Aerator

The Ryan Tracaire helps you alleviate compaction problems that result from constant heavy use and seasonal changes on fairways, athletic fields, parks and many other large turf areas. Mount the Tracaire on any tractor with a category "1" three-point hitch. It covers a 6-foot aerating width with its coring, slicing or deep-spoon tines. A drag mat can be used for breaking up cores while you aerate.

Robson Named Territory Manager

Dave Robson

dealer relations in Colorado, Utah, Idaho Wyoming, Montana, Washington, Oregon and western Canada.

A native of England, Robson joined the parent company, Ransomes plc of England, in 1990 as a market support manager. Drawing on more than 20 years of experience in the service and vehicle-maintenance field, he introduced the American market to the company's line of Supreme reel blade and bedknife grinders. In 1992, he joined the U.S. affiliate in the same capacity.

Environmental Benefits of Turf 2nd in Poll

A recent Gallup survey sponsored by the Professional Lawn Care Association of America (PLCAA) reveals that homeowners rank the aesthetic qualities of lawns over the environmental benefits.

PLCAA, the voice of the industry, cites recent initiatives as examples that its pro-active stance makes a difference. Efforts by the PLCAA contributed to Rep. William F. Clinger's (R-PA) addition of the positive benefits of turf to a recent congressional hearing. During hearings on HR 3948, which re-authorizes the Clean Water Act, Clinger asked that the hearing record include that Congress, "considers the possibility of encouraging, as a cost-efficient means of trapping and purifying groundwater, well-maintained turfgrass and sod..."

The PLCAA will soon launch a major "Benefits of Turf" public-awareness campaign. Lawn and landscape professionals can lend their support to strengthen the industry and bolster job security by joining the association or distributing its literature, such as *Grasscycling Guide*, to their customers and communities.

For more information, call (800) 458-3466, or Fax (404) 578-6071.

Toasting "The General"

Key management team members toast the groundbreaking of "The General," the challenging championship golf course at Eagle Ridge Resort near Galena, IL. The course was named in honor of Ulysses S. Grant, Union general and 18th President of the United States. Photographed are: (left to right) Bob Steele, vice president of Paul Clute & Associates golf course builder; Robert W.

Graunke, director of grounds; Roger B. Packard, golf course architect; Andy North, two-time U.S. Open champion and golf course architect; Joe Duellman, president of Eagle Ridge; W. Paul LeGreco, Galena businessman and Gen. Grant character actor; Paul Clute, president of Paul Clute & Associates; John J. Schlaman III, director of golf; and John Osmanski, general manager.

Certification Program Reinstated in Florida

The Florida Turfgrass Association announces the reinstatement of the Certification Program with the release of FLoraTeX® grass. The new grass is available only through certified growers in Florida and Texas, beginning in late 1994.

The major goal of this program is to guarantee the genetic purity of the grass. Its success and distribution under the Certification Program will eventually generate new grasses to be released by the FTGA using the same methods.

The program will not produce false bermudagrass by any grower because of a strict inspection program backed by the Florida Department of Agriculture and Consumer Services Division of the Agriculture Environmental Services and divisions of the Plant Industry. The monitoring of the fields will include checking for off-types, noxious weeds and other pests. Any unapproved grower who claims to be a certified grower will be prosecuted to the fullest extent of the law.

Stahl Promoted by Scotts

Richard B. Stahl was recently promoted to senior vice president of The Scotts Company.

Stahl joined Scotts in 1967. As senior vice president, he will search out new technologies, products and opportunities for Scotts. He will continue to serve as Scotts' representative in RISE, NACA, and the GCSAA.

Genetics Finding

Eight years after researchers discovered that they could protect plants from disease by inserting genes from plant viruses into them, scientists at Michigan State University have found that the practice may pose a greater risk to the environment than previously known.

Dr. Richard F. Allison, a plant molecular virologist, and graduate student Ann E. Greene reported in the journal *Science* that pieces of virus that have been inserted through genetic engineering can combine with a newly-introduced virus to make a new virus.

The process is similar to one that can occur naturally when a plant is infected with more than one virus.

The two researchers showed that this process occurred in four of 125 plants they tested, a rate of genetic recombination much higher than previously reported. This could lead to new, and perhaps more virulent, plant viruses.

Two New Manuals

There are two new manuals out to help keep mowers and other power equipment running in peak condition.

The first manual discusses the service, repair and maintenance of Briggs & Stratton L-head engines, while the second covers Tecumseh L-head engines. Of particular importance is the troubleshooting section of each manual.

For more information, contact Intertec Publishing Corp., Overland Park, KS.

ROOKIES

Field Liner

The new Top Liner athletic field marker brings full hydrostatic drive control to the job of lining baseball, football, soccer and track fields.

