either ground driven or electric drive seed hopper.
