

French drains will fail but Multi-Flow delivers long term performance and at half the cost!

Old fashioned French drains are expensive, labor intensive, disruptive, and prone to premature failure. For about half the cost you can install a superior system. Multi-Flow, with its thick, needle-punched, polypropylene filter, encased in coarse sand will last and last and last!

Install Multi-Flow without select backfill, and you will have a quality drainage system with a life expectancy similar to that of a French drain for about half the cost and half the hassle. But add the optional select sand backfill to Multi-Flow, and you have a system with proven longevity.

Send drainage worries packing and enjoy superior performance and longer life at half the cost.
