really tough to get out and get any maintenance projects done," he says.

McCarty derives his greatest pleasure from "just being outside around sports and the kids. I have been a sports guy all my life and when we crown a tournament champion or a state championship team, the excitement from the athletes and the parents is amazing," he says. "The memories that are made here will be remembered forever and I am just glad to be a part of that. I am always pleased to hear someone say that they can't wait to come back. The preparation that goes into a big game or tournament sometimes seems overwhelming, but when it all comes together and everything looks great before the event, that's a great feeling."

Like all turf managers, McCarty is beholden to Mother Nature. "The biggest headache has to be the same for me as it is for many others - the weather. It plays such a critical role in everything," he says. "The toughest decisions I make are based on weather."

---

If you would like to submit a photograph for John Mascaro's Photo Quiz please send it to Turf-Tec International, John Mascaro, 1471 Capital Circle NW, Suite # 13, Tallahassee, FL 32303 or email to john@turf-tec.com. If your photograph is selected, you will receive full credit. All photos submitted become property of SportsTurf Magazine.

Answer:
from page 27

The brown parallel lines running across this soccer field appeared in early January 1989 on this high school field in South Florida. When the supervisor for the school board maintenance department first saw the damage, he was puzzled. The brown lines were not only parallel to each other, but also appeared on both sides of the center of the field in uniform distance. There were also numerous other lines that were not brown, going across the field, sideline to sideline. After further investigation, it turned out that the field had been used for the Super Bowl XXIII halftime show practice entitled "Bo Bop Bamboozled," which was also played in South Florida that same January. The halftime show practice was mostly done during Christmas break when the students were off the field and the maintenance department was not informed of the practice until after the event.

Photo submitted by Ed Birch, retired maintenance supervisor for Broward County School Board, Ft. Lauderdale, FL.
The three most important reasons for you to join STMA:

1. Job security
Take advantage of STMA's programs and services, and you proactively enhance your value to your employer.

2. Career success
The knowledge, skills and abilities you gain by accessing STMA's education and information can help you to prepare to take that next step in your career.

3. Recognition of your professionalism
STMA's advocacy with groups such as athletic directors, parks and recreation directors, coaches, and parents enhances the image of the entire profession.

The top three benefits you will receive as an STMA member:

1. A network of peers who are willing to share their best practices.
2. Opportunities for education to help you do your job better.
3. Quick access to information and resources to help you save time.

A Huge “Thank You” to our SAFE Foundation contributors

In 2006, The Foundation for SAFE Athletic Field Environments (SAFE), STMA’s charitable arm, received more than $66,000 in donations. SAFE provides funding for scholarships, research and education.

Leading the donations was Jacobsen, which generously sponsors the Jacobsen/SAFE golf tournament at the annual conference. Another major contributor is The Toro Giving Program that provides two scholarships in honor of Dr. James Watson, a longtime industry researcher and consultant.

The generous contributions to SAFE allowed The Foundation to award scholarships to 10 two-year, four-year and graduate students this year and fund continuing education to the 2006 STMA annual conference.

Our two-year program has a special scholarship named in honor of Dr. Fred Grau, who was the first turfgrass extension specialist in the U.S. Ed Schmaeckenberger, Mt. San Antonio College, is this year’s Grau Award recipient. Other two-year winners are Chris Romo, Mt. San Antonio College, and Brian Sayers, Michigan State University.

Four-year Scholarship winners included the Dr. James Watson Scholarship recipient, Will Jellicorse, University of Tennessee; Amy French, Michigan State; Jared Knodle, Michigan State; Tyler Mittlesteadt, Tennessee; and Anne Bedingfield, SUNY-Delhi.

Graduate Scholarship winners included the Watson recipient, Adam Thoms, Tennessee, and Thomas Serensitz, The Pennsylvania State University.

Contributors to the SAFE Foundation in 2006 were:

**SOUTHERN CALIFORNIA CHAPTER**

Number of Members: 95  
Chapter President: Mike Tarantino  
Dues: Professional $35; Commercial $100; Student $10  
Publications: Two quarterly newsletters

**SoCal Focuses on Community Service**

Have you ever done anything for somebody that made you feel really good? Is your local chapter doing any community service work?

For the past three years the SoCal Chapter has undertaken community service projects. The chapter started out by rebuilding Vista High’s varsity baseball field, followed by two local Little League fields. Most recently, the chapter re-built Hoover High’s varsity baseball field: aka Ted Williams’ Field.

The planning, organizing, soliciting support, and then doing the work are demanding and require the support and commitment of the entire Board and the chapter. Planning begins immediately after the Annual Meeting in January and continues until the work begins.

