The irregular brown areas on this high school baseball field foul line area were caused by a volunteer parent/coach trying to help out. The school received some free artificial turf from a local college that was replacing their indoor football field and the baseball program decided to use a portion of the old turf for the high school bullpen (notice the hash marks). The natural turf was removed and since they did not want weeds or grass to come up through the artificial turf, a granular benzonitrile herbicide was applied under the carpeting for extra insurance. As you can see, after a good rainfall, the material leached from under the artificial turf onto the foul area of the baseball field and killed the grass. The person who regularly takes care of the field repaired the damage by aerating the damaged turf and then applying a combination of charcoal and a calcined clay field conditioner to neutralize the remaining chemical. The turf was then slit seeded. The inset photo shows how the area recovered.

Photo submitted by Mike Hebrard, Athletic Field Design Company, Clackamas, OR.
STMA unveils new certification logo

The Sports Turf Managers Association unveiled its new Certification logo at the Certification Breakfast January 17 during the STMA Annual Conference in Phoenix. The logo development process has taken many months. It began with the certification committee’s assertion that a more progressive logo would better represent the CSFM credential. The STMA public relations firm, Ackermann PR, took on the design challenge and strongly contended that the certification logo should relate to STMA and its “family look.” After reviewing many designs and color palettes, the Certification Committee led by Troy Smith, CSFM, narrowed the logo selection to two choices, and all 81 certified members were invited to vote for their favorite logo. More than 70% of CSFMs who voted selected this logo. Look for this logo on select merchandise and clothing items designed for certified members.

STMA's Certification program began in 2000 and is based on education, experience and industry service. In order to take the four-hour test to become certified, a sports turf manager must have a minimum of 40 points earned through a combination of education and experience. The CSFM exam covers agronomics, administration, pest management, and sports specific issues. Once certification is achieved, continuing education and industry service is required to maintain the designation.

SAFE thanks our 2007 Contributors!

The Foundation for Safer Athletic Environments (SAFE) thanks its contributors for their generous donations in 2007. The following notes the contributor and the facility at which they are employed. A second list notes the golfers who donated their paid golf fees to SAFE when the San Antonio tournament was cancelled last year. A special thank you to Jacobsen for matching the golfers' donations at 50 percent. Their donation has allowed SAFE to provide scholarship and educational awards at the same level as last year!
We've got a conditioner for every application. Which means less maintenance, less rain-outs, less wind erosion, less complaints and safer conditions at any level of play.

The STMA Historical Committee met in late November for the first time to log and develop the acquired collection of Dr. Kent Kurtz, STMA's first executive director. "Doc," as he was admiringly referred to, also served as the association's first historian, and amassed an amazing collection of documents and photographs of the sports turf profession and STMA. Doc's collection included a kind donation from the estate of turf industry pioneer Dr. Fred Grau. In appreciation of Doc's contribution and the generous donation of the Kurtz family to STMA we will be running a monthly account of the people, places, stories, equipment, and photographs that are important to the profession and association.

Hold on to your photos! Starting this spring, and in order to enrich Doc Kurtz's collection, the STMA Historical Committee will be running a contest each month to see who has the most unique pictures of sports turf specific equipment and significant STMA members. Look for details in this section in future issues!

STMA Founder Dick Ericson, left, with rake, worked for many years at Metropolitan Stadium in Minneapolis, a typical multi-use facility of the time that was used for baseball, football, and soccer. In this STMA Kurtz Historical Collection photo, Ericson can be seen overseeing his crew mowing, rolling, and painting the outfield in preparation for a game. The equipment in use is a 1950's era tri-plex style mower, roller, and a hand pump paint sprayer. Paint was often purchased at a local paint or hardware store and thinned with water to achieve a consistency that would cover evenly. The most affordable and most abundant latex house paints were used. Through trial and error and other research into paint and painting, sports turf managers and paint companies produced the quality products that are in use today.

Supreme-Green
Turf Growth Cover
Supreme-Green is a multi-purpose turf growth cover made of a specially designed material to provide:
- Early green-up, accelerated germination and winter protection. The Supreme-Green cover encourages root development and rapid growth while extending your spring and fall seasons.

