

ISI discovers the secret to superior bermudagrass turf

Hot or cold? North or South? What's the right bermudagrass for your unique needs?

International Seeds has found the answer for any situation with Mirage and Pyramid seeded bermudagrasses.

Mirage is cold tolerant and especially adapted to the more temperate, northern regions while Pyramid's aggressive stoloniferous growth habit make it ideal for warmer, southern climates.

Moderately dark green in color, Mirage gives you improved turf quality, winter survival, early spring greenup and strong, durable sod.

Pyramid is slightly darker green. It also has a distinctively fine leaf texture – finer than many of the other new seeded bermudagrasses. Sowing Pyramid results in a very dense, uniform sod that performs beautifully in full sun.

Using domestic and international sources, both Mirage and Pyramid are derived from the latest plant breeding technology and have performed well in recent turf trials.

Search no further for answers to your tricky turf situations. With Mirage and Pyramid some turf management problems are a thing of the past.