The striping system employs a 30-gallon tank—enough to stripe three football fields. The tank contains a constant-agitation unit that keeps paint completely mixed at all times. The TeeJet stainless-steel nozzle lays down lines from 2 to 5 inches wide and is easily adjustable.

Power is supplied by a 9-hp Kawasaki gasoline engine, with an electric start, and has ground speed up to six mph. A hand throttle controls speed, forward and reverse. The tires are wide and low pressure, to provide soft traction and protect the turf.

SMITHCO

Circle 137 on Postage Free Card

Multi-Purpose Field Applicator

This Model 220 topdresser has the capability to apply seed, fertilizer, chemicals, sand, peat or other soil amendments. It will meter, mix and topdress four applications at once. This model also has a built-in stacking conveyor to stockpile different mixes for renovations, divot mixes, etc.

DAKOTA BLENDER

Circle 141 on Postage Free Card

Tractors

The new Grand L Series tractors have 24.5 to 36 PTO horsepower, and are designed to deliver top performance for utility and turf applications.

The tractors are equipped with hydrostatic steering, shuttle transmission and shift-on-the-go for optimal comfort and ease of operation. Transmission choices are the new glide-shift transmission or a fully-synchronized main-and-shuttle transmission.

Available in either two- or four-wheel drive, the tractors offer eight forward and eight reverse speeds, standard. Some models feature a semi-independent mid-PTO. Independent rear PTO is standard on select models.

Literature Offer

The installation of a new drainage system on a soccer field at Mills College in Oakland, CA is the subject of an application brief available from Contech Construction Products Inc.

Winter rainfalls and summer irrigation caused pools of water and soggy turf that resulted in hazardous playing conditions. After reviewing several subsurface drain options, college officials and the field's architect selected the TerraFlow 100 drainage system for the field.

The system consists of 7,500 feet of 6-inch pipe and 170 feet of 6-inch smooth-wall pipe. Three 6-inch trunk pipe drains were connected to the system to discharge all collected groundwater into existing storm drain sewers.

CONTECH CONSTRUCTION PRODUCTS INC.

Circle 142 on Postage Free Card

Perennial Ryegrass

Cutter, a variety of perennial ryegrass introduced last year, was ranked number one out of 123 entries in mean turfgrass quality. This is according to the 1993 NTEP ratings.

Cutter scored well in a wide range of categories, including turf color, drought tolerance and Pythium resistance. It is a "high-endophyte" perennial ryegrass naturally resistant to leaf- and crown-feeding insects. It is also well adapted to hot, humid summers. It is available from quality seed suppliers throughout the U.S. and directly from the manufacturer in Canada.

PICKSEED WEST

Circle 139 on Postage Free Card

All-In-One Seeder

This overseeder cuts the soil, opens the groove, sows the seed and closes the groove, all in one simple operation. It will even space as close as 1.5 inches. The treated area can be used right away. There are six models available, which sow from 6 to 16 inches deep.

VERTI-SEED

Circle 140 on Postage Free Card

Conditioning System

The Drag King features a unique three-section component design that combines the grooming capabilities of conventional hand-pulled mats with the field-conditioning capabilities of units costing much more.

Pulled by hand without weights, base lines and infields are quickly groomed to a "ready-to-play" state. Use any standard lawn and garden tractor, add weights to the ballast boxes, lower the reversible scarifier/planing blades for up to a 1-inch-deep cut, which will bring your field back to "like new."

Turf Grids

Tough Stuff for Sports Turf

The TurfGrid system is patented, simple, logical and long overdue. It combines specially designed synthetic fibers into the natural grass field and increases the shear strength of the playing surface by 100%. This means sure footing and safety with less divots and injuries...just what good teams expect from their playing surface. From football to baseball, to soccer, to polo, to golf, TurfGrids can replace or upgrade any surface.

Portable Blenders

What kind of machine can the golf or sports turf manager use that will do the work of many machines as well as minimize the number of applications for the concerning compaction problems on sports turf and golf greens?

The Dakota Topdresser, Model 220, has the capability of applying seed, fertilizers, chemicals, sand, peat or other soil amendments. It will meter, mix, topdress four of these products in one application. Also, the Model 220 has a built-in stacking conveyor to stockpile different mixes for renovations, divot mixes, etc.

The Model 220 gives turf managers the freedom of choice to select the materials they choose, and can save on the cost of soil mix and applications.

ROOKIES

Overseeder

This auto-seeder is a self-propelled machine for rapid overseeding of small areas, such as soccer goal mouths and centers, golf tees, etc. The blades, rotating against the direction of travel, cut shallow grooves 2 inches apart. Seed is placed into the grooves simultaneously.

Seeding rates can be set between 3/10 to 8/10 of an ounce per square yard for normal grass seed and creeping and colonial bents.

