GRACO FIELDLAZER / PAINT SALE!

SAVE $1,045.00 ON OUR PAINT & MACHINE PACKAGE
WITH THE PURCHASE OF:
16 PAALS OF OUR 77-30 OR 88-30 BRILLIANT WHITE PAINT

* $300.00 GRACO BUCKS REBATE
* 16 PAALS OF PAINT
* FIELDLAZER COST OF $1795.00
* FREE FREIGHT FOR ALL

PACKAGE PRICE
GRACO FIELDLAZER & PAINT
#77-30KIT $2,514.20 OPTICALLY BRIGHT
#88-30KIT $2,674.20

THESE PAINTS ARE HIGH ENERGY FORMULATED FOR:
- GREAT ATOMIZATION
- SHARPE LINES
- EASY MIX
- LESS SETTLING
- LONGER SHELF LIFE
- HIGH SOLIDS

AEROSOL FIELD PAINT
- Brightest White
- 12 Brilliant Colors
- Low VOC’s
- Fits most machines

$44.95 / CASE $48.95/CASE
FREE SHIPPING
COLORS $48.95/CASE

"Deeper Roots with Less Water!"

SportsTurf MANAGERS ASSOCIATION
Online Training

STMA Members - $30 each
Non-members - $50 each

Session OCC1 - Schools K-12
  Speaker 1: Floyd Perry, Grounds Maintenance Services
  Speaker 2: Dr. Grady Miller, University of Florida
  Speaker 3: John Mascaro, TurfTec International
  Speaker 4: Dr. John Cisar, University of Florida

Session OCC2 - Parks & Recreation
  Speaker 1: Preston Courtney, Disney Wide World of Sports
  Speaker 2: Floyd Perry, Grounds Maintenance Services
  Speaker 3: Bill Berry, City of Rock Hill
  Speaker 4: Richard Sanger, Sarasota County

Workshop OCC3 - Developing A Master Plan
  Speaker 1: Francois Hébert, Consultant

Workshop OCC4 - Building Athletic Fields
  Speaker 1: Dr. Chuck Darnell, CLC Labs
  Speaker 2: Boyd R. Montgomery II, The Toro Company
  Speaker 3: Mark Henlen, The M&H Group

Workshop OCC5 - Fertilizer
  Speaker 1: Brad Jakubowski, University of Nebraska
  Speaker 2: Dr. Tom Sample, University of Tennessee

Demonstration OCC6 - Outdoor Demonstrations
  Speaker 1: Dr. Roch Gausson
  Speaker 2: Floyd Perry, Grounds Maintenance Services
  Speaker 3: Preston Courtney, Disney Wide World of Sports

More on Vandalism

BY DR. DAVID MINNER
Professor, Iowa State University

Questions? Send them to David Minner at Iowa State University, 106 Horticulture Hall, Ames, IA 50011 or email dminner@iastate.edu.

Or, send your question to Grady Miller at North Carolina State University, Box 7620, Raleigh, NC 27695-7620, or email grady.miller@ncsu.edu.

Last month Dr. Grady Miller presented valuable insight when dealing with physical vandalism caused by hooligans driving on athletic fields.

But what about those choosing a more sinister and calculated approach to abusing the fields we so dearly admire? Some of the products used by the culprits include: gasoline, diesel fuel, hydraulic oil, salt, paint, lime, herbicides, fertilizer, vinegar, baking soda, and an assortment of caustic cleaning products readily found in the home. Do a little investigative work to try and determine what was used to kill the grass. Look for any residue or odor from petroleum products, lime, or concentrated herbicides. It is likely that the application was made a few days before the turf phytotoxicity occurred.

Here are some tips when you suspect chemical vandalism has occurred:

- Since you don’t really know what you are dealing with, treat it as a pesticide or hazardous waste and use protective gloves, boots, eyewear, and clothing when contacting the contaminated area. Besides, those responsible for the crime could be liable for the expensive removal and disposal of a hazardous waste.

- Be sure to immediately report the incident to your administration. Since 9-11 the rules for dealing with vandalism and terrorism are changing. Not knowing what was applied to the field may influence administration’s decision to use the field for the next scheduled event. Pranks that result in canceled games can serve as a message to the perpetrators that this type of disrespect for the community will not be tolerated.

- Avoid the rush to flush — adding water may activate the contaminant or spread the product into the soil. Dry materials such as salt, lime, fertilizer, and paint dried on leaves can be swept, vacuumed, or scalp-mowed from the area. Damage caused by salt or fertilizer may benefit from dilution with water and leaching beyond the upper 6 inches of soil. Oil-based paints and most aerosol paints, not specifically formulated for turf use, will kill grass. A heavy dose of paint is often applied when paint is slapped on with a roller. It would be really nice if they would just use a latex paint mixed at 2 parts water to 1 part paint.

- Avoid grass graffiti. When obscene words or graphics are etched into the field by killing grass it may not be sufficient to simply replace the exact areas by seeding or sodding. It does not solve the problem if the objectionable words or pictures remain visibly distinct as a stand of darker healthier grass. Remove all of the area around the vandalism so that the repair will only look like a larger rectangle. Some more creative sports turf managers have painted extra logos over the damaged areas. A nursery using the same grass varieties and management regime is invaluable when making repairs that will cosmetically match your most important fields. Fresh grass clippings can also be scattered in a heavy dose over the damaged area to provide quick camouflage that nearly matches the rest of the field in color.

- Test the soil. When soil removal is not an option consider soil testing to anticipate any residual contaminants that will damage the new turf. A soil-testing lab can easily determine if salt levels are too high for plant growth. Testing for herbicide residue is expensive and will cost approximately $80 for each type of herbicide suspected.

I often use a simple do-it-yourself bioassay to help decide if soil contamination is a problem. Take a 6-inch deep wedge or core from at least two locations of the damaged area. Take one sample from the worst looking area to determine the worst case scenario. Split the core lengthwise from top to bottom without disturbing the layers of the soil profile. A 4-inch PVC pipe cut lengthwise makes a nice container for the bioassay. Place the core on the PVC pipe so that you can plant seed across the entire soil profile from top to bottom. Keep the soil moist and check it daily to observe seed germination and subsequent growth to see where the grass lives and dies; determine the depth of contaminated soil. Use a fast-germinating grass like perennial ryegrass. Cucumber seeds are also effective and do not solve the problem if the objectionable words or pictures remain visibly distinct as a stand of darker healthier grass. Remove all of the area around the vandalism so that the repair will only look like a larger rectangle. Some more creative sports turf managers have painted extra logos over the damaged areas. A nursery using the same grass varieties and management regime is invaluable when making repairs that will cosmetically match your most important fields.