- Reduces seed loss
- Promotes earlier root establishment
- Accelerates Germination
- Reduces frost and ice damage
- Permits to allow water and air circulation
- Mildew and rot resistant
- Quick turf repairs

Specifications:
- Made of tough woven non-coated polyethylene material
- UV treated for long life
- Green tint for best food build-up
- One piece construction
- Comes complete with anchor bags and stitched hood

You can't Tivo this stuff

You asked for advice and presented many challenging questions over the years... so now it's my turn to ask a question in the form of sound advice.

Did you attend the 15-19 January 2008 STMA Conference in Phoenix?

Good for you if you did and for the rest, here's a small part of what you missed. We hope to see you next year in San Jose, CA.

I'm on the plane trying to process new ideas gathered at the show into action items for my short and long term goals. Just a little Board of Directors' inside humor since CEO Kim Heck constantly shapes our thinking and vision into action and results. This absent-minded professor has personally grown in many ways from working with this board and its leaders. I would also like to thank all of you who have served on the conference education committee and to those who have given of yourself through your ideas, speaking talents, and commitment to spreading the good word about the sporting fields and their managers that we so dearly care about.

Please join me in welcoming Dr. Michael Goatley, Virginia Polytechnic Institute, as the academic representative on the STMA Board of Directors. Mike has the passion, energy, and talent to communicate at any level with a wide variety of sports field managers. With new leadership comes new opportunity; and it is time to share your ideas with your new Conference Education subcommittee chairman by making a submittal for the 2009 STMA Conference in San Jose. The call for presentations will be posted on the STMA website in February with a closing date of 1 April 2008 for the 2009 conference. Nearly 85% of the conference speakers are selected from the presentation submittals.

With 350 booths and more than 1850 combined participants and exhibitors, the STMA Conference is the largest trade show in North America dedicated specifically to managing athletic fields. Every conceivable product and type of equipment used to manage natural and synthetic fields is displayed at the show.

Chris Ralston, head groundskeeper for the Lake Elsinore Storm, teamed up with college and Major League Baseball turf managers to demonstrate mound building techniques on the trade show floor. They built the mound from top to bottom in about 45 minutes using Hilltopper donated by Stabilizer Solutions, Inc. Craig Karges gave an amazing blend of entertainment, message, and motivation. The audience used their minds to move individual pendulums and they were really freaked out when he levitated objects right before their eyes.

On the education side there were more than 50 educational sessions on topics such as budgeting, employee/administration relations, traffic injury solutions, weed and disease control, fertility, grass selection, preparing for certification, and much more. Randal Dick from the NCAA provided information relating athlete injury on grass and synthetic fields, while Dr. Keith McAuliffe from the New Zealand Sports Turf Institute rounded out the conference with an international perspective on playing field standards and testing performance.

Jeff Fowler had the audience spilling out into the hallway with his riveting oratory on the “Seven habits of defective sports turf managers.” Three sessions on synthetic turf management and field construction were discussed by panel experts; they even tackled the hot topic of how to properly construct the base under the synthetic surface.

The innovative sports field manager session showed Mike Hebrard's proven methods for freehand logo painting, Joe Wagner's first hand experience with using only effluent water to manage a large city soccer field complex in Iowa, and David Schlothauer’s tips for making minor repairs on synthetic fields. Kevin Trotta, winner of the Turf and Ornamental Communicators Association's Environmental Communicator Award, led a panel of experts and a roundtable discussion to find a balance between managing fields with fewer pesticide inputs and to bring some sense to the narrow minded approach of a pesticide-free policy that bans the use of all pesticides on all school grounds.

Field contractors Chad Price and Matt Heiss discussed sand cap and narrow sand trench systems and shared their proven techniques to avoid the most common mistakes when building baseball, football, and soccer fields. Outdoor field management techniques were demonstrated by Certified Field Managers from Major League Baseball/National Football League/Major League Soccer. Two days of tours were highlighted by a visit to the University of Phoenix Stadium where everyone touched the field as it moved on rails from the outside position to the game ready position for the 2009 Super Bowl. No predictions were made but the STMA participants became part of Super Bowl fever as the field was prepared for a new champion.

There is so much to see and do that you will be jazzed for a week after the meeting. Only at the STMA Convention can you see the largest moving field football field being prepared for the Super Bowl, the largest moving roof (Chase Field, Arizona Diamondbacks), and hear the stories from George Toma, a living legend in grounds keeping. All the gang will be looking for you next year in San Jose.