SISIS EQUIPMENT

Circle 144 on Postage Free Card

Utility Vehicle

The Yamahauler features an elongated steel frame fortified with channel-over-tube design and a heavy-duty, wrap-around front steel bumper to protect against impact damage. Also included are front and rear shock-absorber towers. There also is a special suspension that enhances the vehicle's long-term reliability.

It has a dual-purpose design that enables both box and flat-bed applications from a single, convertible vehicle. The drop-side utility box permits almost immediate removal of both sides and tailgate for flat-bed hauling. The 4 x 4-foot bed has 13.4 cubic feet of space and a 500-pound capacity. Vehicle capacity is one-half ton.

YAMAHA USA

Perennial Ryegrass

Shining Star, a new turf-type perennial ryegrass, was developed by Dr. Bill Myer out of the Pure Seed Testing Program.

The new turf is distinguished by its resistance uniformity, early maturity, stem-rust resistance, leaf-spot resistance, and especially its dark green color. It also exhibits excellent seed yield capability. Certified production fields are planted in the Willamette Valley of Oregon for 1994 sales.

PENNINGTON SEED

Circle 145 on Postage Free Card

Secure Controller Enclosure

The redesigned LA Max includes features such as: the premier paint system in the industry; louvers with screen and water shield for better ventilation; cambered top to ensure water runoff; three-point latching mechanism will

accommodate standard padlocks; stainless steel, full-length door hinge; and standard mounting back panel and breakaway mounting pad. It is available in seven standard sizes. Custom sizes are also available.

CROSS BROS. INC.

Turf Covers

Turf Armor protects stadium turf during concerts, such as the Pink Floyd concert at Oakland Coliseum. Light green, polyester fibers let air and sunshine in! Heat-welded on one side for extra strength. Available in rolls up to 20 feet wide, Turf Armor also makes batting-practice covers and reinforced football bench tarps.

PARTAC/BEAM CLAY

Circle 149 on Postage Free Card

Durable Turf

It's a combination of small pieces of mesh, a free-draining rootzone material and natural grass. It provides a sports surface that can sustain more frequent use than ordinary turf.

Research at Texas A&M University by Dr. Jim Beard in the late 1980s drew attention to the inherent ability of the turf to resist compaction and damage, which is unique to the Netlon system. This ensures the turf remains healthy, and infiltration rates are maintained—courtesy of the mesh that creates voids within the rootzone.

NETLON LIMITED

Circle 147 on Postage Free Card

Grass Seeders

Two new models of Turfmaker Grass Seeders are available from Brillion. Box size was increased to more than four bushels per box. A simplified drive system allows for seeding rates up to 50 percent greater than other models. A heavier drawbar and frame was designed for use in more rugged conditions.

The seeders are available in an 8-foot lift-type or an 8-foot hydraulic-transport model. Options include an S-tine track-remover kit and deep front wheels for deeper placement of certain grass seeds.

BRILLION IRON WORKS

Circle 150 on Postage Free Card

ROOKIES

Longer Lasting Paint Lines

Kromer Company's hydraulic cutter and painter lowers the painted line to below the normal grass surface, so mowing will not remove the painted lines. The lines also last longer on the shorter grass. There is less grass to cover, so the paint coat is heavier. For practice use, the paint may be eliminated or saved as the cut line in the grass is very clear and distinct.

KROMER COMPANY

Circle 151 on Postage Free Card

Shoe Replacement

Gandy Company introduces a shoe-replacement assembly for its overseeder. Independent spring-loaded shoes follow in the slit created by the cutter blades, and adjust for minor changes in ground contour. Seed placement directly behind each shoe permits more seed—more than 95 percent—to be placed directly into the slit for more seed-to-soil contact.

This unit also can be ordered as a dethatcher only. Also available are spreaders, seeders, rollers, core aerators and field groomers.

GANDY COMPANY

Circle 152 on Postage Free Card

Installation Machines

As part of its unique in-soil water management system, HydroGrowth Technology Inc. has developed a series of four installation machines. All are intended for use in a variety of applications, including athletic complexes.

These subsurface injection machines are designed for polymer installations into existing or newly-sodded turf, as well as preseeded installations. The machines were specifically developed to permit economical spreading of polymer granules throughout the rootzone at a depth of 2 to 6 inches. They also provide topsoil aeration with no significant disturbance to the grass.

HYDROGROWTH TECHNOLOGY INC.

Circle 153 on Postage Free Card

New Varieties

Six new grass-seed varieties are available from Olsen-Fennell Seeds Inc. Among the new seeds are four tall fescues and two perennial ryegrasses.

The Palisades Tall Fescue creates a turf that should excel in any environment. It features a rich, deep, dark-green color and refined leaf texture. Dense upright growth habit forms a carpet-like sod. It has excellent disease resistance.

Imagine Perennial Ryegrass forms a turf that will rival the finest elite Kentucky bluegrass varieties. It is pest-resistant and has a dwarf growth habit—which means up to 50 percent less mowing when compared to many performance leaders.