It is amazing the amount of support that is out there for these types of projects, from national to local suppliers, Chapter members to non-members, everyone comes committed and ready to work. The days are long and the work is hard, but the rewards are well worth it. Mike Tarantino, president of SoCal, feels that these community service events have been the highlight of the chapter’s educational events and are very gratifying for the participants. “I will not forget the feeling I had after completing the Ted Williams’ Field rebuilding. It felt really good,” says Tarantino.

**Supreme-Green™**

**Turf Growth Cover**

Supreme-Green is a multi-purpose turf growth cover made of a specially designed material to provide early green-up, accelerated germination and winter protection. The Supreme-Green cover encourages root development and rapid growth while extending your spring and fall seasons.

**Supreme-Green** turf growth cover is specifically engineered to promote earlier openings by 2-3 weeks.

- Reduces seed loss
- Promotes earlier root establishment
- Accelerates Germination
- Reduces frost and ice-damage
- Porous to allow water and air circulation
- Mildew and rot resistant
- Quick turf repairs

**Specifications:**

- Made of tough woven non-coated polyethylene material
- UV treated for long life
- Green tint for best heat build-up
- One-piece construction
- Covers complete with anchor pegs and storage bag

Practice doesn’t always make perfect

The city of Chaska, MN has a very nice baseball field that is being used by the high school baseball team, city amateur team, and other baseball teams, including games and practices. Early spring practices by the high school are the latest addition. Usually they start using the field in late April when the temperatures are in the upper 40’s to lower 50’s during the day and 30’s at night. The games don’t seem to be the issue, but practices are at this time. Is there any advice or help that you can offer that can be shared with superiors?

Before we get to the story at hand please note that this question was offered by Jeff Schmidt of ProSource One on behalf of a city sports field manager, Brian Jung. Great job networking guys, and kudos to Jeff for placing service ahead of sales on this call.

Practice doesn’t always make perfect, especially if it’s on the game field. I write several letters a year maligning coaches and athletic directors for allowing practice to occur on the football game field, but with baseball there usually isn’t an alternative field dedicated for practice.

Most all baseball fields at some point serve as the competition game field for some level of play. In northern climates spring baseball activities start as soon as “they can get on the field” and that usually translates into no standing snow, water, slush, or soft foot printing conditions. Coaches usually push the limit by using mats on soft ground around the mound and home plate.

The net result with these early spring practices is that normal wear is occurring at a time when the grass is not growing and the soil is soft. This leads to soil compaction and removal of turf cover. Administrators need to realize that traffic on athletic fields is a cumulative type of injury. A field rating program can help you determine just how much traffic your particular field can withstand http://turfgrass.hort.iastate.edu/extension/EGtrafficsurvey.pdf.

There are no universal numbers that tell you how much traffic is too much traffic; you need to determine that by evaluating your own fields under your specific playing conditions. For a better understanding of how traffic influences grass, mat, and soil go to http://turfgrass.hort.iastate.edu/extension/EGtrafficscenario.pdf.

Recovery time on athletic fields is vital to maximizing playing conditions during the prime playing season. Most single team high school baseball fields will tolerate a spring and summer schedule involving both games and practices. Generally, competition games will take priority over practice activities. In this case there is also a priority that needs to be assessed between different leagues and with regard to special events.

Brian, like most field managers, doesn’t make this decision. When he asks to limit field activity it is not a personal attack on a user group, although it is often perceived that way, instead it is an integrated assessment of field agronomics, experience with seasonal traffic, and the expectations for field performance at different times throughout the year.

The field appearance and playing quality has vastly improved over the last few years since Jung and the City Parks Department have put additional resources into core harvesting, topdressing, seeding, and rolling. Jung credits Dale Welter, a volunteer field manager, for taking this field and caring for it through the worst example of poor condition. Jung also credits the Parks Department has put additional resources into core harvesting, topdressing, seeding, and rolling. Jung credits Dale Welter, a volunteer field manager, for taking this field and caring for it through the worst example of poor condition. Jung also credits the Parks Department for maintaining and improving these fields.

It’s important to prioritize field use and to assess the degree of field decline occurring from each user group. User groups tend to think in terms of a block of time that they are allowed to be on the field. In this case the high school wants to use the field for early spring practice. Field managers are more in tune to the growing season and how the traffic during specific blocks of time influences field playing quality throughout the season. Somewhere in the decision process a parks director must weigh the virtue of allowing spring practice against the added traffic that results in poor playing conditions later in the season; and in this case when a major event like the Amateur Championship is scheduled.

Kicking the high school baseball team off of the stadium field doesn’t solve the problem. The high school team and coaches deserve a place to practice as soon as the weather permits. There is a field at the high school but it is in poor shape, drains slow, and is seldom ready for early spring activity. I would work with the high school boosters and the City Parks Department to collaborate on a renovation of the high school baseball field and give the high school team priority use of this field for practice.

It may not work for Chaska but at other institutions we have installed a “short field” adjacent to the competition
