

**Tell these guys to keep off the grass  
and somebody's going to be teed off.**

Naturally, you want to keep the course open as much as possible. But there are those times when you have to close sections of the course to reseed or overseed.

Now there's a way to cut your down time. Reseed or overseed with Nutri-Kote® Plus Apron® coated seeds.

Nutri-Kote Plus Apron coated seeds control Pythium and other seedling

APRON is a registered trademark of CIBA-GEIGY.

diseases. Turf establishment is faster, especially for bermudagrass, bentgrass, turf-type fescues and perennial ryegrass. There's more lush green leaf growth. Better root development. And seeds that stay where you want them at planting.

For economy you can't beat Nutri-Kote Plus Apron. Applications are easier to monitor. It attracts moisture during germination. Fertilizer and fungicide use is more efficient. And quicker establishment means less down time and loss of revenue.

When it's time to reseed or overseed, depend on Nutri-Kote Plus Apron coated seeds for fast, reliable, economical stands. Then the only thing golfers will have to tee off on is the ball.
