LIQUID SPREADER

The Greens Wheelie by Wheel Spray Corp., is a liquid chemical spreader with

a unique ground-driven pumping system. The unit gives the sports turf manager the benefit of a boom-type spreader without the worry of engine maintenance.

The twin-wheel pumps on the WS-490 spray a fan of solution six feet wide at the rate of 1,000 square feet per gallon. The delivery of the spray is relatively unchanged by the speed at which the sprayer is pushed. The faster it is pushed, the faster it pumps. When the operator stops, the sprayer stops pumping. Shut-off valves on the handle grips let the operator control each nozzle separately.

The WS-490 features larger pneumatic rubber tires and a thick-wall ten gallon tank

with a wide mouth lid for easy filling and cleaning.

GET THE MAXIMUM FOR YOUR WATER DOLLARS.

Larry Keesen, Ltd., offers over 25 years of irrigation design and analysis experience and a national reputation for developing and presenting seminars, training programs and design schools for Toro, Rain Bird and Weather-matic. Keesen is a certified cost estimator and irrigation designer in commercial and golf course water systems. Currently president of the American Society of Irrigation Consultants, Keesen offers state-of-the-art technology and water conservation as specialties. Specific recent projects include: Highland Ranch Golf Course, Glen Eagles Golf Course in Denver, CO, Greenbelts for the Colorado Highway Department, Stellar Plaza in downtown Denver, Denver University and Clayton Colleges, Colorado State Capitol Complex and the Washington Monument in Washington, DC. Call today for a free brochure. (303) 790-2708.

VALVE SWITCH

Now you can add a valve without another wire with the Doubler, a four inch long, 2 1/2 inch in diameter switch that lets you control two automatic valves with only one valve wire and the common.

Developed by Transitional Systems Mfg. Co, the Doubler has just four wires. By connecting it to one station of your controller, the Doubler switches when the station is turned on and passes the current to the first valve. The next time that station is turned on, it switches to the second valve. This allows you to use one wire twice.

Rated to last 50,000 operation minutes, the 24 volt AC, 60 cycle, 9VA Doubler has a 30 Amp switching capacity and can work in temperatures ranging from -40F to +140F.
