**Jaydee Drive Liner**

The Jaydee Drive-Liner is a self-propelled riding line-marker featuring a 13.5 h.p. Briggs & Stratton engine, along with a 3.3 gallon remote fuel cell, a 35 gallon paint tank that carries enough marking material for a complete game field, or several practice fields. The 2 gallon flush tank cleans the discharge lines for work-breaks, travel or overnight. Center-side-marking spraysheilds are always operator visible. A nearly zero degree turning radius reduces or eliminates back and turning maneuvers.

---

**Supreme-Green™ Turf Growth Cover**

Supreme-Green is a multi-purpose turf growth cover made of a specially designed material to provide early green-up, accelerated germination and winter protection. The Supreme-Green cover encourages root development and rapid growth while extending your spring and fall seasons.

Supreme-Green turf growth cover is specifically engineered to promote earlier openings by 2-3 weeks.

- Reduces seed loss
- Promotes earlier root establishment
- Accelerates germination
- Reduces frost and ice damage
- Permits to allow water and air circulation
- Minimizes root and rot resistant
- Quick turf repairs

Specifications:
- Made of tough woven non-coated polyethylene material
- UV treated for long life
- Green tint for best heat build-up
- One piece construction
- Comes complete with anchor pins and storage bag

Fence Guard™ protective covers for chain link fencing from Partac Peat Corp. are available in six colors—safety yellow, dark green, red, white, blue, and orange—as well as three grades—premium, standard and lite. These UV-resistant, polyethylene covers protect players from injuries and provide a distinctive look to your fencing.

Fence Guard™ comes in cartons of ten 8-ft. sections pre-drilled for securing every 2 feet to fence. One hundred 8-in. UV resistant ties are included.

For safety and uniform appearance, you should remove crowns from the tops of fence posts so that the entire fence top is covered; ends can be butted or overlapped, and the product is easy to install.

Other styles also available, as well as windscreen, wall padding and portable safety fencing.

Managing Healthy Sports Fields

Session LE22

Pesticides on Turfgrass

Jay Gan, Ph.D., University of California, Riverside
Bruce Kidd, Dow AgroScience

Maintenance of high quality sports turf, including golf courses, rely on the adequate use of pesticides in order to protect against pests, and restore the competitive balance in favor of the turf. This session will cover two facets of pesticides on turfgrass. One will be the fate of pesticides in the environment and strategies for minimizing pesticide runoff and offsite movement. The other will cover cultural and chemical practices for managing specific weeds in turfgrass with various stressful conditions. Examples will be drawn from golf courses and professional sports fields, all the way down to your children’s beat-up soccer fields, with suggestions how you can help create and maintain a safer and better performing turfgrass.

Need CEUs - $30

Without CEUs - $20

Lessons learned in 25 years with STMA, Part IV

Lesson #11: Keep records for ALL field activities/events and develop a field rating system. The only way to convince administrators and field user groups that you are experiencing too much traffic to maintain reasonable grass is to provide them with solid information about traffic levels and field performance. Sensible information that relates field activity to field conditions usually gets a reduction or rotation in activity or more resources to manage the excessive traffic; both will have a positive impact on your field management program. The message here is quit crying about field over-use and work with those involved to develop a reasonable plan for effective change. Here is more information on counting events/activities and rating your fields.

Lesson #12: Concentrate your resources by implementing a site specific management program. Identify high traffic areas on each field and concentrate resources on those areas to provide a better return on your investment. High traffic areas of a football field (10,000 sq.ft. center plus sidelines) that require more resources are usually 6 to 10 times smaller than the entire area in and around the field (60,000 to 100,000 sq.ft). If you are treating the entire field area with one management program then you can reduce input from lower traffic areas and increase input on higher traffic areas. High traffic areas require additional coring, seeding, fertility, topdressing, and specific herbicides that don't harm seedling turf. Amendments such as sand, calcined clay, compost, and crumb rubber are affordable if you concentrate your resources to manage the "field within your field."

Lesson #13: Rotate activity on overused fields. Develop a program where one or more fields are completely taken out of play for at least 1 year. Impossible you say? Then try this approach: Identify your fields that are overused. As an example, let's use four soccer fields that are intensely used spring and fall. All attempts at coring, drill seeding, and other reestablishment practices have not produced acceptable grass cover because there has not been a sufficient period of time for grass to reestablish and mature. Take time to explain to parents, coaches, and others that this 1-year period of rest is important so that a field can be used continuously for the next 3 or 4 years.

Don't announce at the beginning of the soccer season that you want to renovate a field and that it won't be available for play. Get involved instead in scheduling for the entire soccer league. Find out when they have their first meeting so that you can present your plan for providing a safer facility by removing one field each year for renovation. Try not to accept any period less than 1 year for resting the field. Explain that 95% grass cover may occur 2 months after seeding but it will take at least 1 year for plants to produce enough biomass to form a protective mat of grass that is more traffic tolerant and shock absorbing. Insist that a game schedule for next season be produced without using the field that will be rested for renovation. Once the schedule has been set without using the "rested" field then you're home free. If you approach the planning committee after the game/practice schedules are set, they will be reluctant to change the schedule to rest a field. Next year repeat the process; play on three fields and rest one field. This 3-year rotation will improve the playing conditions of all fields.

Sodding is preferred when reestablishing the "rested" field. Don't compromise the renovation process by sodding and then allowing play before the full 1-year rest period is over. Stick with the plan so that your committee can develop a consistent policy for game and field scheduling. Take a positive approach by letting the committee know that they will be directly affecting field conditions by using their expertise to make the schedule work with one less field. Acknowledge that their dollars spent on seed, coring, and other materials will be more effective since the "rested" field won't wear out as fast as the others. Avoid using the comment, "It will sure make my job easier," since some may perceive that to be a sign of laziness. What is actually meant is that your time and resources spent on renovation will be the same, but the field performance will be substantially improved.
Designers, engineers, field managers, and contractors have agreed with us for years: successful water management is at the core of successful athletic field projects. That's why Multi-Flow provides innovative drainage designs, prompt personal service, as well as unrivaled drainage systems. With a Multi-Flow drainage system in place, you can trust that your athletic field is built on a firm foundation.
