

SOS® COOL SEASON TO THE RESCUE

Prior to Seeding with SOS® Cool Season

Four Weeks after Seeding with SOS® Cool Season

"We were especially pleased that we were able to do this so late in the year, with temperatures in the forties and fifties."

Ian Fulp, Director of Kodiak Parks and Recreation

SOS® Cool Season Saves Alaskan Sports Field in Just Four Weeks

With a very poor sports field on his hands at the beginning of the season, Ian Fulp, Director of Kodiak Parks and Recreation, was looking for a solution. In September Ian placed a call to Barenbrug who introduced him to the SOS Super Over Seeding Cool Season program. SOS Cool Season is designed to germinate at cooler temperatures and blend well into existing turf. The result: just four weeks after overseeding, with temperatures in the forties and fifties, Ian's field was play-ready. Turn to Barenbrug's SOS program to maintain winter turf quality with proven solutions. Go to barusa.com for the full story.
